

CONTENTS

Contributors	xv
Preface	xix

SECTION I Fluorescence Methods

1. <i>In Vivo</i> Applications of Fluorescence Correlation Spectroscopy <i>Huimin Chen, Elaine R. Farkas, and Watt W. Webb</i>	
I. Introduction	4
II. FCS Technology	12
III. Applications of <i>In Vivo</i> FCS	16
IV. Future Directions for <i>In Vivo</i> FCS	25
V. Conclusions	28
References	28
2. Molecular Sensors Based on Fluorescence Resonance Energy Transfer to Visualize Cellular Dynamics <i>Bharath Ananthanarayanan, Qiang Ni, and Jin Zhang</i>	
I. Introduction	38
II. Basic Principles of FRET-Based Molecular Sensors	38
III. Methods	45
IV. A Case Study of PI3K/Akt Signaling Pathway	52
V. Discussion and Conclusion	54
References	54
3. A Fluorescent Window Into Protein Folding and Aggregation in Cells <i>Zoya Ignatova and Lila M. Gierasch</i>	
I. Introduction	60
II. Rationale	61
III. Methods	61
IV. Summary	68
References	69

4. Combining Microfluidics and Quantitative Fluorescence Microscopy to Examine Pancreatic Islet Molecular Physiology <i>Jonathan V. Rocheleau and David W. Piston</i>	72
I. Introduction	73
II. Rationale	79
III. Methods and Materials	88
IV. Discussion	89
References	
SECTION II Microscopic Methods	
5. Imaging in Depth: Controversies and Opportunities <i>Don O'Malley</i>	96
I. Introduction	98
II. Basic Imaging Methodologies	100
III. Forays Deeper into Depth	118
IV. Discussion: Terms of Resolution	120
V. Summary	120
References	120
6. Principles and Practice in Electron Tomography <i>Bruce F. McEwen, Christian Renken, Michael Marko, and Carmen Mannella</i>	130
I. Introduction	131
II. Specimen Preparation	138
III. Data Collection for Electron Tomography	144
IV. Computation of an Electron Tomographic Reconstruction	151
V. Interpretation of Electron Tomographic Reconstructions	161
VI. Summary and Future Directions	162
References	
7. Total Internal Reflection Fluorescence Microscopy <i>Daniel Axelrod</i>	170
I. Introduction	171
II. Rationale	175
III. Theoretical Principles	186
IV. Combinations of TIRF with Other Techniques	196
V. Optical Configurations and Setup	208
VI. General Experimental Considerations	212
VII. Summary: TIRF Versus Other Optical Section Microscopies	213
References	

8. Spatiotemporal Dynamics in Bacterial Cells: Real-Time Studies with Single-Event Resolution	
<i>Ido Golding and Edward C. Cox</i>	
I. Introduction	224
II. Studying Cellular Dynamics with Single-Event Resolution	225
III. Methods	227
IV. Summary and General Lessons for Following Discrete Events	248
References	249
9. Counting Proteins in Living Cells by Quantitative Fluorescence Microscopy with Internal Standards	
<i>Jian-Qiu Wu, Chad D. McCormick, and Thomas D. Pollard</i>	
I. Introduction	254
II. Experimental Methods	257
III. Data Analysis	267
IV. Conclusions	269
References	272
10. Infrared and Raman Microscopy in Cell Biology	
<i>Christian Matthäus, Benjamin Bird, Miloš Miljković, Tatyana Chernenko, Melissa Romeo, and Max Diem</i>	
I. Introduction	276
II. Methods	278
III. Results and Discussion	288
IV. Conclusions	307
References	307
11. Imaging Fluorescent Mice <i>In Vivo</i> Using Confocal Microscopy	
<i>Stephen G. Turney and Jeff W. Lichtman</i>	
I. Introduction	310
II. Rationale	310
III. Methods and Materials	321
IV. Discussion and Summary	325
References	326

12. Nanoscale Biological Fluorescence Imaging: Breaking the Diffraction Barrier	
<i>Travis J. Gould and Samuel T. Hess</i>	
I. Introduction	330
II. Theory and Rationale	335
III. Methods	338
IV. Materials	345
V. Discussion	347
VI. Summary	356
References	356

SECTION III Methods at the *In Vitro/In Vivo* Interface

13. Imaging of Cells and Tissues with Mass Spectrometry: Adding Chemical Information to Imaging	
<i>Tyler A. Zimmerman, Eric B. Monroe, Kevin R. Tucker, Stanislav S. Rubakhin, and Jonathan V. Sweedler</i>	
I. Introduction	362
II. Instrumentation	364
III. Sample Preparation for MSI	372
IV. Image Acquisition and Data Analysis	382
V. Specialized Methods	384
VI. Summary and Future Directions	385
References	386
14. Electron Microscopy of Hydrated Samples	
<i>Winston Timp and Paul Matsudaira</i>	
I. Introduction	392
II. Basic SEM	392
III. Environmental SEM	396
IV. Wet SEM	401
V. Summary	404
References	406

