

CONTENTS

PART I INTRODUCTION	1	CHAPTER 1.	Sedimentology As An Adventure In Ideas	
			Sedimentology, the Birth of Modern Geology, and the Nineteenth Century's Great "Time Dilemma"	5
			Sedimentary Strata and the Geologic Time Scale	6
			Sedimentology and Actualism	9
			Interrelationships of Sedimentology and Other Scientific Disciplines	10
			Sedimentology and New Tools	18
			Sedimentology in Exploration for Natural Resources	19
			Modern Views of the Geologic Cycle	20
PART II SEDIMENTARY PARTICLES	23	CHAPTER 2.	Kinds of Sedimentary Particles	
			Group One: Solid Breakdown Products of Older Deposits: Terrigenous Particles	25
			Group Two: Particles That Are Not Solid Breakdown Products of Older Deposits	44
		CHAPTER 3.	Properties of Sedimentary Particles	
			Shapes of Sedimentary Particles	58
			Surface Textures of Sedimentary Particles	62
			Sizes of Sedimentary Particles	63
			Mass Properties of Sedimentary Particles	66
			Size Distributions of Populations of Particles	70
PART III SEDIMENTARY PROCESSES	83	CHAPTER 4.	Physical Processes. Dynamics of Moving Particles and Fluids	
			Concept of Shearing	85
			Gravity Shearing: Dynamic Dilatancy (Bagnold Effect)	87
			Layers	88
			Subaerial Gravity-Displaced Sediments	91
			Concepts of Fluid Mechanics	95
			Fluids and Particles	97
			Major Categories of Currents and the Features In Their Deposits	107
		CHAPTER 5.	Biological and Chemical Processes	
			Biological Processes	120
			Chemical Processes	131
		CHAPTER 6.	How Sediments Become Sedimentary Rocks	
			Introduction	144

		Carbonate Cementation	147
		Sandstone Cementation	158
PART IV	165	CHAPTER 7.	
CLASSIFYING, NAMING, AND HISTORICAL BACKGROUND OF SEDIMENTARY ROCKS		Classifying and Naming Sedimentary Rocks, With Emphasis on Historical and Genetic Aspects	
		Historical	167
		Descriptive and Genetic Classifications	169
		Classifying Sedimentary Rocks	170
		Classifying and Naming Intrabasinal Rocks	170
		Classifying and Naming Extrabasinal Rocks	187
		Classifying and Naming Pyroclastic Rocks	192
PART V	195	CHAPTER 8.	
MODERN SEDIMENTARY ENVIRONMENTS AND THEIR PRODUCTS IN THE ROCK RECORD		Nonmarine Environments, I	
		Introduction	199
		Deserts and Semiarid Environments; Modern and Ancient Deposits	200
		Fluvial Environments: Braided Streams; Modern and Ancient Deposits	219
		Fluvial Environments: Meandering Streams; Modern and Ancient Deposits	219
		Climatic Significance of Nonmarine Redbeds	234
		CHAPTER 9.	
		Nonmarine Environments, II	
		Introduction	237
		Lake Environments; Modern and Ancient Deposits	237
		Glacial Environments; Modern and Ancient Deposits	261
		CHAPTER 10.	
		Transitional Environments, I	
		Coastal Currents	270
		Transitional Environments Associated with the Mouths of Large Rivers	274
		Fans at the Sea Shore	302
		CHAPTER 11.	
		Transitional Environments, II	
		General Setting	307
		Barrier Complexes	308
		Peritidal Complexes	324
		CHAPTER 12.	
		Marine Environments and Their Products	
		Characteristics of Marine Environments	345
		Marine Depositional Environments, Modern and Ancient	363
		Marine Nondepositional Environments; Authigenic Sediments	399
		Characteristics of Marine Environments	400
PART VI	403	CHAPTER 13.	
ANALYZING THE STRATIGRAPHIC RECORD		Sequences, Lateral Relationships, Correlation, and Temporal Relations	
		Exposures and Borings	405
		Field Study of Exposed Strata	406
		Information About Subsurface Strata	416
		Sequences of Strata	425

	Organizing Strata Into Units	425
	Establishing Lateral Relationships	427
	Criteria of Time Equivalence	428
	Stratigraphic Synthesis	429
CHAPTER 14.	Sedimentary Strata and Tectonic Movements	
	Geophysical Models and Tectonic Theory	434
	Subsidence and Sedimentation	442
	Where Does Sedimentology Stand Today?	460
COMPLEMENT A.	Waves and Wave-Influenced Sediments: Zone of Shoaling Waves, Beaches, and Spits	
	Waves	464
	Sediments of Zone of Shoaling Waves	473
	Beaches	480
COMPLEMENT B.	Deltas	
	General Relationships	495
	Stratigraphic Patterns	501
COMPLEMENT C.	Subaqueous Gravity-Displacement Processes	
	Introduction	509
	Turbidity Currents	511
	Other Forms of Gravity-Powered Bottom-Following Sediment Movements	514
COMPLEMENT D.	Waters: Properties, Circulation, Evaporation	
	Some Properties of Water	521
	Circulation and Stagnation of Waters in Basins	528
COMPLEMENT E.	Tides and Peritidal Deposits	537
	GLOSSARY	554
	BIBLIOGRAPHY	577
	INDEX	769
