<i>Chapter 1.</i> INTRODUCTION	
K.H. Wolf and G.V. Chilingarian	1
Introductory remarks	1
Summary	5
Chapter 2 — Nucleation, growth and dissolution of crystals during sedimentogenesis and diagenesis, by Ichiro Sunagawa	5
Chapter 3 — Early diagenetic deformation structure in the overburden of Bełchatów Brown Coal Mine (Central Poland), by A.J. Van Loon and K. Brodzikowski	8
Chapter 4 — Development of diagenetic differential structure through reaction–transport feedback, by P. Ortoleva	9
Chapter 5 — Stability fields of smectites and illites including glauconites as a function of temperature and chemical composition, by Y. Tardy and J. Duplay	9
Chapter 6 — Formation of alternating chalk–siderite units during the Neogene in the Black Sea — an example of climatic control of early diagenetic processes, by Björn Bahrig	10
Chapter 7 — Formation of stylolites, marl/limestone alterations, and dissolution (clay) seams by unstable chemical compaction of argillaceous carbonates, by T. Dewers and P. Ortoleva	11
Chapter 8 — Morphochemical and replacement diagenesis of biogenic carbonates, by U. Brand	12
Chapter 9 — Multiple dolomitization of the Warsaw and Salem formations (Middle Mississippian), western flank of the Illinois Basin: textural, trace elemental and isotopic signatures of four types of dolomite — a case study, by D.P. Bhattacharyya and M.R. Seely	13
Chapter 10 — Diagenesis of organic matter, by A. Hollerbach and J. Dehmer	13
Chapter 11 — Postdiagenetic ferruginization of sedimentary rocks (sandstones, oolitic ironstones, kaolins and bauxites), including a comparative study of the reddening of red beds, by Arno Mücke	14
Chapter 12 — Diagenetic processes associated with plant roots and microorganisms in karst terrains of the Cayman Islands, British West Indies, by Brian Jones	15
Chapter 13 — Paleokarst (dissolution diagenesis): its occurrence and hydrocarbon exploration significance, by V.P. Wright and P.L. Smart	16
References	17
<i>Chapter 2.</i> NUCLEATION, GROWTH AND DISSOLUTION OF CRYSTALS DURING SEDIMENTOGENESIS AND DIAGENESIS	
I. Sunagawa	19
Introduction	19
Crystal growth in different phases	19
Problems in verifying the growth mechanism of crystals	24
Nucleation	26
Mass transfer and the effect of gravity and solution flow	28
Interface roughness and growth mechanism	33
Morphology	35

Aggregation of crystals; texture formation	39
Growth of crystals in diagenetic environment	40
Dissolution	41
Conclusions	43
Acknowledgements	44
Bibliography and references	44
<i>Chapter 3.</i> EARLY-DIAGENETIC DEFORMATION STRUCTURES IN THE OVERBURDEN OF THE BEŁCHATÓW BROWN-COAL MINE (CENTRAL POLAND): A PREDICTIVE TOOL REGARDING ENGINEERING–GEOLOGICAL CONDITIONS DURING EXPLOITATION A.J. van Loon and K. Brodzikowski	49
Introduction	49
Types of deformation structures	51
Synsedimentary and metasedimentary deformation structures	55
Cryogenic structures	61
Glaciotectonic structures	63
Bioturbations	64
Deformations resulting from gravity-induced surficial mass movements	64
Early-diagenetic deformations induced by endogenic activity	65
Polygenetic deformations	65
Development of the structures influencing mining conditions	68
Endogenic activity	68
Glaciotectonism	69
Polygenetic diapirism	70
Conclusions with respect to the mining conditions in the graben	72
Acknowledgements	74
References	74
<i>Chapter 4.</i> DEVELOPMENT OF DIAGENETIC DIFFERENTIATED STRUCTURE THROUGH REACTION–TRANSPORT FEEDBACK P. Ortoleva	79
Introduction: self-organization and reaction–transport feedback	79
Oscillatory intracrystal zoning	80
Surface-attachment kinetic mediated growth from aqueous solution	80
Unstable solid–solid replacement fronts	81
Patterning through nucleation and ripening processes	82
Liesegang banding: Ostwald–Prager theory	82
Unstable coarsening	83
Mechanochemical feedback	84
Low-porosity rocks	85
Porous rocks	86
Reaction front morphological instability	87
Self-focusing flow	87
Diagenetic reaction fronts	87
Reaction mediated, buoyancy driven advection	88
Basin compartments and their non-linear dynamics	89
Conclusions	91
Acknowledgements	92
References	92

