Contents

FOREWORD 11

INTRODUCTION 13
Constructing a corpus 14
The framework of ideas 21

AN EXPLORATORY STUDY

1 THE DEVELOPMENT OF OBJECTIVES
Goals and objectives 25
Cases of elaboration 27
Deferred objectives 30
The unified generalization proposal 35
Final discussion: functional lability 41
Implications for method 45

FOUR DETAILED CASE STUDIES OF ONE CHILD

2 THE PROGRESSIVE CONSTRUCTION OF MIND
Studying natural learning 48
The organization of disparate structures 50
A new world of experience 50
Genesis and structure 55
The introduction of paper sums 56
The carrying breakthrough 58
Coordinating and task-rooted structures 61
Paper sums and mental arithmetic 64
Summary and reflections 68

3 THE EQUILIBRATION OF COGNITIVE STRUCTURES 71
Piaget and Papert 72
Programming as an experimental domain 74
Pre-programming computer experiences 75
Precursors of debugging: pretty flower 80
The social context of debugging 84
Debugging instruction 86
Taking instruction 92
The PERSON project 97
Preliminary conclusions 101
The ramifications of debugging experience 102
Equilibration and stages 105
Conclusions 112

4 THE ARTICULATION OF COMPLEMENTARY ROLES
Prelude 113
Introduction 115
Describing the initial state 119
Homely binding 125
Table turning 128
Opening advantage 131
Lonely discoveries 134
A new strategy 137
Discovery reconstruction 139
A stage change 141
Conclusions 145

5 COGNITIVE ORGANIZATION
The central proposal 149
Two geometries 152
Computer-generated designs 165
Converging interpretations 178
Summary and new directions 183

6 SUMMARY 186
Structure: principles and conclusions 189
Process: principles and conclusions 191
Concluding comments 192

7 THE GENESIS OF MICROVIEWS
A compact sketch of microviews 193
Control structure 198
Learning processes 199

Appendix
RELATING THIS SUBJECT TO OTHER STUDIES 210
