
Contents

0. Introduction	9
0.1. Languages and Language Families	9
0.2. <i>Language Generating Devices</i>	12
0.3. Algorithms and Decidability	16
0.4. Seven Circumstances Where Context-Free Grammars Are Not Enough.	18
1. Three Types of Regulation: Matrix, Programmed, and Random Context Grammars	25
1.1. Definitions and Examples	25
1.2. The Generative Capacity	31
1.3. Fundamental Properties.	43
1.4. Leftmost Derivations	53
1.5. Special Cases	67
2. Other Grammars with Regulation	95
2.1. Prescribed Sequences	95
2.2. <i>Dependence on Previous Productions</i>	113
2.3. Context Conditions	121
2.4. Further Regulated Devices	129
2.5. Conclusions	146
3. Grammars of Finite Index	151
3.1. The Generative Power of Finite Index Grammars	151
3.2. Properties of Grammars and Languages of Finite Index	161
4. The Syntactic Complexity of Regulated Rewriting	170
4.1. Nonterminal Complexity. Comparison	171
4.2. Nonterminal Complexity. Families of Languages with Bounded Complexity	181
4.3. Further Complexity Measures	186
5. Pure Regulated Grammars and Languages and Their Codings	194
5.1. Hierarchy of Pure Regulated Languages	195
5.2. Codings of Pure Languages	209
6. Combined Regulations	217
6.1. Indian and Russian Parallel Versions of Regulated Grammars	217
6.2. Ordered Versions of Regulated Rewriting	223
6.3. Random Context Versions of Regulated Grammars	233
7. Some Special Problems	238
7.1. Automata Characterizations	238

7.2. Szilard Language of Regulated Grammars	241
7.3. Grammar Forms	245
8. Regulated L Systems	253
9. Applications of Regulated Rewriting	263
9.1. Relationships with Programming Languages	263
9.2. Regulated Rewriting and Petri Nets	266
9.3. Modelling of Economic Processes	271
9.4. Modelling Folklore Fairy-Tales, Dramatic, Musical and Visual Art Works	273
9.5. The Mappings Investigation	276
10. A Common Generalization: Selective Substitution Grammars	279
Bibliography	290
Notation Index	302
Subject Index	305
Author Index	307
