Preface		xi
Acknowledgements		xiv
1	**Matrices and vectors**	**1**
1.1	Matrices$^{\diamond}$	1
1.2	Exercises	11
1.3	Vectors in $\mathbb{R}^2$	14
1.4	Exercises	20
1.5	Vectors in $\mathbb{R}^3$	21
1.6	Lines	24
1.7	Planes	27
1.8	Exercises	35
1.9	Vectors in $\mathbb{R}^n$	38
1.10	Flats	40
1.11	Exercises	43
1.12	Applications (optional)	45
1.12.1	Commodity bundles	45
1.12.2	Linear production models	46
1.12.3	Price vectors	46
1.12.4	Linear programming	47
1.12.5	Dual problem	48
1.12.6	Game theory	49
2	**Functions of one variable**	**51**
2.1	Intervals$^{\diamond}$	51
2.2	Real valued functions of one real variable$^{\diamond}$	51
2.3	Some elementary functions$^{\diamond}$	52
2.3.1	Power functions	52
2.3.2	Exponential functions	53
2.3.3	Trigonometric functions	53
2.4	Combinations of functions$^{\diamond}$	55
2.5	Inverse functions$^{\diamond}$	57
2.6	Inverses of the elementary functions$^{\diamond}$	59
2.6.1	Root functions	59
2.6.2	Exponential and logarithmic functions	60
2.7	Derivatives$^{\diamond}$	61
2.8	Existence of derivatives$^{\diamond}$	63
2.9	Derivatives of inverse functions$^{\diamond}$	64
2.10	Calculation of derivatives	65
2.10.1	Derivatives of elementary functions and their inverses	65
2.10.2	Derivatives of combinations of functions$^{\diamond}$	66

2.11 Exercises 69
2.12 Higher order derivatives 71
2.13 Taylor series for functions of one variable 72
2.14 Conic sections 76
2.15 Exercises 80

3 Functions of several variables **87**
3.1 Real valued functions of two variables 87
3.1.1 Linear and affine functions 88
3.1.2 Quadric surfaces 89
3.2 Partial derivatives 92
3.3 Tangent plane 96
3.4 Gradient 98
3.5 Derivative 100
3.6 Directional derivatives 100
3.7 Exercises 106
3.8 Functions of more than two variables 110
3.8.1 Tangent hyperplanes 111
3.8.2 Directional derivatives 114
3.9 Exercises 115
3.10 Applications (optional) 120
3.10.1 Indifference curves 120
3.10.2 Profit maximisation 122
3.10.3 Contract curve 122

4 Stationary points **125**
4.1 Stationary points for functions of one variable$^{\diamond}$ 125
4.2 Optimisation 128
4.3 Constrained optimisation 130
4.4 The use of computer systems 132
4.5 Exercises 135
4.6 Stationary points for functions of two variables 139
4.7 Gradient and stationary points 142
4.8 Stationary points for functions of more than two variables 143
4.9 Exercises 145

5 Vector functions **149**
5.1 Vector valued functions 149
5.2 Affine functions and flats 153
5.3 Derivatives of vector functions 155
5.4 Manipulation of vector derivatives 162
5.5 Chain rule 163
5.6 Second derivatives 168
5.7 Taylor series for scalar valued functions of n variables 170
5.8 Exercises 174

6 Optimisation of scalar valued functions **179**
6.1 Change of basis in quadratic forms$^{\diamond}$ 179
6.2 Positive and negative definite 185

6.3 Maxima and minima 188
6.4 Convex and concave functions 193
6.5 Exercises 200
6.6 Constrained optimisation 203
6.7 Constraints and gradients 208
6.8 Lagrange's method – optimisation with one constraint 210
6.9 Lagrange's method – general case♣ 217
6.10 Constrained optimisation – analytic criteria♣ 219
6.11 Exercises 220
6.12 Applications (optional) 223
6.12.1 The Nash bargaining problem 223
6.12.2 Inventory control 224
6.12.3 Least squares analysis 227
6.12.4 Kuhn–Tucker conditions 229
6.12.5 Linear programming 231
6.12.6 Saddle points 233

