Preface.....	VII
1 Polymeric Materials	1
1.1 Introduction to Plastic Materials	1
1.1.1 Beginning of Plastics	1
1.1.2 Polymer Families	3
1.2 Thermoplastic Polymers	4
1.2.1 Classification of Polymers by Performance.....	4
1.2.2 Molecular Structure of Plastic Materials	6
1.2.3 Acrylonitrile-Butadiene-Styrene (ABS).....	6
1.2.4 Acetal (POM, Polyacetal)	9
1.2.5 Polymethyl Metacrylate (Acrylic, PMMA)	12
1.2.6 High Temperature Nylon (HTN)	14
1.2.7 Ionomer Polymers	16
1.2.8 Liquid Crystal Polymer (LCP).....	18
1.2.9 Polyamide (PA, Nylon)	20
1.2.10 Polyetherimide (PEI).....	23
1.2.11 Polyarylate (PAR)	25
1.2.12 Polyetherether Ketone (PEEK).....	27
1.2.13 Polycarbonate (PC)	28
1.2.14 Modified Polyphenylene Oxide (PPO).....	31
1.2.15 Polybutylene Terephthalate (PBT)	33
1.2.16 Polyethylene Terephthalate (PET).....	34
1.2.17 Polyethylene (PE)	36
1.2.18 Polytetrafluoroethylene (PTFE)	39
1.2.19 Polyphenylene Sulfide (PPS)	44
1.2.20 Polypropylene (PP)	46
1.2.21 Polystyrene (PS)	48
1.2.22 Polysulfone (PSU)	49
1.2.23 Polyvinyl Chloride (PVC).....	51
1.2.24 Styrene Acrylonitrile (SAN)	53
1.3 Thermoplastic Elastomers (TPE).....	55
1.3.1 Thermoplastic Elastomer Families	56
1.3.2 Thermoplastic Polyurethane Elastomer (TPU)	57
1.3.3 Styrenic Block Copolymer (SBS).....	60
1.3.4 Polyolefin Thermoplastic Elastomer (TPO)	62
1.3.5 Elastomeric Alloy Thermoplastic Vulcanized (TPV)....	65
1.3.6 Melt Processible Rubber (MPR)	69
1.3.7 Copolyester Thermoplastic Elastomer	71
1.3.8 Polyamide Thermoplastic Elastomer	75
1.4 Liquid Injection Molding Silicone (LIM®)	77
1.4.1 LIM® Silicone Processing	79
1.5 Thermoset Polymers.....	82
1.5.1 Polyester Alkyd (PAK)	83
1.5.2 Diallyl Phthalate/Isophthalate (DAP, DAIP).....	85
1.5.3 Melamine Formaldehyde (MF)	87
1.5.4 Cellulosic Ester	88
1.5.5 Cyanate.....	89
1.5.6 Epoxy (EP).....	92
1.5.7 Phenol Formaldehyde (Phenolic, PF).....	94

1.5.8	Polybutadiene (PB)	97
1.5.9	Bismaleimide (BMI)	97
1.5.10	Unsaturated Polyester (UP)	98
1.5.11	Polyimide (PI).....	101
1.5.12	Polyxylyene	103
1.5.13	Polyurethane (PUR).....	104
1.5.14	Silicone (SI)	107
1.5.15	Urethane Hybrid.....	109
1.5.16	Vinyl Ester (BPA)	111
2	Engineering Product Design	115
2.1	Understanding the Properties of Materials	115
2.1.1	Plastics Selection Guidelines	117
2.2	Structural Design of Thermoplastic Components	120
2.2.1	Stress-Strain Behavior	121
2.2.2	Tensile Testing of Viscoelastic Materials.....	122
2.3	Mechanical Properties of Materials.....	126
2.4	Tension and Compression Curves	129
2.5	Modulus of Elasticity (E).....	129
2.6	Stress and Strain Analysis	130
2.7	Thermoplastics Elastic Design Method	131
2.7.1	Working Stress.....	132
2.7.2	Compressive Stress.....	133
2.7.3	Flexural Stress	134
2.7.4	Coefficient of Linear Thermal Expansion (α)	135
2.7.5	Poisson's Ratio (ν)	136
2.7.6	Moisture Effects on Nylon	136
2.7.7	Effects of Temperature on the Behavior of Thermoplastics	137
2.8	Stress-Strain Recovery (Hysteresis)	138
2.8.1	Creep Behavior of Thermoplastics	138
2.8.2	Creep and Rupture Under Long-Term Load.....	139
2.8.3	Creep and Relaxation of Thermoplastics.....	139
2.9	Flexural Beam Stress Distribution	145
2.10	Viscoelastic Modulus Design Method.....	147
2.11	Centroid, Section Area, and Moment of Inertia	150
2.12	Radius of Gyration	158
2.13	Stress Analysis of Beams	158
