CONTENTS

	Preface	**ix**
	Units and Conversions	**xi**
1	**Groundwater and Aquifers**	**1**
1.1	Definition of groundwater	1
1.2	Aquifers	3
1.3	Origin and age of groundwater	6
1.4	Distribution of groundwater	8
2	**Physical Properties of Aquifers and Vadose Zones**	**12**
2.1	Pressure head	12
2.2	Texture of unconsolidated materials	16
2.3	Structure of clay	19
2.4	Porosity	21
2.5	Void ratio	22
2.6	Bulk density	22
2.7	Water content	23
2.8	Saturation percentage	25
2.9	Soil-water characteristic and water in the vadose zone	25
2.10	Storage coefficient, specific yield, and fillable porosity	29
2.11	Safe yield	32
3	**Darcy's Law and Hydraulic Conductivity**	**36**
3.1	Darcy's law	36
3.2	Laboratory determination of hydraulic conductivity	40
3.3	Validity of Darcy's law	41
3.4	Factors affecting hydraulic conductivity	43
3.5	Intrinsic permeability and hydraulic-conductivity units	45
3.6	Aquifer flow and transmissivity	46

3.7 Dupuit-Forchheimer assumption and application of Darcy's law to simple flow systems 48
3.8 Anisotropy 56

4 Well-Flow Systems 65

4.1 Introduction 65
4.2 Steady flow 66
4.3 Transient flow 71
4.4 Partially penetrating wells 79
4.5 Well losses 83
4.6 Specific capacity 85
4.7 Infiltration galleries and radial collector wells 86

5 Measurement of Hydraulic Conductivity, Transmissivity, Specific Yield, and Storage Coefficient 90

5.1 Introduction 90
5.2 Pumped-well techniques 91
5.2.1 Basic aspects 5.2.2 Observation wells 5.2.3 Confined aquifers 5.2.4 Leaky aquifers 5.2.5 Unconfined aquifers 5.2.6 Finite aquifers, anisotropy, special cases
5.3 Rate-of-rise techniques 113
5.3.1 Slug test 5.3.2 Auger-hole method 5.3.3 Piezometer method
5.4 Flow-system techniques 122
5.5 Hydraulic-conductivity measurement in the vadose zone 123
5.5.1 Air-entry permeameter 5.5.2 Infiltration-gradient technique 5.5.3 Double-tube method 5.5.4 Well pump-in technique
5.6 Measuring anisotropy of soils and aquifers 130
5.7 Core sampling and permeameter technique 131
5.8 Planning and interpreting hydraulic-conductivity measurements 131

6 Groundwater Exploration, Well Construction, and Pumping 137

6.1 Groundwater exploration and well-site selection 137
6.1.1 Reconnaissance surveys 6.1.2 Geophysical methods 6.1.3 Test drilling
6.2 Well logging 148
6.2.1 Driller's logs 6.2.2 Sampling 6.2.3 Geophysical logging
6.3 Well construction 155
6.3.1 Types of wells 6.3.2 Drilling techniques 6.3.3 Screens, perforations, and gravel envelopes 6.3.4 Well cementing 6.3.5 Development, stimulation, and sterilization of wells
6.4 Pump and power units 180
6.4.1 Types of pumps and performance characteristics 6.4.2 Power and energy requirements 6.4.3 Optimum discharge
6.5 Deterioration and maintenance of wells 190
6.5.1 Incrustation 6.5.2 Corrosion 6.5.3 Abandoned wells
6.6 Costs of wells and pumping 194

7 Flow-System Analysis, Models, and Unsaturated Flow 200

7.1 Mathematical techniques 201
7.1.1 Analytic solutions 7.1.2 Superposition 7.1.3 Images 7.1.4 Numerical solution

7.2 Sand tanks and Hele-Shaw models 211

7.3 Electrical and other analogs 214
7.3.1 Electrolytic-tank analogs 7.3.2 Resistance-network analogs 7.3.3 Resistance-capacitance analogs

7.4 Digital computers 226
7.4.1 Finite-difference method 7.4.2 Hybrid models 7.4.3 Finite-element method

7.5 Input data and model calibration 229

7.6 Flow in anisotropic media 231

7.7 Unsaturated flow 234
7.7.1 Unsaturated-hydraulic-conductivity relations 7.7.2 Flow-system analysis 7.7.3 Simplified solutions

8 Surface-Subsurface Water Relations 252

8.1 Infiltration, evapotranspiration, and recharge 252
8.1.1 Physical infiltration equations 8.1.2 Empirical infiltration equations 8.1.3 Infiltration of rainfall 8.1.4 Profile drainage 8.1.5 Evapotranspiration 8.1.6 Groundwater recharge

8.2 Seepage from surface water 268
8.2.1 Steady-state systems 8.2.2 Transient systems

8.3 Artificial recharge 279
8.3.1 Recharge basins 8.3.2 Clogging 8.3.3 Injection wells

8.4 Flow of groundwater to the surface environment 293
8.4.1 Wells 8.4.2 Springs, seeps, and gaining streams 8.4.3 Agricultural drains

8.5 Evaporation of groundwater 299

8.6 Groundwater use by phreatophytes 302

9 Subsidence and Lateral Movement of the Land Surface Due to Groundwater Pumping 313

9.1 Occurrence of subsidence 313

9.2 Intergranular pressure 315

9.3 Increasing intergranular pressure by declining water table 316

9.4 Calculation of subsidence 317

9.5 Increasing intergranular pressure by declining piezometric surface 326

9.6 Increasing intergranular pressure by water movement 328

9.7 Noordbergum effect 332

9.8 Earth fissures 333

9.9 Subsidence of peats and mucks 335

9.10 Hydrocompaction 335

10 Groundwater Quality 339

10.1 Chemical constituents in atmospheric precipitation 339

10.2 Soil and plant effects 341
10.3 Aquifer effects 342
10.4 Groundwater constituents and suitability for drinking 344
10.5 Water quality standards for drinking, irrigation, and industrial uses 358
10.6 Dating and tracing of groundwater 370
10.7 Groundwater temperature and geothermometers 378
10.8 Geothermal power generation 382

11 Groundwater Contamination 396

11.1 Dispersion and other attenuation 397
11.2 Saltwater intrusion 402
11.3 Road salt 406
11.4 Sewage and sludge 407
11.5 Solid waste 419
11.6 Cemeteries 423
11.7 Agriculture 424
11.8 Mining 432
11.9 Disposal of radioactive wastes 435
11.10 Underground storage of liquid waste 438
11.11 Lagoons and evaporation ponds 442
11.12 Oil leaks and spills 443
11.13 Urban run off and polluted surface water 444

12 Groundwater Rights 456

Answers to Calculation Problems 465
Index 469
