Preface to the Russian Edition 1 Introduction to finite group theory 1 Main definitions 2 Lagrange's theorem. Normal subgroups and factor groups 3 Homomorphism theorems	vi 1 4 6 7 9
 Introduction to finite group theory Main definitions Lagrange's theorem. Normal subgroups and factor groups Homomorphism theorems 	1 4 6 7 9
 Main definitions	1 4 6 7 9
 Lagrange's theorem. Normal subgroups and factor groups Homomorphism theorems	4 6 7 9 10
3 Homomorphism theorems	6 7 9 10
1	7 9 10
4 Cayley's theorem	9 10
5 Double cosets	10
6 Actions of groups on sets	
7 Normalizers and centralizers. The centers of finite <i>p</i> -groups	12
8 Sylow's theorem	13
9 Direct products of groups	15
10 Finite simple groups	16
11 The simplicity of the alternating group A_n for $n \ge 5$	18
12 A ₅ as the rotation group of an icosahedron	19
13 A ₅ as the first noncyclic simple group	20
14 A ₅ as a projective special linear group	22
15 A theorem of Jordan and Dickson	23
16 Mathieu's group M_{22}	25
17 The Mathieu groups, Steiner systems and coding theory	32
18 Extension theory	35
19 Schur's theorem	37
20 The Higman–Sims group	39
2 Introduction to combinatorial group theory	45
1 Graphs and Cayley's graphs	45
2 Automorphisms of trees	50
3 Free groups	52
4 The fundamental group of a graph	56
5 Presentation of groups by generators and relations	58
6 Tietze transformations	60
7 A presentation of the group S_{-}	63
8 Trees and free groups	64
9 The rewriting process of Reidemeister-Schreier	69
10 Free products	71
11 Amalgamated free products	72

	12	Trees and amalgamated free products	74
	13	Action of the group $SL_2(\mathbb{Z})$ on the hyperbolic plane	76
	14	HNN extensions	81
	15	Trees and HNN extensions	84
	16	Graphs of groups and their fundamental groups	84
	17	The relationship between amalgamated products	
		and HNN extensions	87
	18	The structure of a group acting on a tree	88
	19	Kurosh's theorem	92
	20	Coverings of graphs	93
	21	S-graphs and subgroups of free groups	96
	22	Foldings	98
	23	The intersection of two subgroups of a free group	101
	24	Complexes	104
	25	Coverings of complexes	106
	26	Surfaces	109
	27	The theorem of Seifert and van Kampen	115
	28	Grushko's Theorem	115
	29	Hopfian groups and residually finite groups	117
	~~~
