Vorbemerkungen zur Buchausgabe [zur idiographischen Betrachtungsweise; zur nomothetischen Betrachtungsweise; zum Konstruktivismus und zur Diskurs-Methode in der Sozialgeographie; zur Komplexitätstheorie].....	5
Preface.....	11
1. Introduction	16
2. Six levels of complexity.....	19
2.1 Simple movements and solida.....	20
2.1.0 Instead of an introduction: The textile factory as physical form.....	20
2.1.1 General considerations.....	21
2.1.1.1 Solidum and movement [forms; causal explanation; actions and movements; solida and movements].....	21
2.1.1.2 The model [laws of motion; the "Basic process"].....	23
For guidance.....	26
2.1.2 Other examples.....	27
2.1.2.0 Instead of an introduction: movements as seen by an artist.....	27
2.1.2.1 An example from the field of technology.....	28
2.1.2.2 Examples from geography [landforms; a settlement].....	29
2.1.3 Process sequences and systemic dimensions [numerical sequence; route diagram; systemic dimensions]	32
Outlook.....	34
2.2 Equilibrium process and equilibrium system.....	35
2.2.0 Instead of an introduction: The textile factory as a functioning plant	35
2.2.1 General considerations.....	37
2.2.1.1 System and process [functional explanation; action (movement) project; action projects and equilibrium process; larger equilibrium systems].....	37
2.2.1.2 The model [stages of equilibrium processes].....	41
For guidance.....	42
2.2.2 Other examples.....	44
2.2.2.0 Instead of an introduction: a movement project as seen by an artist.....	44
2.2.2.1 Homogeneous structures [landscapes; a farm in Germany; functional areas in a city]....	45
2.2.2.2 Linearly inclined structures [settlement of exiles and refugees in Niedersachsen (Germany); an alluvial fan]	49
2.2.2.3 Radial structures [activity in pueblo land; commuter catchment area; catchment area for retail trade; migrations].....	50
2.2.2.4 Ring structures [agricultural regions, model of Thünen; the city, model of Burgess].....	54
2.2.2.5 Isochrones.....	55
2.2.3 Process sequences and dominant systemic dimension [numerical sequence; the emergence code; route diagram; the dominant systemic dimension].....	56
Outlook.....	62
2.3 Flow process and flow equilibrium system.....	63
2.3.0 Instead of an introduction: The textile factory in the flow of energy.....	63

2.3.1	General considerations.....	66
2.3.1.1	System and process [large and small compartments; systemic explanation; 1 st process train (the internal hierarchy, bonding levels); 2 nd process train (feedback; oscillations; diffusion; rotation)].....	66
2.3.1.2	The model [1 st bonding level; 2 nd bonding level; 3 rd bonding level; 4 th bonding level; the course of the process].....	73
	For guidance	84
2.3.2	Other examples	85
2.3.2.0	Instead of an introduction: flow process as seen by artists	85
2.3.2.1	Vertical energy flow [the cultivation of a field; a complex ecosystem; a complex economic system, the Forrester feedback model; complex social systems; oscillations (predator- prey relation; business cycles; colonisation phases)].....	86
2.3.2.2	Horizontal processes [processes of spreading (diffusion; the model of Artificial Society; processes of spreading in ecosystems); rotation (irregular rotation; tangential rotation)].....	93
2.3.3	Process sequences and dominant systemic dimensions [numerical sequence; route diagram; the dominant systemic dimensions].....	101
	Outlook.....	103
2.4	Conversion process and non-equilibrium system	105
2.4.0	Instead of an introduction: The textile factory as an organised unit.....	105
2.4.1	General considerations	107
2.4.1.1	System and process [products and division of labour; structure conserving and structure changing processes; process explanation].....	107
2.4.1.2	The model [1 st process train; transition from the 1 st to the 2 nd process train; 2 nd process train (main process; task processes; control processes; elementary processes; reaction process); course of the processes (process sequence as an entirety, structure of the process course: demand-supply-relation and twin processes)].....	108
	For guidance.....	125
2.4.2	Other examples	127
2.4.2.0	Instead of an introduction: conversion process and non-equilibrium system as seen by an artist.....	127
2.4.2.1	Example of a complex conversion process: the cultural evolution in Europe since 1800 [about the method of the investigation; the material stage (painting in the Romantic period; philosophy; geography); the functional stage (Impressionist painting; philosophy; geography); the system stage (Classical Modern painting; philosophy and interdisciplinary theories; geography); the process stage (evolving) (art in the Present; philosophy and interdisciplinary theories; geography); summary and interpretation (process development; interpretation of content; the processes in the superior context)	128
2.4.2.2	Examples of non-equilibrium systems [a technical system; organic and inorganic non-equilibrium systems; individuals as elements and as non-equilibrium systems; city-umland system; time maps]	158
2.4.3	Process sequences and dominant systemic dimensions [numerical sequence; route diagram; the dominant systemic dimensions]	167
	Outlook.....	170
2.5	Hierarchy processes and hierarchy systems.....	171
2.5.0	Instead of an introduction: The textile factory as a member of mankind as society.....	171
2.5.1	General considerations.....	172
2.5.1.0	Introduction.....	172

