| List of contributors | ix |
| Preface | xi |
| Chapter 1 Introduction | 1 |
| 1.1 The origins of geological structures | 2 |
| 1.2 Division of geological structures | 3 |
| 1.3 Structural geology | 7 |
| 1.4 Types of crustal movements and tectogenesis | 9 |
| Chapter 2 Examples of geological structures | 13 |
| I The East African Rift System | 16 |
| (a) Outline of Geology | 19 |
| (b) Deep structure of Rift Valleys | 23 |
| (c) Break-up of the continental crust and the development of the rift systems | 27 |
| II The San Andreas Fault | 31 |
| The Great Californian Strike-slip fault | 31 |
| (a) Distribution and structure of the fault | 32 |
| (b) Fault movement in Tertiary and pre-Tertiary times | 36 |
| (c) Quaternary fault movements | 40 |
| (d) The San Andreas Fault as a plate boundary | 41 |
| III Fault block movements in Shandong Province, China | 44 |
| (a) The position of the Shandong geological province from the viewpoint of the tectonics of China | 45 |
| (b) Neotectonics of Tan-Lu fracture zone | 47 |
| (c) History of tectonic development prior to Tertiary | 52 |
| (d) Characteristics of the Shandong block movements | 54 |
| IV Thrust faulting in the Canadian Rockies | 56 |
| (a) Location of the Canadian Rockies | 57 |
| (b) The McConnell Thrust and the structure of the Canadian Rockies foothills | 58 |

| | | |
|------------------|--|------------|
| | (c) Shape of thrust planes and associated folded structures | 60 |
| | (d) Formation of the Canadian Rockies | 64 |
| V | Nappe structures in the Swiss Alps | 69 |
| | (a) The Glarus Overthrust and Helvetic nappes | 70 |
| | (b) The formation of nappe structures | 75 |
| VI | The Franciscan Formation and the Tectonic <i>Mélange</i> | 82 |
| | (a) The Franciscan Formation and metamorphism | 84 |
| | (b) The tectonic <i>mélange</i> | 87 |
| | (c) The Klamath-Sierra zone and Great Valley Formation | 92 |
| VII | The Canadian Shield and aulacogens | 95 |
| | (a) The geology of the northwest Canadian Shield | 96 |
| | (b) Coronation orogenic belt | 97 |
| | (c) Athapuscow aulacogen | 99 |
| | (d) Formation of aulacogens | 101 |
| VIII | Salt domes in the Gulf Coast | 106 |
| | (a) Weeks Island salt dome | 108 |
| | (b) The process of salt dome development | 112 |
| | (c) Distribution of salt domes | 116 |
| IX | Sudbury Astrobleme | 120 |
| | (a) The Sudbury Irruptive | 121 |
| | (b) Footwall rocks — shatter cones and brecciation | 122 |
| | (c) The Sudbury Irruptive and ore deposits | 125 |
| | (d) Hanging wall rocks — Onaping tuff | 126 |
| | (e) Interpretation based on the meteorite impact hypothesis | 127 |
| | (f) Impact craters and fossil impact craters | 130 |
| Chapter 3 | Joints, faults and stress fields | 135 |
| 3.1 | Mechanical conditions of fractures | 136 |
| 3.2 | Restoration of stress fields | 139 |
| | (a) The state of crustal stress and classification of faults | 139 |
| | (b) Conjugate faults and principal axes of stress | 141 |
| | (c) Minor faults analysis | 141 |
| | (d) Problems of minor faults analysis | 143 |
| 3.3 | The form of stress fields | 146 |
| | (a) Stress fields and fracturing due to horizontal compression | 148 |
| | (b) Stress fields and fracturing due to vertical displacement | 148 |
| | (c) Superposition of stress fields | 151 |

| | | |
|------------------|---|------------|
| 3.4 | The origins and stress fields of regional joints | 153 |
| Chapter 4 | Rock cleavage | 161 |
| 4.1 | Types of cleavage | 161 |
| | (a) Fracture cleavage | 163 |
| | (b) Slaty cleavage | 164 |
| | (c) Crenulation cleavage | 166 |
| 4.2 | The origins of slaty cleavage | 169 |
| | (a) Shearing hypothesis | 170 |
| | (b) Flattening hypothesis | 171 |
| | (c) Tectonic dewatering hypothesis | 171 |
| 4.3 | Strain analysis and slaty cleavage | 173 |
| | (a) Direction of strain ellipsoids and slaty cleavage | 174 |
| | (b) Deformation plots | 176 |
| | (c) Deformation plots and the formative processes of slaty cleavage | 180 |
| | (d) The progression of strain and period of slaty cleavage formation | 182 |
| 4.4 | Where slaty cleavage develops | 184 |
| | (a) Distribution of foliated structures in orogenic belts | 184 |
| | (b) Depth at the time of slaty cleavage development ... | 184 |
| | (c) Structural layer and slaty cleavage | 187 |
| Chapter 5 | Folds and folding | 191 |
| 5.1 | Fundamental types of folding | 194 |
| 5.2 | Single-layer folds | 197 |
| | (a) Mechanical theory | 197 |
| | (b) The existence of the dominant wavelength | 200 |
| | (c) Strain distributions and internal structures | 202 |
| | (d) Variation in layer thickness | 206 |
| 5.3 | Intrafolial folds | 209 |
| | (a) Internal buckling of anisotropic elastic bodies | 210 |
| | (b) Internal buckling of anisotropic viscous fluids | 213 |
| | (c) Finite element analysis of intrafolial folds | 215 |
| | (d) Intrafolial folds of Sambagawa crystalline schists ... | 216 |
| 5.4 | Kink bands and conjugate folds | 220 |
| | (a) Geometry and strain distribution | 221 |
| | (b) Mechanisms of kinking | 223 |
| | (c) The ambient conditions for kinking and folding | 226 |
| 5.5 | Folding of multilayered systems | 226 |
| 5.6 | Three-dimensional analysis of folding | 227 |
| 5.7 | Bending folds and drape folds | 231 |
| 5.8 | Effects of gravity on buckle folding | 235 |
| 5.9 | Diapir folds | 238 |

| | | |
|--------------------|--|-----|
| Chapter 6 | The flow of rocks | 245 |
| 6.1 | Tectonic flow and its characteristics | 245 |
| 6.2 | Creep and stress relaxation | 248 |
| 6.3 | Tectonic stress fields and the growth of folds | 251 |
| 6.4 | Mechanisms of boudin formation | 255 |
| Chapter 7 | Fractures and bedrock | 263 |
| 7.1 | Fractures and engineering geology | 264 |
| 7.2 | Discrete surfaces in bedrock | 265 |
| 7.3 | Changes in the physical properties of bedrock due to fractures | 266 |
| 7.4 | Methods of evaluating bedrock | 274 |
| | (a) Rock classification | 276 |
| | (b) Bedrock models | 281 |
| | (c) The stability of slopes | 283 |
| Appendix | Descriptive terms for geological structures | 289 |
| <i>Index</i> | | 301 |