SECTION IV Methods for Diffusion, Viscosity, Force and Displacement

15. Live-Cell Single-Molecule Force Spectroscopy

Terrence M. Dobrowsky, Pornnula Panorchan, Konstantinos Konstantopoulos, and Denis Wirtz

I. Introduction	412
II. Materials and Instrumentation	420
III. Procedures	421
IV. Pearls and Pitfalls	429
V. Concluding Remarks	430
References	430

16. Magnetic Manipulation for Force Measurements in Cell Biology

E. Tim O'Brien, Jeremy Cribb, David Marshburn, Russell M. Taylor II, and Richard Superfine

I. Introduction	434
II. Sample Preparation	436
III. Video and Laser-Based Magnetic Systems	439
IV. Calibration of Pole Tips	440
V. Pole Configurations	442
VI. Modes of Magnet Controls	442
VII. Cell Experiments with Magnetics	444
VIII. Driven Bead Rheology of Biologic Fluids	446
IX. Conclusions	449
References	449

17. Application of Laser Tweezers to Studies of Membrane–Cytoskeleton Adhesion

Drazen Raucher

I. Introduction	452
II. Materials and Methods	455
III. Tether Force Measurements of the Adhesion Energy Between the Plasma Membrane and the Cortical Cytoskeleton	460
IV. Concluding Remarks	464
References	465

18. Sensing Cytoskeletal Mechanics by Ballistic Intracellular Nanorheology (BIN) Coupled with Cell Transfection	
<i>Melissa S. Thompson and Denis Wirtz</i>	
I. Introduction	468
II. Materials and Instrumentation	473
III. Procedures	477
IV. Pearls and Pitfalls	484
V. Concluding Remarks	485
References	485
19. Mechanical Response of Cytoskeletal Networks	
<i>Margaret L. Gardel, Karen E. Kasza, Clifford P. Brangwynne, Jiayu Liu, and David A. Weitz</i>	
I. Introduction	488
II. Rheology	489
III. Cross-Linked F-Actin Networks	493
IV. Effects of Microtubules in Composite F-Actin Networks	504
V. Intermediate Filament Networks	512
VI. Conclusions and Outlook	515
References	516
20. Automated Spatial Mapping of Microtubule Catastrophe Rates in Fission Yeast	
<i>Christian Tischer, Damian Brunner, and Marileen Dogterom</i>	
I. Introduction	522
II. Methods	523
III. Results	534
IV. Discussion	535
References	537

SECTION V Techniques for Protein Activity and Protein–Protein Interactions

21. Quantitative Fluorescence Lifetime Imaging in Cells as a Tool to Design Computational Models of Ran-Regulated Reaction Networks	
<i>Petr Kalab and Arnd Pralle</i>	
I. Quantitative Imaging and Systems Modeling as a Tool in Cell Biology— The Rationale and Strategy	543
II. Quantitative Detection of Biochemical Interactions by FLIM	546
III. Technical Considerations for FLIM in Live Cells	552

IV. Analysis of the Mitotic RanGTP Gradient Function by FLIM and Computational Modeling	557
V. Materials and Methods	562
References	565
22. Quantitation of Protein–Protein Interactions: Confocal FRET Microscopy <i>Anmasi Periasamy, Horst Wallrabe, Ye Chen, and Margarida Barroso</i>	
I. Introduction	570
II. Rationale	571
III. Material and Methods	572
IV. Results and Discussion	582
V. Summary	595
References	595

SECTION VI Computational Modeling

23. Stochastic Modeling Methods in Cell Biology <i>Sean X. Sun, Ganhui Lan, and Erdinc Atilgan</i>	
I. Introduction	602
II. Stochastic Methods in Signaling and Genetic Networks	607
III. Molecular Motors and the Inclusion of Biomolecular Structure in Stochastic Models	609
IV. Cytoskeleton and Cytoskeletal Network Structures	613
V. Procedures	617
VI. Discussion and Concluding Remarks	618
VII. Appendix	619
References	620
24. Computational Modeling of Self-Organized Spindle Formation <i>Stuart C. Schaffner and Jorge V. José</i>	
I. Introduction	624
II. Rationale	625
III. Methods	629
IV. Materials	646
V. Discussion and Summary	647
VI. Appendix A	647
VII. Appendix B	648
References	651