<i>Chapter 5.</i>	STABILITY FIELDS OF SMECTITES AND ILLITES INCLUDING GLAUCONITES AS A FUNCTION OF TEMPERATURE AND CHEMICAL COMPOSITION	
	Y. Tardy and J. Duplay	95
Introduction		95
Difficulties of defining clay mineral stabilities		95
Stability field of smectites		96
Aluminous montmorillonite		96
Four major smectite stages of weathering and sedimentation: nontronite, beidellite, montmorillonite, and stevensite		99
Stability fields of illites		103
Smectite/illite mixed layers considered as two separate smectite and illite phases		106
Physical mixtures of smectite and illite particles		106
Montmorillonite/illite stability diagrams		107
Interlayer energies		109
Stability of monomineralic clay particle populations		109
Ideal solid-solution model of a large number of end-members		116
Contribution of different end-members depending on temperature and chemical composition ..		119
Local equilibria in populations of microsystems		124
Conclusions		125
Acknowledgements		127
References		127
<i>Chapter 6.</i>	THE FORMATION OF ALTERNATING CHALK/SIDERITE UNITS DURING THE NEOGENE IN THE BLACK SEA — AN EXAMPLE OF CLIMATIC CONTROL OF EARLY DIAGENETIC PROCESSES	
	B. Bahrig	133
Introduction		133
Methods		134
Sediments and paleoenvironmental data		135
General		135
Chemical sediments		139
Occurrence and characteristics of siderite		139
Stable isotope data of siderite and calcite		140
Siderite formation and early diagenetic conditions		142
General model for the formation of the chalk and siderite units		147
Acknowledgements		150
References		151
<i>Chapter 7.</i>	FORMATION OF STYLOLITES, MARL/LIMESTONE ALTERNATIONS, AND DISSOLUTION (CLAY) SEAMS BY UNSTABLE CHEMICAL COMPACTION OF ARGILLACEOUS CARBONATES	
	T. Dewers and P. Ortoleva	155
Introduction and examples		155
Reaction–transport–mechanical models		162
Textural model and conservation of mass equations		162
Equations for macroscopic effective stress and force balance		166
Calcite reaction rates: mechanisms and driving forces		167
Boundary conditions and other constraints		172
Thermodynamics and kinetics of calcite–water reaction		174
Speciation and linear dependency of concentrations		174
Corrections to carbonate equilibria due to fluid pressure, ionic strength, and p_{CO_2}		175

Inhibition of free-face rates due to solute inhibitors and grain coatings	178
Numerical simulations	179
Styololitization in relatively clean limestones	181
Marl/limestone alternations in argillaceous carbonates	188
Dissolution (clay) seams in low-porosity, clay-rich carbonates	206
Changes in timing and length scale accompanying burial	210
Conclusions and directions for future study	211
Acknowledgements	213
References	213
<i>Chapter 8.</i> MORPHOCHEMICAL AND REPLACEMENT DIAGENESIS OF BIOGENIC CARBONATES	
U. Brand	217
Introduction	217
Basic principles	218
Mineralogy	219
Microstructures	221
Trace elements	223
Cathode luminescence	225
Stable isotopes	225
Radiogenic isotopes	227
Depositional controls	229
Growth/precipitation rate	229
Osmotic equilibrium	230
Redox potential	233
Diagenetic controls	234
Solubility	234
Hydrologic regime(s)	237
Water/rock ratio	238
Morphochemical diagenesis	242
Aragonite–calcite transformation	242
High-Mg calcite–calcite transformation	248
Intermediate-Mg calcite–calcite transformation	253
Low-Mg calcite–calcite transformation	255
Summary	259
Replacement diagenesis	261
Pyritization	261
Silicification	264
Phosphatization	267
Dolomitization	270
Summary	274
General summary	274
Acknowledgements	275
References	275
<i>Chapter 9.</i> MULTIPLE DOLOMITIZATION OF THE WARSAW AND SALEM FORMATIONS (MIDDLE MISSISSIPPIAN), WESTERN FLANK OF THE ILLINOIS BASIN: TEXTURAL, TRACE ELEMENTAL, AND ISOTOPIC SIGNATURES OF FOUR TYPES OF DOLOMITE — A CASE STUDY	
D.P. Bhattacharyya and M.R. Seely	283
Introduction	283
Methods of study	284
Geological setting	285