2.13.1	Types of Loads.....	158
2.13.2	Normal Stresses in Beams.....	159
2.13.3	Shearing Force.....	164
2.14	Beam Deflection Analysis	168
2.14.1	Beam Deflection by Double Integration Method	169
2.14.2	Beam Deflection Moment Area Method	178
2.14.3	Applications of Moment Area and Double Integration Methods	179
2.14.4	Beam Deflection Superposition Method.....	183
2.15	Column Structural Analysis	188
2.15.1	Long Slender Column Critical Load (P_{Cr}).....	188
2.15.2	Column Slenderness Ratio (L / r)	188
2.15.3	Eccentrically Loaded Columns	188
2.16	Flat Circular Plates	194
2.16.1	Classification.....	195
2.16.2	Stress Analysis Methods	195

2.16.3	Flat Circular Plate Equations	196
2.16.4	Flat Circular Plate Stresses	197
2.16.5	Theory of Flexure Comparison	198
2.16.6	Circular Plates Simply Supported, Concentrated Center Load	198
2.16.7	Flat Circular Plate under Concentrated Center Load ..	199
2.16.8	Flat Circular Plate with Fixed Edge	199
2.16.9	Flat Circular Plate Compensation Factor for Deflection	200
2.16.10	Flat Circular Plate Bending under Edge Boundaries ...	200
2.17	Torsion Structural Analysis	207
3	Structural Designs for Thermoplastics	211
3.1	Uniform and Symmetrical Wall Thickness	211
3.1.1	Part Geometries Difficult to Mold	212
3.1.2	Wall Draft Angle per Side	213
3.2	Structural Rib Design	213
3.2.1	Rib Strength Analysis Method	215
3.3	Internal Sharp Corners and Notches	222
3.4	Injection Molded Thermoplastic Bosses	222
3.5	Injection Molded Thermoplastic Threads	224
3.6	Collapsible Core for Molding Internal Threads	224
3.7	Preferred Standard Thread Forms for Thermoplastics	225
3.7.1	Thermoplastic Threads Creep Effects	227
3.8	Injection Molded Products with Undercuts	227
3.9	Injection Molded Integral Life Hinges	232
3.9.1	Injection Molded Integral Life Hinge Design	233
3.9.2	Mold Design Considerations for Hinges	235
3.9.3	Proper Gate Design for Life Hinges	236
3.10	Conventional Types of Pin Hinges	237
3.11	Metal Inserts for Thermoplastic Encapsulation	239
3.11.1	Machined Metal Threaded Insert Tolerances	240
3.11.2	Thermoplastic Boss Wall Thickness for Metal Inserts ..	240
3.11.3	Press/Lock Slotted Metal Insert Installation After Molding	242
3.11.4	Cold Forged Metal Inserts for Encapsulation	243
3.11.5	Threaded Female Metal Inserts	244
3.11.6	Metal Inserts Anchorage for Thermoplastic Encapsulation	246
3.11.7	Metal Insert Encapsulating Process Problems	249
3.11.8	Special Metal Inserts Anchorage for Encapsulation ...	250
3.11.9	Electrical Lead Inserts for Encapsulation	253
3.11.10	Inserts Preparation for Molding Encapsulation	255
4	Thermoplastic Gearing Design	257
4.1	Classification of Gears	258
4.1.1	Gears Parallel to the Shaft Axis	258
4.1.2	Bevel Gears, Nonparallel and Intersecting Shafts	259
4.1.3	Hypoid Gears, Nonparallel and Nonintersecting Shafts	261
4.1.4	Gears for Straight Linear Motion	262
4.2	Standard Injection Molded Thermoplastic Gears	263
4.2.1	Selection of Thermoplastic Resins for Gears	264
4.2.2	Horsepower Equations for Gears	266

4.2.3	Spur Gear Terminology and Definitions	268
4.3	Properties Required for Injection Molded Thermoplastic Gears	272
4.4	Thermoplastic Spur Gear Design Requirements	273
4.4.1	Gating Effects on Thermoplastic Gear Roundness Dimensions	275
4.4.2	Multifunction Designs with Thermoplastic Gears.	277
