Preface	ix
Acknowledgements	xiii
Introduction	1
PART 1: PROGRAMMING ENVIRONMENTS	13
1 Micro-SOLO: a tool for elementary artificial intelligence programming <i>Marc Eisenstadt and Adam Gawronski</i>	15
2 AURAC: a debugging tool for novice SOLO users <i>Tony Hasemer</i>	29
3 Developing computer-assisted learning for physics instruction <i>Ian Every</i>	46
PART 2: DELIVERY SYSTEMS	63
4 The design of a user-friendly system <i>Mike Sharples</i>	65
5 Distance teaching and the blind student: Some applications of synthetic speech <i>Tom Vincent</i>	80
6 MERLIN: a system for combining telephone tutorials with computer-assisted learning <i>Ian Every</i>	89
7 Computer conferencing in distance education <i>Paul Bacsich</i>	101
8 System techniques for software distribution <i>Peter Zorkoczy</i>	115

PART 3: INTERACTIVE VIDEO	127
9 The problems and possibilities of interactive video <i>Diana Laurillard</i>	129
10 The use of interactive video discs for teaching physics <i>Robert Fuller</i>	143
11 Integrating computer graphics and the video disc: new instructional techniques possible with IVIS <i>Jesse Heines, Lin Olsen and Roger Bowker</i>	153
PART 4: STUDENT MODELLING	163
12 Production rule models of mathematical com- petence <i>Rick Evertsz</i>	165
13 How novices solve physics problems <i>Eileen Scanlon and Tim O'Shea</i>	176
14 Modelling physics problem-solving skills <i>Tony Priest</i>	187
15 Beginners' mental models of a programming lan- guage <i>Ann Jones</i>	198
PART 5: EVALUATING APPLICATIONS	215
16 Knowledge representation in educational software <i>John Self</i>	217
17 Exploring pupils' strategies for interpreting quali- tative multiple curve cartesian graphs <i>Jenny Preece</i>	230
18 Applying computer-assisted learning to teaching biology at a distance <i>Pat Murphy</i>	245
19 Evaluating computer-assisted learning at the Brit- ish Open University <i>Eileen Scanlon, Ann Jones and Tim O'Shea</i>	263
Index	277
