<i>Preface</i>	<i>page</i>	ix
<i>Acknowledgments</i>		xi
<hr/>		
<b>Chapter 1</b>	<b>Motivations and opportunities</b>	<b>1</b>
1.1	Earthquake hazards in southern California	2
1.2	Radar lineaments on Venus	9
1.3	Faulting in a North Sea hydrocarbon reservoir	11
1.4	Anticracks in southern France	16
1.5	Mountain building on the Colorado Plateau	20
1.6	Concluding remarks	24
<hr/>		
<b>Chapter 2</b>	<b>Structural mapping techniques and tools</b>	<b>25</b>
2.1	Geographic coordinates and map projections	27
2.2	Local coordinates and position vectors	34
2.3	Orientations of structural elements	52
2.4	Structural mapping using GPS technology	69
2.5	Concluding remarks	74
<hr/>		
<b>Chapter 3</b>	<b>Characterizing structures using differential geometry</b>	<b>75</b>
3.1	The concept and description of lineations	77
3.2	The concept and description of curved surfaces	91
3.3	Applications of differential geometry to structural geology	114
3.4	Concluding remarks	119
<hr/>		
<b>Chapter 4</b>	<b>Physical quantities, fields, dimensions, and scaling</b>	<b>120</b>
4.1	Physical quantities and the continuum	121
4.2	Physical dimensions and dimensional analysis	127
4.3	Dimensionless groups and the scaling of structural processes	132
4.4	Scaled laboratory models	143
4.5	Concluding remarks	150
<hr/>		
<b>Chapter 5</b>	<b>Deformation and flow</b>	<b>152</b>
5.1	Rock deformation: some observations and a simple description	154
5.2	Evolving geometry of a structure: kinematic models, velocity models, and deformation	158
5.3	Relation between deformation and velocity fields	168
5.4	Velocity fields: the instantaneous state of motion	177
5.5	General results	183
5.6	Concluding remarks	192

<b>Chapter 6</b>	<b>Force, traction, and stress</b>	194
6.1	Concepts of force and traction	196
6.2	Concept and analysis of stress	207
6.3	State of stress in the Earth	227
6.4	Concluding remarks	241
<b>Chapter 7</b>	<b>Conservation of mass and momentum</b>	243
7.1	Particle dynamics	245
7.2	Rigid-body dynamics and statics	248
7.3	Conservation of mass and momentum in a deformable continuum	260
7.4	Field equations for the elastic solid and viscous fluid	276
7.5	Concluding remarks	285
<b>Chapter 8</b>	<b>Elastic deformation</b>	287
8.1	Estimating rock properties from geological field tests	288
8.2	The idealized elastic material	292
8.3	Quasi-static displacement boundary value problems	299
8.4	Quasi-static traction boundary value problems	308
8.5	Elastic properties from laboratory and engineering field tests	319
8.6	Elastic heterogeneity and anisotropy	323
8.7	Concluding remarks	331
<b>Chapter 9</b>	<b>Brittle behavior</b>	333
9.1	Brittle deformation in the laboratory and in the field	334
9.2	Strength of laboratory samples	337
9.3	Brittle failure in a field of homogeneous stress	357
9.4	Brittle failure in a field of heterogeneous stress	364
9.5	Fracture propagation and fault growth	371
9.6	Concluding remarks	382
<b>Chapter 10</b>	<b>Viscous flow</b>	384
10.1	Rock deformation by viscous flow	385
10.2	Constitutive relations for isotropic viscous fluids	386
10.3	Plane and antiplane flow	388
10.4	Viscous flow in layers: mullions and folds	396
10.5	Flow of anisotropic viscous fluids	416
10.6	Concluding remarks	420
<b>Chapter 11</b>	<b>Rheological behavior</b>	421
11.1	Departures from linear viscous flow	422
11.2	Boudinage and the non-linear power-law fluid	423
11.3	Coupling of viscous flow and macroscopic diffusional transport	440

---

11.4 Continuum properties of composite materials	446
11.5 Anisotropic fluids and internal instability	450
11.6 Concluding remarks	455
<hr/>	
<b>Chapter 12</b>   Model development and methodology	456
12.1 Idealization of field observations	457
12.2 Selection of general boundary conditions	462
12.3 A methodology for the practice of structural geology	474
12.4 Concluding remarks	477
<i>References</i>	478
<i>Index</i>	497
