

CONTENTS

<i>Preface</i>	<i>vii</i>
Chapter 1 Introduction	1
Using computers	7
Notes	30
Chapter 2 Artificial intelligence, teaching and learning	33
MYCIN – An artificial intelligence program	33
Intelligent computer-assisted learning systems	41
Artificial intelligence and educational philosophy	49
Notes	60
Chapter 3 A history of computers in education	67
Linear programs	69
Branching programs	72
Generative computer-assisted learning	78
Mathematical models of learning	83
The TICCIT project	86
The PLATO project	93
Simulations	98
Games	103
Problem-solving	107
Emancipatory modes	113
Dialogue systems	115
Summary	120
Notes	122
Chapter 4 Computer as teacher	127
Program competence	128
Student models	143

Tutorial strategies	152
Communication	161
Summary	170
Notes	172
Chapter 5 Computer as tool	177
Learning programming	179
Learning mathematics via Logo	188
Learning other subjects via programming	194
The Smalltalk philosophy	200
The role of graphics	204
Learning via Smalltalk	206
Further examples	210
Summary	214
Notes	215
Chapter 6 Making the computer effective in the classroom	217
Problems	217
Modes	225
Beneficiaries	233
Summary	242
Notes	242
Chapter 7 The next decade	245
Background	245
Technology	248
Educational computing	260
Notes	268
<i>Glossary</i>	269
<i>Acronymography</i>	273
<i>Bibliography</i>	277
<i>Acknowledgements</i>	299
<i>Index</i>	301
