Pr	Preface Introduction: Problems of Graph Theory		
Int			
	Path Problems	1	
	Coloring Problems	2	
	Isomorphic Graphs	4	
	Planar Graphs	4	
	Disjoint Paths	5	
	Shortest Paths	6	
	and More	7	
A	Basic Concepts	9	
	Equivalent Graphs	9	
	Multigraphs	10	
	Directed Graphs and Mixed Graphs	11	
	Complete Graphs	11	
	Cycle Graphs	11	
	Paths in a Graph	11	
	Open and Closed Paths; Cycles	12	
	Subgraphs	13	
	The Complement of a Graph	13	
	Degrees of Vertices	13	
	The Degree Sequence of a Graph	14	
	Regular Graphs	15	
	Connected and Disconnected Graphs	15	
	Components of a Graph	15	
	More Problems	16	
B	Isomorphic Graphs	21	
	More Problems	23	

С	Bipartite Graphs Complete Bipartite Graphs Bipartite Graphs and Matrices Cycles in a Bipartite Graph Cycle Theorem for Bipartite Graphs Proof of the Cycle Theorem More Problems	25 26 26 27 27 28 29
D	Trees and Forests Pruning a Tree Directed Trees Spanning Trees Counting Spanning Trees Codewords for Trees: Prufer's Method More Problems	31 32 33 34 34 35 36
Е	Spanning Tree AlgorithmsConstructing Spanning TreesWeighted GraphsMinimal Spanning TreesPrim's AlgorithmTables for Prim's AlgorithmThe Reduction AlgorithmSpanning Trees and Shortest PathsMinimal Paths in a Weighted GraphMinimal Path Algorithm, first attemptMinimal Path Algorithm, revisedTables for Dijkstra's AlgorithmMinimal Paths in a Directed GraphMinimal Paths in a Directed GraphMore Problems	41 41 41 42 42 43 43 44 45 45 46 46 48 51
F	Euler Paths The Königsberg Bridge Problem Euler Paths in Directed Graphs and Directed Multigraphs Application of Euler Paths: State diagrams, DeBruijn sequences, and rotating wheels More Problems	57 57 59 60 61
G	Hamilton Paths and Cycles Some Negative Tests Positive Tests for Hamilton Cycles Some Proofs More Problems	65 65 67 70 73
H	Planar GraphsRegions Formed by a Plane DiagramProof that K5 is Non-Planar, Using Euler's Formula	77 78 80

	Non-Planar Graphs and Kuratowski's Theorem	81 83
I	Independence and Covering	85
-	The Independence Numbers of a Graph	85
	A Graph Game	88
	Covering Sets and Covering Numbers	89
	More Problems	91
J	Connections and Obstructions	95
	Internally Disjoint Paths	95
	Edge-Disjoint Paths	95
	Path Connection Numbers	96
	Blocking Sets	96
	k-Connected Graphs	98
	Vertex Cut Sets and Vertex Cut Numbers	99
	More Problems	100
K	Vertex Coloring	103
	The Vertex Coloring Number of a Graph	103
	Vertex Coloring Theorems	104
	Map Coloring	110
	More Problems	111
L	Edge Coloring	119
	The Edge Coloring Number of a Graph	119
	Edge Coloring of Complete Graphs	120
	Edge Coloring of Bipartite Graphs	122
	Edge Color Switch	122
	Proof of Edge Coloring Theorem #3	123
	Application of Edge Coloring: the Scheduling Problem	124
	More Problems	124
M	Matching Theory for Bipartite Graphs	131
	The Max/Min Principle	132
	Proof of the König–Egervary Theorem	133
	The Colored Digraph Construction	133
	Matching Extension Algorithm	135
	Proof of the Colored Digraph Theorem	135
	Matrix Interpretation of the König–Egervary Theorem	136
	Hall's Theorem and Its Consequences	138 139
	More Problems	
N	Applications of Matching Theory	143
	Sets and Representatives	143
	Latin Squares	144
	Permutation Matrices	145

	The Optimal Assignment Problem	146 149	
0	Cycle-Free Digraphs Chains and Antichains Chain Decompositions Proof of Dilworth's Theorem More Problems	153 153 154 156 158	
Р	Network Flow Theory Flows in a Network Cuts and Capacities More Problems	161 161 169 172	
Q	Flow Problems with Lower Bounds The Supply and Demand Problem More Problems	175 175 184	
Ans	Answers to Selected Problems
