## PART I

### HISTORICAL REVIEW: BIRTH AND DEVELOPMENT OF THE GEOSYNCLINAL CONCEPT

<i>Chapter 2. The Birth of the Geosynclinal Concept</i> . . . . .	7
---	---

J. Hall (1859) . . . . .	7
--------------------------	---

J. D. Dana (1866, 1873) . . . . .	9
-----------------------------------	---

E. Haug (1900) . . . . .	12
--------------------------	----

Conclusions: The American and European conceptions of the geosyncline	17
---	----

<i>Chapter 3. The Attempts at Classification of Geosynclines</i> . . . . .	18
--	----

C. Schuchert (1923) . . . . .	18
-------------------------------	----

H. Stille (1913–1940) . . . . .	20
---------------------------------	----

The thickness of the sediments . . . . .	20
--	----

The facies of the sediments . . . . .	21
---------------------------------------	----

The problem of the folding . . . . .	21
--------------------------------------	----

The problem of the magmatic evolution and metamorphism . . . . .	23
--	----

The problem of the siting of geosynclines . . . . .	24
---	----

The orthogeosynclines are intracratonic . . . . .	24
---	----

The parageosynclines are intracratonic . . . . .	25
--	----

Conclusion . . . . .	25
----------------------	----

M. Kay (1942–1951) . . . . .	26
------------------------------	----

A. V. Peyve and V. M. Sinitzyn (1950) . . . . .	31
---	----

Primary geosynclines . . . . .	31
Secondary geosynclines . . . . .	32
Residual geosynclines . . . . .	33
Conclusion . . . . .	33
Conclusions . . . . .	33
Summary . . . . .	33
Terms . . . . .	35
Scale . . . . .	39
Classification . . . . .	40

## PART II

### THE GEOSYNCLINAL CONCEPT AS ILLUSTRATED BY THE MEDITERRANEAN CHAINS OF THE ALPINE CYCLE

<i>Chapter 4. The Hellenides</i> . . . . .	43
Introduction . . . . .	43
Palaeogeographical and structural framework . . . . .	44
Palaeogeographical evolution . . . . .	60
Upper Triassic . . . . .	60
Lower and Middle Lias . . . . .	60
Upper Lias . . . . .	60
Remaining Jurassic . . . . .	60
Latest Jurassic and earliest eo-Cretaceous . . . . .	61
Barremian–Aptian–Albian . . . . .	62
The Albian–Cenomanian transition . . . . .	62
Cenomanian–Turonian . . . . .	62
The Santonian–Campanian transition . . . . .	63
Maastrichtian . . . . .	63
Eocene . . . . .	63
The Middle Eocene–Upper Eocene transition . . . . .	63
Late Upper Eocene . . . . .	64
Oligocene . . . . .	64
Miocene . . . . .	65
Pliocene . . . . .	66
Conclusions . . . . .	66
 <i>Chapter 5. The Organizational or Structural Pattern of a Geosyncline</i> . . . .	 68
Introduction . . . . .	68

The simple (or elementary) geosyncline: the eu-miogeosyncline couple . . . . .	68
Complex geosynclines: divergent (centrifugal) and convergent (centripetal) symmetry . . . . .	73
Furrows, ridges, sial and sima . . . . .	80
 <i>Chapter 6. The Evolutionary Pattern of a Geosyncline . . . . .</i>	 82
Introduction . . . . .	82
The evolutionary pattern at the level of the furrow . . . . .	83
The generative stage . . . . .	83
The development stage . . . . .	83
The pre-flysch period, 83—The flysch period, 84	
The orogenic stage . . . . .	85
Conclusion . . . . .	85
The evolutionary pattern at the level of the elementary geosyncline . . . . .	85
The geosynclinal period . . . . .	88
The generative stage . . . . .	88
The development stage . . . . .	88
The pre-flysch period, 88—The flysch period, 90—The relationships between the pre-flysch period and the flysch period, 90	
The orogenic stage . . . . .	91
The Cretaceous orogenesis, 92—The Tertiary orogenesis, 93	
Conclusions . . . . .	95
The late-geosynclinal period . . . . .	96
Conclusion . . . . .	99
The post-geosynclinal period . . . . .	99
The evolutionary pattern at the level of the complex geosyncline . . . . .	101
 <i>Chapter 7. Conclusions . . . . .</i>	 104
Geosynclinal organization . . . . .	104
Geosynclinal evolution . . . . .	105

## PART III

## SOME CHARACTERISTICS OF GEOSYNCLINES AS ILLUSTRATED BY THE MEDITERRANEAN CHAINS OF THE ALPINE CYCLE

<i>Chapter 8. Geosynclinal Sedimentation . . . . .</i>	109
Thickness of geosynclinal sediments . . . . .	109

Period of maximum accumulation . . . . .	109
Site of maximum accumulation . . . . .	110
Geosynclinal facies . . . . .	112
The pre-flysch period . . . . .	112
General considerations . . . . .	112
Some sedimentary types of the pre-flysch period . . . . .	115
The radiolarites . . . . .	115
The problem of the radiolarian jaspers: the bathymetric hypothesis .	117
The radiolarite-greenstone association: the volcanic sedimentary hypothesis . . . . .	123
The ammonitico rosso facies . . . . .	126
The flysch period . . . . .	129
General considerations . . . . .	129
The flysch . . . . .	131
Sedimentary characteristics . . . . .	131
Palaeogeographical characteristics . . . . .	133
Flysch as the final phase of sedimentation, 133—The flysch as an orogenic facies, 134—Age of the flysch, 139—Conclusions, 141	
Geosynclinal subsidence . . . . .	141
Causes of subsidence . . . . .	142
Modality of subsidence . . . . .	143
<i>Chapter 9. Metamorphism and the Geosynclinal Concept . . . . .</i>	<i>145</i>
<i>Chapter 10. Igneous Activity and the Geosynclinal Concept . . . . .</i>	<i>149</i>
General considerations . . . . .	149
The ophiolites . . . . .	151
The ophiolitic suite . . . . .	152
Hypothesis of Steinmann . . . . .	155
Hypothesis of submarine volcanism . . . . .	155
The environment of the ophiolitic suite . . . . .	156
<i>Chapter 11. Geosynclinal Tectonics . . . . .</i>	<i>160</i>
General considerations . . . . .	160
Intracontinental chains . . . . .	161
Tectonic phenomena at the level of the basement . . . . .	161
Tectonic phenomena at the level of the sedimentary cover . . . . .	163
Conclusions . . . . .	164
Geosynclinal chains . . . . .	168

