

Contents

List of Contributors *xi*

Preface *xiii*

Contents of Volume II *xvii*

1 Historical Perspective

LINUS PAULING

Text 1

2 Quantum Theory and Crystal Chemistry

J. C. PHILLIPS

Text 13

References 24

3 Pseudopotentials and Crystal Structure

MARVIN L. COHEN

I. Introduction 25

II. Pseudopotentials 26

III. Conclusions and the Future	46
References	48

4 Quantum-Defect Orbital Radii and the Structural Chemistry of Simple Solids

AARON N. BLOCH AND GINA C. SCHATTEMAN

I. Introduction	49
II. Review of Some Fundamental Concepts	50
III. Relationship of the Orbital Radii to Hartree-Fock Wavefunctions	55
IV. Orbital Electronegativities and Renormalized Orbital Radii	57
V. The Problem of the Octet Binary Compounds	63
VI. Conclusions	70
References	71

5 A Pseudopotential Viewpoint of the Electronic and Structural Properties of Crystals

ALEX ZUNGER

I. Introduction	73
II. Pseudopotentials and Structural Scales	77
III. First-Principles Density-Functional Pseudopotentials	83
IV. Trends in Orbital Radii	102
V. Separation of Crystal Structural of 565 Binary AB Compounds	117
VI. Summary	131
References	132

6 Elementary Quantitative Theory of Chemical Bonding

WALTER A. HARRISON

I. Introduction	137
II. The Formulation	138

III. The Bonding Energy	141
IV. Fourth-Order Terms	143
V. The Chemical Grip	143
VI. AB Compounds	145
VII. The Role of Noble Metal d States, Ion Distortion	146
VIII. The s-p Hybridization Energy	146
IX. The Oxygen Bridge	151
X. Tetrahedral Complexes	152
XI. Perovskites; The s-d Hybridization Energy	153
XII. Central-Atom Hybrids and Bond Orbitals	153
References	154

7 The Role and Significance of Empirical and Semiempirical Correlations

LEO BREWER

I. Introduction	155
II. Bonding Models	156
III. Correlation of Electronic Configuration and Crystal Structure	170
IV. Application of a Semiempirical Correlation	171
References	174

8 Theoretical Probes of Bonding in the Disiloxy Group

MARSHALL D. NEWTON

I. Introduction	175
II. Theoretical Considerations	176
III. Computational Details	184
IV. Results and Discussion	185
V. Conclusions	191
References	192

9 A Comparison of Experimental and Theoretical Bond Length and Angle Variations for Minerals, Inorganic Solids, and Molecules

G. V. GIBBS, E. P. MEAGHER, M. D. NEWTON, AND
D. K. SWANSON

- I. Introduction 195
- II. Molecular Orbital Method 197
- III. The Molecular Structure of Orthosilicic Acid, $\text{Si}(\text{OH})_4$: A Comparison with the Shapes of $\text{SiO}_3(\text{OH})^{3-}$ and $\text{SiO}_2(\text{OH})_2^-$ Anions in Hydrated Silicates 199
- IV. Force Constants and Optimized Geometry for the Disiloxy Unit of the Pyrosilicic Acid Molecule, $\text{H}_6\text{Si}_2\text{O}_7$: A Comparison with Experimental Geometries and the Bulk Modulus of the Silica Polymorphs 202
- V. Si—O Bridging Bond Length—Bond Strength Sum and Angle Variations 211
- VI. Geometries of Molecules and Related Groups in Solids 216
- VII. Conclusions 221
- References 222

10 The Role of Nonbonded Forces in Crystals

M. O'KEEFFE AND B. G. HYDE

- I. Introduction 227
- II. Structures Derived from That of Cristobalite 229
- III. Nonbonded or "One-Angle" Atomic Radii 237
- IV. Applications of Nonbonded Radii in Crystal Chemistry 239
- V. Nonbonded Interaction Potentials 244
- VI. What Is the Size of an Atom? 251
- References 253

11 Molecules within Infinite Solids

JEREMY K. BURDETT

- I. Introduction 255
- II. Perturbation Theory 256
- III. Geometries of Inorganic Molecules 258
- IV. Simple versus Exact Theories 263
- V. Molecular Orbitals in Solids 264
- VI. Reactions in the Solid State 274
- References 276

12 Charge Density Distributions

ROBERT F. STEWART AND MARK A. SPACKMAN

- I. Introduction 279
- II. Electrostatic Properties from Diffraction Structure Factors 281
- III. Pseudoatoms in Diatomic Molecules 283
- IV. Valence Densities from Pseudoatoms 286
- V. Electrical Field Gradients 296
- VI. Conclusions 297
- References 298

13 Some Aspects of the Ionic Model of Crystals

M. O'KEEFFE

- I. Introduction 299
- II. The Energy 300
- III. Bond Lengths 301
- IV. Ionic Radii 303
- V. Structural Predictions 304
- VI. Close Packing (Eutaxy) 307
- VII. van Der Waals Energy and Structure 308
- VIII. The Bulk Modulus and Elastic Constants 308
- IX. The Volume (Density) 310
- X. Polarizability and Polarization 311

XI. Madelung Potentials and Energy Levels	316
XII. Some Conclusions	319
References	320
