

Preface ix

<b>Chapter 1 The Science of Navigation</b>	<b>1</b>
1.1 Navigation Definition	3
1.2 Simplified Navigation Examples	4
1.2.1 Dead reckoning	5
1.2.2 Inertial navigation	8
1.2.3 Positioning	11
1.3 Navigation-System Overview	12
1.3.1 Coordinate frames	12
1.3.2 Sensors	12
1.3.3 Mechanization equations	13
1.3.4 Navigation-error sources	14
1.3.5 Error analysis and correction	14
1.4 Types of Inertial Systems	15
1.5 Positioning Systems	16
1.6 Complementary Filters	17
<b>Chapter 2 Coordinate Frames and Transformations</b>	<b>21</b>
2.1 Coordinate Frame Definitions	21
2.1.1 Inertial frame	22
2.1.2 Earth-centered earth-fixed (ECEF) frames	22
2.1.3 Geographic frame	23
2.1.4 Geocentric frame	23
2.1.5 Local geodetic or tangent plane	23
2.1.6 Body or vehicle frame	23
2.1.7 Platform	24
2.1.8 Instrument frames: accelerometer and gyro	24
2.1.9 Summary	25
2.2 ECEF coordinate systems	25
2.2.1 ECEF rectangular coordinates	26
2.2.2 ECEF geodetic coordinates	26
2.2.3 ECEF transformations	27
2.3 Points and Vectors	29
2.3.1 Points	30
2.3.2 Vectors	32
2.4 Vector Transformations	33

2.4.1	Plane rotations	33
2.4.2	Quaternions	39
2.5	Rotating Reference Frames	42
2.5.1	Direction-cosine kinematics	42
2.5.2	Derivative calculations in rotation frames	43
2.5.3	Calculation of the direction cosine	44
<b>Chapter 3 Systems Concepts</b>		<b>55</b>
3.1	Continuous-Time Systems	55
3.1.1	Ordinary differential equations	56
3.1.2	Transfer functions	56
3.1.3	State space	57
3.1.4	State-space linearization	60
3.2	Discrete Time Systems	61
3.2.1	Ordinary difference equations	61
3.2.2	Transfer functions	62
3.2.3	Discrete-time state space	62
3.3	State-Space Analysis	64
3.3.1	Similarity transformation	64
3.3.2	Transformation from state space to transfer function	65
3.3.3	State-transition matrix properties and calculation	66
3.3.4	Discrete-time models of continuous-time systems	68
3.3.5	State estimation	69
3.3.6	Observability	72
3.4	Systems with Random Inputs	76
3.4.1	Linear Stochastic Systems and State Augmentation	77
3.4.2	Gauss–Markov Processes	78
3.4.3	Calculation of $Q_d(k)$ from $Q(t)$	84
3.4.4	Mean and covariance propagation	87
3.4.5	One-dimensional inertial-frame INS example	89
3.4.6	One-dimensional aided inertial-frame INS example	91
3.4.7	Covariance analysis: processing of submatrices	93
<b>Chapter 4 Discrete Linear and Nonlinear Kalman Filtering Techniques</b>		<b>95</b>
4.1	Weighted Least Squares (WLS)	96
4.1.1	Weighted-least-squares solution	97
4.1.2	Recursive least squares (RLS)	99
4.1.3	Kalman filtering	102
4.2	Kalman Filter: Alternative Implementations	105
4.3	Kalman Filter: Properties	111
4.4	Performance Analysis	113
4.4.1	Monte Carlo analysis	114
4.4.2	Covariance analysis	114
4.4.3	Error budgeting	119
4.5	Implementation Issues	124
4.5.1	Scalar measurement processing	124
4.5.2	Correlated measurements	125
4.5.3	Bad or missing data	125
4.5.4	Divergence	126
4.6	Numeric Issues	128
4.6.1	Covariance matrix symmetry	128
4.6.2	Covariance matrix positive definiteness	128
4.7	Suboptimal Filtering	129

