

# Contents

<b>Preface</b> .....	v
<b>List of Contributors</b> .....	xv
<b>1 Milestones of Solar Conversion and Photovoltaics</b>	
<i>V. Petrova-Koch</i> .....	1
1.1 Prehistory .....	1
1.2 Milestones of Photovoltaics .....	1
<b>2 From Extraterrestrial to Terrestrial Applications</b>	
<i>G.F.X. Strobl, G. LaRoche, K.-D. Rasch, G. Hey</i> .....	7
2.1 Introduction .....	7
2.2 Solar Cells for Space .....	8
2.3 Closer to the Limit .....	10
2.3.1 Material Quality .....	11
2.3.2 Back Surface Reflector (BSR) .....	12
2.3.3 Back Surface Field (BSF) .....	12
2.3.4 The Violet Cell [10] .....	13
2.3.5 Textured Surfaces .....	13
2.3.6 Contacts .....	14
2.3.7 Bypass Function [13] .....	14
2.3.8 Surface Passivation .....	14
2.3.9 Low-Intensity, Low-Temperature Operation .....	14
2.3.10 Solar Cell Assembly .....	15
2.3.11 High Efficiency Solar Cells .....	15
2.4 Cost Reduction Measures .....	21
2.4.1 Silicon Production .....	21
2.4.2 Bulk Material .....	21
2.4.3 Cell Contacts .....	21
2.4.4 Encapsulation .....	22

2.5 Concentrating Systems – A New Opportunity for High Efficiency  
 Space Solar Cells ..... 22  
 References ..... 25

**3 PV Solar Electricity: From a Niche Market to One of the Most Important Mainstream Markets for Electricity**

*W. Hoffmann, L. Waldmann* ..... 29  
 3.1 General Overview ..... 29  
 3.2 PV Solar Electricity Market History ..... 31  
 3.3 Price and Competitiveness of PV Solar Electricity ..... 33  
 3.4 Future Market Development ..... 38  
 3.5 Technology Evolution ..... 39  
 References ..... 43

**4 Advanced Solar-Grade Si Material**

*K. Hesse* ..... 45  
 4.1 Introduction ..... 45  
 4.2 Production Pathways for Solar Silicon Feedstock ..... 45  
 4.2.1 Metallurgical Grade Silicon: Carbothermic Reduction of Silica as a Starting Point for Most Pathways ..... 45  
 4.2.2 Established Production Methods: Purification of Metallurgical Silicon via the “Silane Route” is Dominating ... 46  
 4.2.3 Differences in Using TCS or Silane as Feedstock ..... 47  
 4.2.4 Accommodation of the Processes to the PV Requirements ... 50  
 4.2.5 The Myths of the “High-Energy/High-Cost” Rating of Established Silane-Based Polysilicon Deposition Technologies ..... 52  
 4.2.6 Alternative Technologies for the Production of Solar-Grade Feedstock: Purification of Metallurgical Silicon via Melt Treatment/Crystallization is Dominating ..... 53  
 4.2.7 Alternative Vapor-Phase Deposition Technologies? ..... 53  
 4.2.8 Time to Market ..... 53  
 4.3 Summary ..... 53  
 References ..... 54

**5 EFG Ribbon Technology**

*I.A. Schwirtlich* ..... 55  
 5.1 Introduction ..... 55  
 5.2 EFG process ..... 55

**6 A Novel High-Efficiency Rear-Contact Solar Cell with Bifacial Sensitivity**

*R. Hezel* ..... 65  
 6.1 Introduction ..... 65  
 6.2 Structure of the Bifacial Rear-Contact Solar Cell ..... 67

