

Contents

<i>Preface</i>	vii
1 Rock and rock mass permeability	1
1.1 Permeability	1
1.2 Permeability of discontinuous media	3
1.3 Laboratory permeability studies – intact rock specimens	5
1.4 Rock mass structure	7
1.5 <i>In situ</i> investigations	8
1.6 Influence of geostatic stress on rock mass permeability	11
1.7 Relations between discontinuity geometry and depth	15
1.8 Maximum depth for extension joints	19
1.9 Effect of depth on permeability	20
1.10 Imposed rock fractures and permeability perturbations	23
1.11 Stresses and deformation induced by excavation	26
1.12 Permeability changes during mining	31
1.13 Effect of excavation technique on fractures	35
1.14 Influence of thermal stresses on rock permeability	36
2 Rock discontinuity characterization	38
2.1 Description of discontinuities	38
2.2 Discontinuity orientation – statistical analysis	40
2.3 Spacing, frequency and intensity	45
2.4 Discontinuity trace length and shape	48
2.5 Discontinuity roughness	52
2.6 Wall strength	55
2.7 Discontinuity aperture	58
2.8 Discontinuity infill and seepage	60
2.9 Joint sets and block size	60
3 Fluid flow in a single discontinuity	65
3.1 Discontinuity deformation – normal stress	65

3.2	Discontinuity deformation – shear stress	67
3.3	Effect of stress on permeability	68
3.4	Effects of size	72
3.5	Aperture and conducting aperture	74
3.6	Hydraulic characteristics of discontinuities	77
3.7	Validity of the cubic law	82
4	Permeability and depth in rock masses	84
4.1	Hydraulic properties of a discontinuous medium	84
4.2	Permeability as a function of stress	85
4.3	Joint system models	89
4.4	Coupling, closure and geometry	91
4.5	Relations between conducting aperture and depth	93
4.6	Estimation of rock mass permeability by empirical methods	97
5	Connectivity, scale effects and percolation theory	104
5.1	Heterogeneity and interconnectivity	105
5.2	Percolation theory	106
5.3	Percolation threshold and invariants	109
5.4	Percolation fracture flow	111
5.5	Estimation of rock mass permeability by percolation theory	113
5.6	Representative Elementary Volume (REV)	116
6	Flow models	120
6.1	Fluid flow models	120
6.2	Discrete fracture flow model for connectivity	122
6.3	Sensitivity analysis – connectivity	128
6.4	Connectivity and scale effect	142
6.5	Boundary integral element method	144
6.6	Discrete network model for flow	146
6.7	Sensitivity analysis – flow	150