4.7.1	Deleting states	129
4.7.2	Schmidt–Kalman filtering	131
4.7.3	Decoupling	132
4.7.4	Off-line gain calculation	134
4.7.5	Nonlinear Filtering	135
<b>Chapter 5 The Global Positioning System</b>		<b>141</b>
5.1	GPS System Overview	142
5.2	The Mathematics of the GPS	144
5.3	Solution of the Pseudorange Equations	145
5.4	GPS Error Sources	150
5.4.1	Receiver clock bias $c\Delta t_r$	150
5.4.2	Satellite clock bias $c\Delta t_{sv}$	154
5.4.3	Atmospheric delay $c\Delta t_a$	155
5.4.4	Selective availability	157
5.4.5	Ephemeris errors	158
5.4.6	Multipath	158
5.4.7	Receiver noise $\eta$	159
5.4.8	Pseudorange error model	159
5.5	Geometric Dilution of Precision	160
5.6	Two-Frequency Receivers	164
5.7	Carrier-Phase Observables	165
5.7.1	Doppler carrier-phase processin	166
5.7.2	Wide- and narrow-lane variables	167
5.7.3	Integer ambiguity resolution	168
5.8	Differential GPS	171
5.8.1	Position-space DGPS	172
5.8.2	Range-space DGPS	177
5.8.3	Double differences	181
5.8.4	DGPS methods summary	184
5.9	DGPS Implementation Protocol	185
5.10	GPS Summary	185
5.11	Further GPS Reading	186
<b>Chapter 6 Inertial Navigation</b>		<b>187</b>
6.1	Accelerometers	188
6.2	General Kinematic Equations	190
6.2.1	Position dynamic equations	190
6.2.2	Velocity dynamics	191
6.2.3	Attitude	197
6.3	INS Mechanization Equations	197
6.3.1	Tangent-plane mechanization equations	198
6.4	INS Error Equations	199
6.4.1	Tangent-plane INS error equations	199
6.4.2	Nominal INS error equation summary	204
6.4.3	INS nominal error state analysis	205
6.5	INS Augmented Error State Equations	211
6.5.1	Specific force error models	214
6.5.2	Angular rate (gyro) error models	216
6.5.3	Forced INS error equations	219
6.6	The Earth Geoid and Gravity Model	222

6.6.1	Earth geoid	222
6.6.2	Gravity model	223
6.7	Single-channel error models	225
6.8	Initialization Techniques	227
6.8.1	Self-alignment techniques	228
6.8.2	Aided initialization and error estimation	232
6.9	Lever-arm compensation	237
6.10	Further INS reading	239
<b>Chapter 7 Navigation Examples and Case Studies</b>		<b>241</b>
7.1	GPS Receiver Kalman Filter	242
7.1.1	Total-state Kalman filter	242
7.1.2	Stationary receiver	243
7.1.3	Low dynamic receiver	243
7.1.4	High dynamic receiver	244
7.1.5	General comments	245
7.2	GPS INS Integration Approaches	246
7.2.1	Filter approaches	246
7.2.2	Coupling approaches	248
7.2.3	Summary of advantages of GPS/INS integration	250
7.3	Pseudorange versus position aided INS	251
7.3.1	Receiver Kalman filter	252
7.3.2	User INS error Kalman filter	253
7.3.3	System performance analysis	254
7.4	Carrier-Smoothed Code	257
7.4.1	Full error model	258
7.4.2	Reduced-dimension models	261
7.4.3	Decoupled implementation	263
7.4.4	General comments	265
7.5	Range-Space DGPS Base Station Design	266
7.5.1	Base station design issues	267
7.5.2	Clock bias compensation	268
7.5.3	Single-frequency base station design	269
7.5.4	Two-frequency base station design	275
7.5.5	Base station phase-correction calculation	279
7.6	Attitude Determination	280
7.6.1	GPS-based attitude determination	281
7.6.2	GPS/INS attitude determination	283
7.6.3	Comparison	288
<b>A Notation, Symbols, and Constants</b>		<b>291</b>
A.1	Notation	291
A.2	Symbols	293
A.3	Useful Constants	295
A.4	Acronyms	295
<b>B Matrix Review</b>		<b>297</b>
B.1	Vector Properties and Operations	297
B.2	Matrix Properties and Operations	298
B.3	Derivatives with Respect to Scalars	301
B.4	Derivatives with Respect to Vectors	301

<b>B.5 Derivatives with Respect to Matrices</b>	<b>302</b>
<b>B.6 Other Useful Matrix Results</b>	<b>302</b>
<b>B.7 Miscellaneous Comments</b>	<b>303</b>
<b>C Stochastic Variables</b>	<b>305</b>
<b>C.1 Basic Stochastic-Process Concepts</b>	<b>305</b>
<b>C.2 White-Noise Processes</b>	<b>307</b>
<b>C.3 Linear System Analysis</b>	<b>307</b>
<b>C.4 System Performance Metrics</b>	<b>309</b>
<b>D Numeric Integration</b>	<b>315</b>
<b>D.1 Euler Integration</b>	<b>315</b>
<b>D.2 Predictor–Correction</b>	<b>316</b>
<b>D.3 Runge–Kutta</b>	<b>316</b>
<b>E GPS Implementation</b>	<b>319</b>
<b>E.1 Satellite Clock Corrections</b>	<b>319</b>
<b>E.2 Satellite Position Calculations</b>	<b>321</b>
<b>E.3 Atmospheric Model</b>	<b>322</b>
<b>References</b>	<b>327</b>
<b>Index</b>	<b>333</b>