Geosynclinal structures . . . . .	168
The structure of the external miogeosynclinal zones . . . . .	168
The structure of the external miogeosynclinal furrows, 168—The structure of the external miogeosynclinal ridge, 170	
The structure of the internal eugeosynclinal zones . . . . .	171
The structure of the internal eugeosynclinal furrow, 171—The structure of the eugeanticlinal ridge, 172	
The example of the Mediterranean . . . . .	173
The external zones, 173—The internal zones, 174—Conclusion, 175	
The case of the Eastern Alps: longitudinal movements . . . . .	176
Conclusions . . . . .	179
Late-geosynclinal structures . . . . .	179
Post-geosynclinal structures . . . . .	181
Clarification of the term nappe . . . . .	182
Basement nappes . . . . .	183
Superficial nappes . . . . .	184
Thrusting and displacement . . . . .	186
Conclusions . . . . .	187
<i>Chapter 12. Geosynclinal Orogenesis (and Tectogenesis)</i> . . . . .	189
General considerations . . . . .	189
Geosynclinal orogenesis . . . . .	190
Geosynclinal orogenesis during the orogenic stage of the geosynclinal period	190
Geosynclinal orogenesis during the late-geosynclinal period . . . . .	192
Geosynclinal orogenesis during the post-geosynclinal period . . . . .	192
Some remarks on the concept of orogenic phase . . . . .	193
Geosynclinal tectogenesis . . . . .	194
The genesis of elementary structures . . . . .	194
Basement tectonics . . . . .	194
Superficial tectonics . . . . .	195
The concept of gravity flow, 195—Tectonics and morphology, 200	
The genesis of overall structures in geosynclinal chains . . . . .	204
Geosynclinal tectogenesis . . . . .	204
Tectogenesis of the Hellenides, 204—A generalization, 208—Conclusions, 211	
Late-geosynclinal tectogenesis . . . . .	213
Post-geosynclinal tectogenesis . . . . .	213
Longitudinal movements . . . . .	213
The problem of embryonic tectogenesis . . . . .	214
<i>Chapter 13. The Siting of Geosynclines</i> . . . . .	217
General considerations . . . . .	217

Geosynclinal migration . . . . .	218
The genesis of geosynclines . . . . .	219

#### PART IV

#### EXTENSION OF THE GEOSYNCLINAL CONCEPT IN THE ALPINE SENSE IN SPACE AND TIME

<i>Chapter 14. The Geosynclinal Concept and the Present Epoch . . . . .</i>	<i>229</i>
General considerations . . . . .	229
The post-geosynclinal period: the Mediterranean . . . . .	230
The late-geosynclinal period: the Sunda Islands . . . . .	230
The Sunda Islands . . . . .	230
The Hellenides compared with the Sunda Islands . . . . .	232
The geosynclinal period . . . . .	234
The orogenic or terminal stage . . . . .	234
The generative stage: the problem of certain Mediterranean troughs . . . . .	234
The problems of the Tyrrhenian trough and the Ionian trough . . . . .	234
The development stage . . . . .	236
The Atlantic coast of the North American continent . . . . .	237
 <i>Chapter 15. The Geosynclinal Concept and the Pre-Alpine Period. . . . .</i>	 <i>241</i>
The Hercynian (Variscan) chain in Europe . . . . .	241
General considerations . . . . .	241
The dimensional problem . . . . .	241
The problem of metamorphism and igneous activity . . . . .	242
The tectonic problem . . . . .	242
The geosynclinal period . . . . .	243
The Central European Cordillera . . . . .	243
The palaeogeography, 247—The tectonics, 255—The orogenesis, 257—The metamorphism, 258—Igneous activity, 259—Conclusions, 262	
The Iberian Meseta . . . . .	262
The Moroccan Meseta . . . . .	265
Conclusions . . . . .	265
The late-geosynclinal period . . . . .	266
The post-geosynclinal period . . . . .	268
Conclusions . . . . .	269
The Caledonian chain in Europe: Scandinavia . . . . .	271
General considerations . . . . .	271

Palaeogeography . . . . .	273
Tectonics . . . . .	273
The zone of the eastern facies . . . . .	273
The zone of the western facies . . . . .	274
Orogenesis . . . . .	274
Metamorphism . . . . .	275
Igneous activity . . . . .	275
Conclusions . . . . .	276
The Precambrian chain in Europe: Finland . . . . .	277

## PART V

## SYNTHESIS

<i>Chapter 16. General Conclusions</i> . . . . .	283
The geosynclinal pattern of organization . . . . .	283
Primary units . . . . .	283
Symmetry of primary units . . . . .	284
The geosynclinal pattern of evolution . . . . .	285
Comparison with older chains . . . . .	286
 <i>References</i> . . . . .	 289
 <i>Index</i> . . . . .	 311
