Preface vii

<i>Chapter 1</i>	Introduction and Overview	1		
	Computers in Schools, Universities, and Homes	2	Order and Contents of	
	This Book	3	We Have Much to Learn	4
			Important Points	4

I MODES OF COMPUTER USAGE 7

<i>Chapter 2</i>	Learning to Program	9		
	What Is Programming?	10	Programming Languages	11
	Computer Program	13	A	
	Why Should Someone Learn to Program?	18	Programming Style—Structured Programming	14
	Program	19	Learning to	
	Programming Example	22	Computer Power as an	
	Example of a Programming Course	25	New Languages and Facilities for	
	Introductory Programming	26	The Advanced Placement Computer	
	Course	28	Don't Teach or Learn BASIC	28

<i>Chapter 3</i>	Computer Literacy	32		
	Literacy	33	A Definition of Computer Literacy	33
	Literacy for Whom?	34	Computer	
	Students	34	Essential Ingredients of Computer Literacy for	
	Computer Literacy Course	39	Missing Items of Dubious Value	39
	Computers?	39	An Example of a	
			Should Computer Literacy Involve	
			Is Computer Literacy a Separate Course?	40

Computer Literacy for Science and Engineering—A Curriculum	40
Computer Literacy—The Elephant	42

Chapter 4	Intellectual Tools	43
	Types of Intellectual Tools	44
	Examples of Intellectual Tools	45
	Introduction to Logo	48
	Logo and Procedures	52
	Logo as an Intellectual Tool	53
	The Teacher's Role	54
	Logo Problems	54
	Boxer	56
	Another Intellectual Tool—Introductory Mechanics	57
	Concluding Remarks	58
Chapter 5	Computer-based Learning	60
	How Many Work Together?	61
	Aspects of Computer-based Learning	62
	Examples of Computer-based Learning	63
Chapter 6	Management Systems	74
	Testing	75
	Sequencing of Materials	76
	What Information Is Stored?	77
	Teacher Aids	78
	Student Aids	78
	Examples of Management Systems	79

II FURTHER DETAILS ABOUT THE COMPUTER 83

Chapter 7	Advantages and Disadvantages of Computers in Education	85
	Theories of Learning and Curriculum Development	86
	Advantages of Computers in Education	88
	Current Disadvantages of Computers in Education	92
Chapter 8	Teacher Evaluation of Computer Materials	94
	Formative and Summative Evaluation	95
	Looking Over the Material	95
	One Example of an Evaluation Form	100
	Things to Avoid	100
	Reviews	106
	Testing with Students	106
Chapter 9	Hardware—The Raw Computer	108
	What Is a Computer?	109
	Memory	109
	Measuring Memory	111
	Processors	112
	Chip Technology	113
	Input and Output	113
	Graphics	114
	Maintenance	115
	Choosing Hardware	115
Chapter 10	Practical Issues of Computer Use in Education	117
	The School Environment for Computers	117
	College and University Environments for Computers	119
	Computing Departments	120
	Who Owns the Computers?	120
	Teachers and Faculty	121
Chapter 11	Developing Curriculum Material for Computers 	122
	How Textbooks Are Produced	123
	Steps Leading to Curriculum Material	124
	Production Strategy for Computers	126
	Initial Pedagogical Design for Computer-based Learning Material	127
	Detailed Pedagogical Design	128

<i>Chapter 12</i>	Developing Curriculum Material for Computers II	136
	Screen Design	136
	Coding	137
	Review, Evaluation, and Revision	138
	Estimates of Resources for Developing Computer-based Learning Material	144
	The Production Process	145
	Some Important Points for Producing Computer-based Material	146

III THE FUTURE 147

<i>Chapter 13</i>	Future Computer Equipment	149
	Evolution of Chips	149
	Memory Chips	150
	Processor Chips	151
	Future Software	151
	Auxiliary Technology for Education	154
	New Technologies	159
<i>Chapter 14</i>	Computers and the Future of Education	160
	Current Problems in Education	161
	There Will Be Computers!	162
	Extensive Curriculum Development Involving Computers	163
	What and How Will Learners Learn?	166
	Environments	168
	Teachers	171
	Students	172
	Visions of Learning	173
	Index	175
