

CONTENTS

PREFACE	VII
CHAPTER 1. GEONOMY AND GEODYNAMICS	1
Introduction	1
The meaning of scientific models	3
The fabric of geonomy	5
Computerization and mathematization in geonomy	8
The ripening of some geodynamic ideas	13
References	19
CHAPTER 2. THE EVOLUTION OF THE ATLANTIC MEGA-UNDATION (causing the American continental drift)	21
General principles	21
The undations of the earth's surface	23
Classification of the undations	23
Growth and decline of mega-undations	24
Geodynamic reactions to mega-undations	27
The development of the Atlantic Mega-Undation	31
The Atlantic Mega-Undation (sensu lato)	31
Phase II: The North Atlantic Mega-Undation	34
Phase III: The Thulean Mega-Undation	38
Phase IV: The Arctic Mega-Undation	45
Conclusion	51
References	53
CHAPTER 3. THE EVOLUTION OF THE INDIAN OCEAN MEGA-UNDATION (causing the Indico-fugal spreading of Gondwana fragments)	57
Elaboration of the geomechanical model	57
Newtonian and Andradean viscosity	57
Geomechanic facts provided by reliable fault-plane solutions	58
The shifting crests of mega-undations	63
Stages of evolution of mega-undations	69
The development of the Indian Ocean Mega-Undation	72
The i0 phase	72
The iI phase	72
The pII phase	73
The iIII phase	73
The iIII phase; α centre	74
The iIII phase; β centre	76
The iIII phase; γ centre	76
The iIII phase; δ centre	77

Conclusion	78
References	79
CHAPTER 4. MEGA-UNDATIONS: A NEW MODEL FOR THE EARTH'S EVOLUTION	81
Introduction	81
The three main phases of the earth's evolution	82
Phase I	82
Phase II	85
Phase III	87
The relativistic concept of geodynamic evolution	90
The Alpine cycle of orogeny	92
The present structural features of the earth	106
Conclusion	116
References	116
CHAPTER 5. THE IMPORTANCE OF THE GEONOMIC DIMENSIONS FOR GEODYNAMIC CONCEPTS	123
Introduction	123
The parameter of length in geonomy	123
The parameter of time in geonomy	129
The physical and chemical character of the earth's "Stockwerke"	132
A model of the chain reactions of the earth's evolution	136
<i>G</i> zone	136
<i>F</i> zone	136
<i>E</i> zone	137
<i>E</i> zone	137
<i>D</i> zone	137
<i>C</i> zone	139
<i>B</i> zone	139
<i>A</i> zone	141
Concluding remarks	147
References	151
CHAPTER 6. THE ORIGIN AND EVOLUTION OF THE EARTH'S CRUST AND MAGMAS	153
Introduction	153
The problem of the origin of the sialic crust	153
Crustal formation according to "classical magmatism"	155
Crustal formation according to "neo-huttonism"	158
The problem of the origin of magmas	164
The origin of basaltic magmas	164
The origin of acid magmas	171
Transitions between continental and oceanic metabolism	175
General concept of the earth's evolution according to the undation theory	183
References	185

CHAPTER 7. THE ALPINE LOOP OF THE TETHYS ZONE	191
General structural trendlines of the Alpine mountain system	191
Mesotectonic processes inside the Mediterranean section of the Tethys belt	193
Megatectonic influences on the Mediterranean section of the Tethys belt	195
Conclusions	195
References	196
CHAPTER 8. GEODYNAMIC MODELS	197
Introduction	197
The model of global plate tectonics	198
The model of regional mantle diapirism	200
General pattern of the Alpine type orogenesis	200
Structural evolution of the central Mediterranean	212
Consequences of the Tyrrhenian test case	217
State and evolution of the earth's tectonic features	217
Geodynamics of some other orogenic arcs	229
The process of sea-floor spreading	237
Some theoretical scale considerations	249
Conclusion	251
References	252
INDEX	259