6.3 High-Efficiency and Low-Cost Production Features . . . . . 68

6.4 Inherent Passivation of the Base Contacts . . . . . 69

6.5 Processing Sequence . . . . . 70

6.6 Production Technology . . . . . 71

    6.6.1 Back-Surface Grooving . . . . . 71

    6.6.2 Metallization by Oblique Evaporation . . . . . 72

    6.6.3 Surface Passivation by PECVD Silicon Nitride . . . . . 75

    6.6.4 Interconnection Technology Based on Conductive Adhesives . . . . . 80

6.7 Cell Results . . . . . 81

6.8 Efficiency Perspectives . . . . . 82

6.9 Silicon Substrate Options . . . . . 84

6.10 Application of Bifacial Solar Cells . . . . . 86

    6.10.1 General Applications of Bifacial Flat Panels . . . . . 86

    6.10.2 Integration of Bifacial PV Modules in Low-Cost Concentrating Systems . . . . . 87

    6.10.3 Multifunctional Bifacial PV Elements . . . . . 88

6.11 Conclusions . . . . . 90

    References . . . . . 91

**7 Commercial High-Efficiency Silicon Solar Cells**

*R. Hezel* . . . . . 95

    7.1 Introduction . . . . . 95

    7.2 The Point-Contact Solar Cell . . . . . 95

    7.3 The HIT Solar Cell . . . . . 97

    7.4 The Buried-Contact Solar Cell . . . . . 98

    References . . . . . 99

**8 III–V Solar Cells and Concentrator Arrays**

*Z.I. Alferov, V.M. Andreev, V.D. Rumyantsev* . . . . . 101

    8.1 Introduction: Early History of Heterostructures and III–V Solar Cells . . . . . 101

    8.2 Single-Junction AlGaAs/GaAs Concentrator Solar Cells . . . . . 105

    8.3 Multijunction Solar Cells . . . . . 109

        8.3.1 GaInP/GaAs Dual-Junction Solar Cells . . . . . 110

        8.3.2 Hybrid Triple-Junction GaInP/GaAs–GaSb Monolithic/Mechanically Stacked Solar Cells . . . . . 114

        8.3.3 Monolithic GaInP/Ga(In)As/Ge Triple-Junction Solar Cells . . . . . 116

    8.4 Concentrator PV Modules and Installations with III–V Solar Cells . . . 120

        8.4.1 Concentrator Modules with Mini-lens Panels: Design and Fabrication . . . . . 124

        8.4.2 Outdoor Measurements of the Test Modules with Mini-lens Panels . . . . . 127

    8.5 Perspectives of the Efficiency Increase in III–V Solar Cells . . . . . 128

8.6 Conclusion ..... 132
References ..... 133

9 The Economic Perspective: Is Concentrator PV Capable of Breaking the Economic Barrier

E.W. Merkle, R. Tölle, M. Sturm ..... 143
9.1 Climate Change and Depletion of Fossil fuels ..... 143
9.1.1 Photovoltaic as Part of Global Energy Trends ..... 143
9.1.2 Growth Perspective of Photovoltaic ..... 144
9.2 Cost Reduction as the Major Target ..... 147
9.2.1 Cost Potentials of the Current Technologies ..... 147
9.2.2 Thin-Film PV in Comparison to Crystalline Silicon PV: Advantages in Price, Performance and Large Size ..... 148
9.2.3 CPV in Comparison to Crystalline Silicon Flat-Plate PV ..... 149
9.2.4 Conclusion: Cost Potential to Reach "Grid Parity" ..... 149
9.3 Meeting the Tremendous Growth Perspective ..... 151
9.3.1 Growth Beyond all Imagination ..... 151
9.3.2 Multi-GWp Capability ..... 151
9.3.3 The Market in 2030: Will There Be a Winning Technology? .. 153
9.4 Cost Barriers for Leaving the Niche ..... 153
9.4.1 Explosive Growth of PV – Low Rate of Innovation ..... 153
9.4.2 High Growth at High Price Levels – the Problem of a Subsidized Industry ..... 154
9.4.3 Solar Energy: Abundant Quantity but Low Density ..... 155
9.5 The Learning Curve of CPV: Quick or Slow ..... 155
9.5.1 Concentration on the Strength Factors ..... 155
9.5.2 Learning from the LED and Photonic Industries ..... 155
9.5.3 Solar\*Tec AG's Approach to CPV ..... 156
References ..... 158

10 Fluorescent Solar Energy Concentrators: Principle and Present State of Development

A. Goetzberger ..... 159
10.1 Principle ..... 159
10.2 Concentrator Stacks ..... 161
10.3 Light Guiding by Photonic Band Pass Mirrors ..... 163
10.4 Factors Determining Energy Efficiency of Fluorescent Concentrators ..... 164
10.5 Theoretical Limits of Concentration and Efficiency ..... 166
10.5.1 Limit of Concentration ..... 166
10.5.2 Limit of Efficiency ..... 167
10.6 Improvements of Basic Design ..... 168
10.6.1 Optical Concentrators at the Collector Output ..... 168
10.6.2 Combination of Fluorescent Collector with Large Area Si-Solar Cell ..... 168

10.6.3 Combination of Fluorescent Concentrator  
with Up-Conversion ..... 169

10.6.4 Combination of Collector Stack with Band Pass Mirror ..... 171

10.7 Experimental Results ..... 172

10.7.1 Results of the Initial Period ..... 172

10.7.2 Recent Experimental and Theoretical Work ..... 173

References ..... 175

**11 Hybrid Photovoltaic/Thermal Collector Based on a Luminescent Concentrator**

*V. Petrova-Koch, A. Goetzberger* ..... 177

11.1 Introduction ..... 177

11.2 PV/T Hybrid Collector Based on a Luminescent Concentrator ..... 178

11.3 Conclusions ..... 181

References ..... 181

**12 Installation Concept and Future Applications**

*O. Mayer* ..... 183

12.1 PV from the Customer Perspective ..... 183

12.2 PV Deployment Today ..... 186

12.2.1 Nondomestic Standalone Systems ..... 186

12.2.2 Domestic Standalone Systems ..... 187

12.2.3 Grid-Connected Central PV Systems ..... 188

12.2.4 Grid-Connected Decentral Systems ..... 189

12.3 PV Developments in the Future ..... 193

**13 Design Rules for Efficient Organic Solar Cells**

*Z. Zhu, D. Mühlbacher, M. Morana, M. Koppe, M.C. Scharber, D. Waller, G. Dennler, C.J. Brabec* ..... 195

13.1 Introduction ..... 195

13.2 Material Design Rules for Donors in Single-Junction Solar Cells ... 196

13.3 Toward Novel Polymeric Donors: Poly-Cyclic-Bridged-DiThieno Copolymers (PCPDT) ..... 200

13.3.1 Structural and Optical Properties of PCPDT ..... 201

13.3.2 Transport and Electrical Properties of PCPDT-BT ..... 203

13.4 Photovoltaic Performance of PCPDT-Based Solar Cells ..... 209

13.5 From Single-Junction to Multijunction Solar Cells ..... 215

13.6 Summary ..... 219

References ..... 220

**Index** ..... 223