4.4.3	Mounting Thermoplastic Gears on Metal Shafts	279
4.4.4	Standard Spur Gears, Equations, and Calculations	279
4.4.5	Spur Gear Pitch Backlash	281
4.4.6	Standard Spur Gear Tooth Size Selection	282
4.4.7	Standard Gear Total Composite Tolerances	283
4.5	Tolerances and Mold Shrinkage of Thermoplastic Gears	287
4.6	Standard Helical Gears	289
4.7	Standard Straight Bevel Gears	290
4.8	Standard Worm Gears	292
4.8.1	Standard Worm Gear Analysis	293
4.10	Plastic Gearing Technology Designs	294
4.10.1	Spur and Helical Gears PGT-1 Tooth Design	295
4.10.2	Spur and Helical Gears PGT-2 Tooth Design	297
4.10.3	Spur and Helical Gears PGT-3 Tooth Design	298
4.10.4	Spur and Helical Gears PGT-4 Tooth Design	299
4.10.5	Plastic Gearing Technology Tooth Form Design Variables	300
4.10.6	Maximum Allowable Outside Diameter D_O (Max.)	302
4.10.7	Spur Gear Tooth Form Comparison	303
4.10.8	Mating Spur Gears Tooth Form Comparison	304
4.10.9	PGT Spur Mating Gears Strength Balance	305
4.10.10	PGT Close Mesh Center Distance Between Spur Gears	308
4.10.11	Maximum Close Mesh Center Distance	309
4.11	PGT Helical Thermoplastic Gearing	314
4.11.1	PGT-1 Helical Mating Gears Strength Balance	319
4.11.2	PGT-1 Helical Mating Gears Center Distance	322
4.12	PGT Spur and Helical Gears Horsepower Rating	323
4.12.1	PGT Gear Horsepower Equation Basic Parameters	324
4.13	PGT Spur and Helical Gear Specifications	328
5	Plastic Journal Bearing Design	335
5.1	Introduction	335
5.2	Materials Used for Journal Bearings	335
5.2.1	Babbitt Journal Bearings	336
5.2.2	Bronze Journal Bearings	336
5.2.3	Sintered Porous Metal Journal Bearings	336
5.2.4	Plugged Bronze Journal Bearings	336
5.2.5	Carbon-Graphite Journal Bearings	337
5.2.6	Cast-iron Journal Bearings	337
5.2.7	Wooden Journal Bearings	337
5.2.8	Rubber Journal Bearings	337
5.2.9	Self-Lubricated Thermoplastic Journal Bearings	338
5.3	Hydrodynamics of Lubrication	339
5.4	Journal Bearings Design for Lubrication	342
5.5	Journal Bearing Design Principles	345
5.5.1	Journal Bearing Nomenclature and Equations	345

5.5.2	Thermoplastic Journal Bearing Axial Wall Thickness..	347
5.5.3	Mounting Thermoplastic Journal Bearings	347
5.6	Split Bushing Thermoplastic Journal Bearings	348
5.7	Self-Centering Thermoplastic Journal Bearings	348
5.8	Journal Bearing Load Carrying Contact Surface (<i>C</i>).....	350
5.9	Load Reaction Across the Length of Thermoplastic Bearing	350
5.10	Injection Molded Journal Bearings Process Defects.....	351
5.11	Factors Affecting Journal Bearing Performance	352
5.12	Factors Affecting Journal Bearing Dimensions	353
5.12.1	Length-to-Inside Diameter Ratio of Journal Bearings .	354
5.12.2	Types of Service and Motion of Journal Bearings	354
5.12.3	Thermoplastic Journal Bearing Annealing Effects.....	354
5.12.4	Acetal Homopolymer Moisture Absorption Effects ...	355
5.12.5	TFE and Nylon 6/6 Moisture Absorption Effects.....	355
5.12.6	Temperature Effects on Thermoplastic Journal Bearings	356
5.12.7	Thermal Effects on Thermoplastic Journal Bearing Clearances	357
5.13	Journal Bearing Pressure-Velocity (PV) Limits.....	358
5.13.1	Methods to Determine the PV Limits of Plastics.....	359
5.13.2	Journal Bearing Coefficient of Friction	359
5.13.3	Journal Bearing Failures Due to Small Clearances.....	360