7 Inverse functions **235**
7.1 Local inverses of scalar valued functions 235
7.1.1 Differentiability of local inverse functions 237
7.1.2 Inverse trigonometric functions 238
7.2 Local inverses of vector valued functions 241
7.3 Coordinate systems 247
7.4 Polar coordinates 254
7.5 Differential operators♣ 256
7.6 Exercises 259
7.7 Application (optional): contract curve 263

8 Implicit functions **265**
8.1 Implicit differentiation 265
8.2 Implicit functions 266
8.3 Implicit function theorem 268
8.4 Exercises 275
8.5 Application (optional): shadow prices 277

9 Differentials **281**
9.1 Matrix algebra and linear systems◇ 281
9.2 Differentials 282
9.3 Stationary points 287
9.4 Small changes 289
9.5 Exercises 290
9.6 Application (optional): Slutsky equations 292

10 Sums and integrals **295**
10.1 Sums◇ 295
10.2 Integrals◇ 297
10.3 Fundamental theorem of calculus◇ 298
10.4 Notation◇ 300
10.5 Standard integrals◇ 302

10.6 Partial fractions◇ 304
10.7 Completing the square◇ 308
10.8 Change of variable◇ 309
10.9 Integration by parts◇ 311
10.10 Exercises 313
10.11 Infinite sums and integrals♣ 316
10.12 Dominated convergence♣ 320
10.13 Differentiating integrals♣ 323
10.14 Power series♣ 325
10.15 Exercises 326
10.16 Applications (optional) 328
10.16.1 Probability 328
10.16.2 Probability density functions 329
10.16.3 Binomial distribution 330
10.16.4 Poisson distribution 331
10.16.5 Mean 333
10.16.6 Variance 334
10.16.7 Standardised random variables 335
10.16.8 Normal distribution 336
10.16.9 Sums of random variables 339
10.16.10 Cauchy distribution 341
10.16.11 Auctions 341

11 Multiple integrals **345**
11.1 Introduction 345
11.2 Repeated integrals 347
11.3 Change of variable in multiple integrals♣ 353
11.4 Unbounded regions of integration♣ 360
11.5 Multiple sums and series♣ 361
11.6 Exercises 363
11.7 Applications (optional) 366
11.7.1 Joint probability distributions 366
11.7.2 Marginal probability distributions 366
11.7.3 Expectation, variance and covariance 367
11.7.4 Independent random variables 368
11.7.5 Generating functions 369
11.7.6 Multivariate normal distributions 370

12 Differential equations of order one **373**
12.1 Differential equations 373
12.2 General solutions of ordinary equations 374
12.3 Boundary conditions 375
12.4 Separable equations 375
12.5 Exact equations 382
12.6 Linear equations of order one 384
12.7 Homogeneous equations 387
12.8 Change of variable 389
12.9 Identifying the type of first order equation 392
12.10 Partial differential equations 393

12.11 Exact equations and partial differential equations 395
12.12 Change of variable in partial differential equations 397
12.13 Exercises 399

13 Complex numbers **405**
13.1 Quadratic equations 405
13.2 Complex numbers 406
13.3 Modulus and argument 407
13.4 Exercises 409
13.5 Complex roots 410
13.6 Polynomials 412
13.7 Elementary functions♣ 414
13.8 Exercises 416
13.9 Applications (optional) 417
13.9.1 Characteristic functions 417
13.9.2 Central limit theorem 419

14 Linear differential and difference equations **421**
14.1 The operator $P(D)$ 421
14.2 Difference equations and the shift operator E 423
14.3 Linear operators♣ 425
14.4 Homogeneous, linear, differential equations♣ 426
14.5 Complex roots of the auxiliary equation 429
14.6 Homogeneous, linear, difference equations 431
14.7 Nonhomogeneous equations♣ 434
14.7.1 Nonhomogeneous differential equations 435
14.7.2 Nonhomogeneous difference equations 441
14.8 Convergence and divergence♣ 444
14.9 Systems of linear equations♣ 447
14.10 Change of variable♣ 453
14.11 Exercises 454
14.12 The difference operator (optional)♣ 458
14.13 Exercises 461
14.14 Applications (optional) 462
14.14.1 Cobweb models 462
14.14.2 Gambler's ruin 467

Answers to starred exercises with some hints and solutions 471
Appendix 549