2.5.1.1	System and process [the catalogue of tasks and institutions, the populations as carriers; the hierarchy of processes; the hierarchy of subsystems (introduction; specification hierarchy; scalar hierarchy; secondary order-obedience relationship, upper and lower levels); the hierarchy of spaces (spaces occupied by the populations themselves; areas of influence of populations)].....	173
2.5.1.2	The model	186
	For guidance	188
2.5.2	Other examples	190
2.5.2.0	Instead of an introduction: hierarchy as seen by an artist.....	190
2.5.2.1	Hierarchy of the systems [hierarchy of the living world; central place hierarchies; rank-size-rule].....	191
2.5.2.2	Hierarchy of processes: the cultural evolution [millennium rhythm; centennial rhythm; decennial rhythm; several years' rhythm; yearly rhythm; monthly or weekly rhythm]	196
2.5.3	Process sequences and dominant systemic dimension [numerical sequence; route diagram; the dominant systemic dimension].....	202
	Outlook.....	204
2.6	Autopoietic processes and universal system	205
2.6.0	Instead of an introduction: The employees of the textile factory in their life spheres....	205
2.6.1	General considerations	207
2.6.1.0	Introduction: About the shaping of materially defined spaces.....	207
2.6.1.1	Living organisms [autopoietic systems; genetic expression, some considerations].....	207
2.6.1.2	The behaviour of populations [an Indian population in its habitat (oscillations; rotation); processes of spreading (land occupation and colonisation; colonisation by the Spanish in New Mexico), migration (the importance of socio-economic differentiation; country-to-town migration in New Mexico)].....	211
2.6.1.3	The mankind as a population [the age structure of the population; distribution of the global population; adjustment of the population to its living space].....	218
	For guidance.....	222
2.6.2	The spheres of the universe.....	224
2.6.2.0	Instead of an introduction: the universe as seen by an artist.....	224
2.6.2.1	The individual spheres from the viewpoint of the mesocosmos [biosphere, the ecosystem; chemical and molecular spheres; planetary sphere and sphere of ions; solar sphere and sphere of atoms].....	225
2.6.2.2	The sphere model (based on extrapolation) [general considerations; about the tasks; about the hierarchy; about the arrangement of the spheres].....	231
2.6.3	Process sequences and dominant systemic dimension (preliminary considerations) [numerical sequences; route diagram; the dominant systemic dimension].....	235
3.	Emergence.....	239
3.1	Introduction.....	239
3.1.1	About the term "emergence".....	239
3.1.2	Summary of the sections 2.1 – 2.6.....	240
3.2	Emergence process.....	244
3.2.1	Emergence and systemic dimensions.....	244
3.2.2	Course of the processes.....	246
3.2.3	Hierarchy of the processes and systems.....	247
3.2.4	Folding of the processes and systems.....	249

Epilogue [Decision 1: the social world is the medium of investigation; decision 2: the structured process is the path of investigation; decision 3: the intertwining of the flows of information and energy is the aim of investigation; decision 4: the mesocosmos forms the framework for investigation].....	251
References.....	254
Notes on the figures.....	267
Glossary.....	274
Index.....	283