5.13.4	Definition of Different Types of Wear	361
5.14	Mating Material Hardness and Surface Finishing.....	362
5.15	Self-Lubricated Thermoplastic Journal Bearings	363
5.15.1	Vespel® Polyimide Bearings	366
5.15.2	Journal Bearing Pressure Equation.....	367
5.15.3	Vespel® Wear Factor Effects Caused by Temperature ..	368
5.15.4	Vespel® Wear Transition Temperature	369
5.15.5	Frictional Behavior of Vespel®.....	369
5.15.6	Vespel® Journal Bearings Length to Inside Diameter Ratio	370
5.15.7	Vespel® Thrust Bearing Ratio Between Diameters	370
5.15.8	Vespel® Journal Bearing Initial Clearance (<i>c</i> ₁)	370
5.15.9	Vespel® Journal Bearing Inside Diameter (<i>d</i> _B).....	371
5.16	Teflon® (TFE) Fabric Composite Bearings	373
5.16.1	Bearing Physical Properties	374
5.16.2	Bearing PV Limit Rating.....	374
5.16.3	Journal Bearing Clearances (<i>c</i>)	375
5.17	Thermoplastic Kevlar® Reinforced Bearings	375

6	Thermoplastic Molded Spring Design	377
6.1	Introduction.....	377
6.2	Thermoplastic Molded Spring Design Considerations.....	378
6.3	Thermoplastic Helical Compression Springs	378
6.4	Thermoplastic Molded Cantilever Beam Springs.....	379
6.5	Cantilever Beam Spring Design Analysis	381
6.5.1	Initial Modulus of Elasticity Cantilever Beam Analysis Method	381
6.5.2	Stress-Strain Curve Cantilever Beam Analysis Method	381
6.5.3	Empirical Data Cantilever Spring Analysis Method ...	382
6.6	Thermoplastic Cantilever Spring Applications.....	385
6.7	Thermoplastic Belleville Spring Washers	388

6.7.1	Acetal Homopolymer Belleville Spring Washer Analysis.....	389
6.7.2	Belleville Spring Washer Loading Rate.....	392
6.7.3	Belleville Spring Washer Long-Term Loading Characteristics.....	392
7	Thermoplastic Pressure Vessel Design.....	393
7.1	Thermoplastic Thin-Walled Pressure Vessels	393
7.2	Thin-Walled Cylinder Basic Principles.....	394
7.3	Thick-Walled Pressure Vessels	396
7.3.1	Lame's Equation for Thick-Walled Cylinders.....	396
7.3.2	Maximum Stresses with Internal and External Pressures.....	398
7.3.3	Maximum Stresses for Internal Pressure Only	398
7.4	Designing Cylinders for Cost Reduction	400
7.5	Thermoplastic Pressure Vessels Design Guidelines	400
7.5.1	Preliminary Pressure Vessel Design.....	400
7.6	Testing Prototype Thermoplastic Pressure Vessels.....	402
7.6.1	Redesign and Retesting the Pressure Vessels	402
7.7	Pressure Vessel Regulations	402
7.7.1	ASME Pressure Vessel Code	403
8	Thermoplastic Assembly Methods	405
8.1	Introduction.....	405
8.2	Cold Heading Method	405
8.2.1	Cold Heading Procedure and Equipment	406
8.3	Electro Fusion Fitting System	408
8.3.1	The SEF-System	409
8.4	Hot Plate Welding Method	410
8.4.1	Hot Plate Welding Joint Design.....	412
8.4.2	Flash or Weld Bead	413
8.5	Solvent and Adhesive Bonding Methods	413
8.5.1	Solvents Used to Bond Thermoplastic Polymers	414
8.6	Adhesive Bonding Method	416
8.6.1	Adhesive Families	416
8.6.2	Adhesive Concerns	419
8.6.3	Adhesives Bonding Selection	420
8.6.4	Ultra Violet Curable Adhesives	421
8.6.5	Adhesive Surface Preparation.....	424
8.6.6	Adhesive Application and Curing Methods	425
8.6.7	Joint Design for Adhesive Bonding.....	425
8.7	Metal Fasteners Method.....	427
8.7.1	Thermoplastic Bosses and Self-Tapping Screws.....	429
8.7.2	Thread Forming and Thread Cutting Screws	430
8.8	Press Fitting Method.....	437