Lithofacies and depositional history	286
Dolomites	289
Chemistry of the dolomite types	293
Major and trace elements	293
Isotopes	295
Dolomitization	296
Discussion	301
Conclusions	305
Acknowledgements	305
References	306
<i>Chapter 10. DIAGENESIS OF ORGANIC MATTER</i>	
A. Hollerbach and J. Dehmer	309
Introduction	309
Biochemical decomposition of organic matter	309
Organic substances in recent sediments	311
Lipophilic substances	312
Hydrocarbons	312
Oxygenated compounds	317
Terpenoid compounds	325
Steroids	333
Chlorophyll	340
Carbohydrates	341
Amino acids and proteins	345
Complex biopolymers	347
Cutin and suberin	347
Lignin	348
Formation of humic substances	350
Conclusions	353
Acknowledgements	353
Bibliography and references	353
<i>Chapter 11. PART I. POSTDIAGENETIC FERRUGINIZATION OF SEDIMENTARY ROCKS (SANDSTONES, OOLITIC IRONSTONES, KAOLINS AND BAUXITES) — INCLUDING A COMPARATIVE STUDY OF THE REDDENING OF RED BEDS</i>	
A. Mücke	361
Introduction	361
A comparative study of the reddening of red beds	362
Continental red beds	362
Models of red-bed formation	370
Final considerations and conclusion	381
The ferruginization model of red beds (Bahariya oasis, Western Desert, Egypt)	382
Occurrence of iron layers	382
Geological setting	382
Petrographic characteristics of barren sandstone	386
Petrographic characteristics of ferruginized sandstones	386
Origin of iron layers	389
Comparison of different types of iron layers	391
Geochemical analyses	392
Sequences of events and age relationships	393
Discussion and comparison with other models	393

**PART II. POSTDIAGENETIC FERRUGINIZATION OF PHANEROZOIC
(OOLITIC) IRONSTONES: A CONTRIBUTION TO THEIR GENESSES**

Introduction	396
Development of oolitic ironstone: sedimentation and diagenesis	397
Ferruginization of oolitic ironstone	400
Ferruginization of cement	400
Ferruginization of ooids	403
Ferruginization of kaolin and bauxite	410
Summary and conclusions — in context with red beds	416
Phanerozoic ironstone or SCOS-IF?	417
Acknowledgements	418
References	419
<i>Chapter 12.</i> DIAGENETIC PROCESSES ASSOCIATED WITH PLANT ROOTS AND MICROORGANISMS IN KARST TERRAINS OF THE CAYMAN ISLANDS, BRITISH WEST INDIES	
B. Jones	425
Introduction	425
Geology of the Cayman Islands	425
General climatic conditions of the Cayman Islands	426
Experimental data	427
Destructive processes	427
Constructive processes	430
Microorganisms and diagenetic fabrics in the karst terrains of the Cayman Islands	432
Surface weathering	432
Caves	437
Karst breccia	443
Rhizoliths	449
Root borings	455
Identification of microorganisms	457
General comments	457
Microorganisms in Cayman samples	460
Calcification of microorganisms	461
Specificity of calcification	461
Sites of calcification	461
Timing of calcification	462
Calcification patterns	462
Crystal composition	465
Destruction of substrates by etching	465
Relationships between constructive and destructive processes	467
Factors controlling behavior of microorganisms	467
Conclusions	469
Acknowledgements	470
References	470
<i>Chapter 13.</i> PALEOKARST (DISSOLUTION DIAGENESIS): ITS OCCURRENCE AND HYDROCARBON EXPLORATION SIGNIFICANCE	
V.P. Wright and P.L. Smart	477
Introduction	477
Sites of major dissolution diagenesis	478
Meteoric system	479
Marine mixing system	482
Deep burial fluid karstification	484

Paleokarst — terminology and concepts	485
Subjacent paleokarst	485
Polyphase karstification and paleokarsts	487
Subsurface recognition	491
Controlling factors on karst development	493
Paleokarst and paleoclimates	493
Secondary porosity and temporal changes in carbonate mineralogy	495
Sea-level changes and paleokarsts	496
Paleokarst associations	501
Reefs and karst	502
Paleokarst and evaporites	503
Paleokarst at platform/shelf margins	503
Paleokarsts in extensional tectonic regimes	505
Paleokarst and foreland basins	506
Problematic paleokarsts	507
“Mammillated” paleokarstic surfaces	507
Rubble and fissure paleokarst	510
Summary	512
Acknowledgements	513
References	513
Subject Index	519
