Preface ix

Acknowledgments xiii

List of Symbols xv

INTRODUCTION 1

I. SINGLE HOMOMORPHISMS ITERATED

1. Basics about D0L Systems 10
2. Basics about Locally Catenative Systems 20
3. Basics about Growth Functions 29

II. SINGLE FINITE SUBSTITUTIONS ITERATED

1. Basics about 0L and E0L Systems 43
2. Nonterminals versus Codings 62
3. Other Language-Defining Mechanisms 70
4. Combinatorial Properties of E0L Languages 83
5. Decision Problems 98
6. E0L Forms 104

III. RETURNING TO SINGLE ITERATED HOMOMORPHISMS

1. Equality Languages and Elementary Homomorphisms 121
2. The Decidability of the D0L Equivalence Problems 134
3. Equality Languages and Fixed Point Languages 144
4. Growth Functions: Characterization and Synthesis 154
5. D0L Forms 176

IV. SEVERAL HOMOMORPHISMS ITERATED

1. Basics about DT0L and EDT0L Systems 188
2. The Structure of Derivations in EPDT0L Systems 192
3. Combinatorial Properties of EDT0L Languages 202
4. Subword Complexity of DT0L Languages 206
5. Growth in DT0L Systems 214

V. SEVERAL FINITE SUBSTITUTIONS ITERATED

1. Basics about T0L and ET0L Systems 231
2. Combinatorial Properties of ET0L Languages 245
3. ET0L Systems of Finite Index 261

VI. OTHER TOPICS: AN OVERVIEW

1. IL Systems 280
2. Iteration Grammars 292
3. Machine Models 300
4. Complexity Considerations 310
5. Multidimensional L Systems 316

HISTORICAL AND BIBLIOGRAPHICAL REMARKS 337