8.8.1	Press Fitting Interference	439
8.8.2	Circular Press Fitting Assembly Method	441
8.9	Snap Fitting Methods.....	444
8.9.1	Circular Undercut Snap Fitting Joints	445
8.9.2	Suggestions for Stripping Circular Undercut Snap Fitting	446
8.9.3	Cantilevered Latch Snap Fitting Joint.....	447
8.9.4	Cantilever Snap Fit Latch Design Guidelines	449
8.9.5	Cantilever Latch Snap Fit Mathematical Model.....	450

8.9.6	Cantilever Snap Latch Beam Permissible Deflection (δ)	452
8.9.7	Cantilever Latch Beam Assembly Force (W).....	453
8.9.8	Design and Material Considerations	454
8.9.9	Uniform Cross Section Cantilever Beam.....	454
8.9.10	Tapered Cross Section Cantilever Beam	455
8.10	Electromagnetic Welding Method	458
8.10.1	Electromagnetic Welding Process	459
8.10.2	Electromagnetic Welding Coil Design	460
8.10.3	Electromagnetic Welding Joint Design	463
8.10.4	Available Welding Gasket Shapes and Forms	464
8.11	Vibration Welding Method	465
8.11.1	High Frequency Vibration Welding	465
8.11.2	Vibration Welding Modes.....	466
8.11.3	Comparing Vibration Welding to Other Assembly Methods	469
8.11.4	Vibration Welding Equipment.....	471
8.11.5	Vibration Welding Joint Design.....	472
8.11.6	Vibration Welding Aligning and Fixturing	473
8.11.7	Vibration Welding Tolerances	474
8.11.8	Vibration Welding Equipment.....	474
8.12	Spin Welding Method.....	476
8.12.1	Applications.....	476
8.12.2	Basic Spin Welding Equipment	476
8.12.3	Spin Welding Variables	477
8.12.4	Types of Spin Welding Processes.....	477
8.12.5	Spin Welding Joint Designs	480
8.12.6	Spin Welding Process Suggestions.....	480
8.13	Ultrasonic Welding Method	482
8.13.1	Ultrasonic Welding Basic Principles.....	482
8.13.2	Ultrasonic Welding Basic Components	483
8.13.3	Ultrasonic Welding Equipment.....	483
8.13.4	Ultrasonic Welding Process Variables.....	487
8.13.5	Ultrasonic Welding Joint Designs	489
8.13.6	Ultrasonic Welding Energy Director Butt Joint	492
8.13.7	Ultrasonic Welding Method Design Limitations	494
8.13.8	Weldability of Thermoplastic Materials.....	496
8.13.9	Effects Caused by Thermoplastic Additives on Ultrasonic Welding.....	497
8.14	Ultrasonic Insertion	500
8.14.1	Applications.....	500
8.14.2	Ultrasonic Insertion Configurations	501
8.14.3	Ultrasonic Insertion Product Design	502
8.14.4	Ultrasonic Insertion Equipment Requirements.....	502
8.14.5	Ultrasonic Insertion Process Guidelines	503
8.15	Ultrasonic Stud Staking Method	503
8.15.1	Ultrasonic Stud Staking Joint Design.....	503
8.16	Ultrasonic Stud Heading Method	506
8.16.1	Thermoplastic Stud Profiles for Ultrasonic Heading ..	506
8.17	Ultrasonic Spot Welding Method.....	509
8.17.1	Hand-Held Ultrasonic Spot Welder	510
9	Thermoplastic Effects on Product Design.....	511
9.1	Polymer Melt Behavior.....	511

9.1.1	Thermoplastics Glass Transition Temperature	513
9.2	General Characteristics of Polymers	513
9.2.1	Critical Properties of Thermoplastics.	514
9.3	Polymer Reinforcements	515
9.3.1	Types of Fiber Reinforcements	516
9.3.2	Isotropic Warpage of Fiber Reinforced Resins	517
9.3.3	Fiber Glass Reinforcement Limitations	517
9.3.4	Injection Molding Process Effects on Fiber Glass Orientation	517
9.3.5	Tensile Stress Effects Caused by Fiber Glass Orientation	518
9.3.6	Flexural Modulus Effects Caused by Fiber Glass Orientation	519
