

Contents

1. Overall View of Late-Cenozoic Climate and Glaciation	1
2. Development of Concepts	11
3. Glaciers of Today	27
4. Spatial Distribution and Volume of Glaciers	63
5. Glacial Erosion and Transport	86
6. Glacially Sculptured Terrain	127
7. Glacial Drift: Sediments	147
8. Morphology of Glacial Drift	198
9. Drainage; Eolian Features	227
10. Frost-Action Effects	267
11. Weathering and Soils; Caverns; Stream Regimens	287
12. Fluctuation of Sealevel	315
13. Glacial-Isostatic Deformation	343
14. Stratigraphy	367
15. Geochronology	395
16. Late-Cenozoic Climates	414

xii	Contents	
17.	Pluvial Features	442
18.	Late-Wisconsin Glaciers in North America	463
19.	North America Outside the Glacier-Covered Regions	498
20.	Stratigraphy and Climatic History of Western North America	517
21.	Stratigraphy of Central North America	541
22.	Stratigraphy of Eastern North America	573
23.	Late Weichsel Environments in Europe	592
24.	Stratigraphy of Europe	621
25.	Quaternary of Asia, Australia, and Pacific Islands	661
26.	Quaternary of Africa, South America, and Antarctica	692
27.	Stratigraphy of Deep-Sea Floors	716
28.	Quaternary Fossils I: General, Plants, Invertebrates	733
29.	Quaternary Fossils II: Vertebrates	747
30.	The Problem of Causes	788