9.4	Chemical and Environmental Resistance	520
9.4.1	Effects of the Environment.	521
9.5	Types of Degradations	522
9.5.1	Oxidative Degradation	522
9.5.2	Radiation Degradation	522
9.5.3	Photo Oxidation.	522
9.5.4	Mechanical Degradation.	522
9.5.5	Microbial Degradation	523
9.6	Moisture Effects on Nylon Molded Parts	523
9.7	Aqueous Potassium Acetate for Moisture Conditioning Nylon. .	527
9.8	Injection Molding Cycles.	528
9.9	Mold Cavity Surface Temperature	529
9.10	Mold Cavity Temperature Control	530
9.10.1	Mold and Post-Mold Shrinkage.	531
9.11	Process Condition Effects on Mold Shrinkage	533
9.12	Post-Mold Shrinkage	538
9.13	Weld Lines.	541
10	Injection Mold Design	545
10.1	Classification of Injection Molds	545
10.2	Effects of Product Design on the Injection Molding Process. . .	546
10.2.1	Uniform Wall Thickness	547
10.2.2	Balance Geometrical Configuration.	547
10.2.3	Smooth Internal Sharp Corners	547
10.2.4	Draft Walls	547
10.2.5	Feather Edges.	547
10.2.6	Proportional Boss Geometries.	548
10.2.7	Gate Type and Location	548
10.2.8	Molded Product Ejection Surface Area	548
10.2.9	Molded Product Tolerances	548
10.2.10	Surface Finish of Molded Product	549
10.3	Effects of Mold Design on the Injection Molding Process	549
10.3.1	Runner System	549
10.3.2	Mold Cooling System.	549
10.3.3	Ejector System.	550
10.3.4	Mold Venting.	550
10.3.5	Other Mold Devices.	550
10.4	Design Considerations for Injection Molds.	550
10.4.1	Preliminary Mold Design	551
10.4.2	Detailed Mold Design	552
10.5	Types of Steels Required for Injection Molds	553

10.5.1	Major Steel Families	553
10.6	Steels for Thermoplastic Injection Molds	557
10.6.1	General Steel Selection Procedures	558
10.6.2	Properties and Characteristics of Tool Steels	559
10.6.3	Effects of Alloying Elements on Tool Steel Properties.	559
10.6.4	Chemical Composition of Steels Used for Molds	559
10.6.5	Effects of Alloying on Tool Steels	560
10.6.6	Effects of Heat Treatment on Tool Steel Properties.	562
10.6.7	Prehardened Tool Steels	564
10.6.8	Carburizing Tool Steels	566
10.6.9	Oil and Air Hardening Tool Steels.	567
10.6.10	Stainless Steels.	568
10.6.11	Steels Used in Thermoplastic Injection Mold Components	569
10.7	Mold Cavity Surface Finishing	571
10.7.1	Mold Surface Finishing Process Procedures	573
10.8	Thermoplastic Injection Mold Bases.	578
10.8.1	Standard Mold Base Components.	578
10.8.2	Functions of the Mold Base Components	579
10.8.3	Types of Standard Mold Bases	582
10.9	Types of Thermoplastic Injection Molds	583
10.9.1	Two-Plate Molds.	584
10.9.2	Round Mate® Interchangeable Insert Molds	585
10.9.3	Master Unit Die Interchangeable Insert Molds	585
10.9.4	Three-Plate Mold Cold Runner System	586
10.9.5	Vertical Insert Mold for Thermoplastic Encapsulations	587
10.9.6	Hot Runner Molding Systems	588
10.9.7	Hot Runner Mold Temperature Control Systems	589
10.9.8	Hot Runner Mold Gates (Drops)	590
10.9.9	Types of Hot Runner Molding Systems	593
10.9.10	Thermoplastic Stack Injection Molds.	601
10.9.11	Lost Core Thermoplastic Injection Molds.	602
10.10	Number of Mold Cavities	606
10.10.1	Cavity Number Limitations	606
10.10.2	Number of Mold Cavities Equation	606
10.11	Mold Parting Line	607
10.11.1	Flat Mold Parting Line.	607
10.11.2	Non-Flat Mold Parting Line.	608
10.11.3	Balancing of Mold Parting Line Surfaces.	610
