List of Algorithms	xix
Preface	xxi
I Elliptic Problems	1
1 One-dimensional problem	3
1.1 Model problem	3
1.2 A class of DG methods	3
1.3 Existence and uniqueness of the DG solution	6
1.4 Linear system	7
1.4.1 Computing the matrix A	8
1.4.2 Computing the right-hand side b	10
1.4.3 Imposing boundary conditions strongly	11
1.5 Convergence of the DG method	12
1.6 Numerical experiments	13
1.7 Bibliographical remarks	15
Exercises	17
2 Higher dimensional problem	19
2.1 Preliminaries	19
2.1.1 Vector notation	19
2.1.2 Sobolev spaces	19
2.1.3 Trace theorems	22
2.1.4 Approximation properties	24
2.1.5 Green's theorem	24
2.1.6 Cauchy–Schwarz's and Young's inequalities	25
2.2 Model problem	25
2.2.1 Weak solution	26
2.2.2 Numerical solution	26

2.3	Broken Sobolev spaces	27
2.3.1	Jumps and averages	28
2.4	Variational formulation	29
2.4.1	Consistency	30
2.5	Finite element spaces	32
2.5.1	Reference elements versus physical elements	32
2.5.2	Basis functions	35
2.5.3	Numerical quadrature	36
2.6	DG scheme	37
2.7	Properties	38
2.7.1	Coercivity of bilinear forms	38
2.7.2	Continuity of bilinear form	40
2.7.3	Local mass conservation	41
2.7.4	Existence and uniqueness of DG solution	42
2.8	Error analysis	42
2.8.1	Error estimates in the energy norm	42
2.8.2	Error estimates in the L^2 norm	46
2.9	Implementing the DG method	49
2.9.1	Data structure	49
2.9.2	Local matrices and right-hand sides	51
2.9.3	Global matrix and right-hand side	55
2.10	Numerical experiments	57
2.10.1	Smooth solution	57
2.10.2	Singular solution	58
2.10.3	Condition number	59
2.11	The local discontinuous Galerkin method	59
2.11.1	Definition of the mixed DG method	60
2.11.2	Existence and uniqueness of the solution	62
2.11.3	A priori error estimates	63
2.12	DG versus classical finite element method	64
2.13	Bibliographical remarks	67
	Exercises	67

II Parabolic Problems 69

3	Purely parabolic problems 71
3.1	Preliminaries 71
3.1.1	Functional spaces 71
3.1.2	Gronwall's inequalities 71
3.1.3	Taylor's expansions 72
3.1.4	Poincaré's inequalities 72
3.1.5	Inverse inequalities 73
3.2	Model problem 73
3.3	Semidiscrete formulation 73
3.3.1	A priori bounds 75

3.3.2	Error estimates	77
3.4	Fully discrete formulation	80
3.4.1	Backward Euler discretization	80
3.4.2	Forward Euler discretization	84
3.4.3	Crank–Nicolson discretization	86
3.4.4	Runge–Kutta discretization	87
3.4.5	DG in time discretization	88
3.5	Implementation	91
3.6	Bibliographical remarks	92
	Exercises	92
4	Parabolic problems with convection	95
4.1	Model problem	95
4.2	Semidiscrete formulation	96
4.2.1	Existence and uniqueness of solution	97
4.2.2	Consistency	97
4.2.3	Error estimates	98
4.3	Fully discrete formulation	100
4.3.1	Overshoot and undershoot	100
4.3.2	Slope limiters	101
4.3.3	An improved DG method	104
4.4	Bibliographical remarks	106
	Exercises	106
III	Applications	107
5	Linear elasticity	109
5.1	Preliminaries	109
5.1.1	Strain and stress tensors	109
5.1.2	Korn’s inequalities	110
5.2	Model problem	110
5.3	DG scheme	111
5.3.1	Consistency	112
5.3.2	Local equilibrium	112
5.3.3	Coercivity	112
5.4	Error analysis	113
5.5	Bibliographical remarks	115
	Exercises	115
6	Stokes flow	117
6.1	Preliminaries	117
6.1.1	Vector notation	117
6.1.2	Barycentric coordinates	117
6.1.3	An approximation operator of degree one	119
6.1.4	An approximation operator of higher degree	120

	6.1.5	Local L^2 projection	121
	6.1.6	General inf-sup condition	121
6.2		Model problem and weak solution	122
6.3		DG scheme	123
	6.3.1	Existence and uniqueness of solution	124
	6.3.2	Local mass conservation	124
6.4		Discrete inf-sup condition	125
6.5		Error estimates	126
6.6		Numerical results	129
6.7		Bibliographical remarks	129
		Exercises	130
7		Navier–Stokes flow	131
	7.1	Preliminaries	131
		7.1.1 Sobolev imbedding	131
		7.1.2 Hölder’s inequality	132
		7.1.3 Brouwer’s fixed point theorem	132
	7.2	Model problem and weak solution	133
	7.3	DG discretization	133
		7.3.1 Nonlinear convective term	134
		7.3.2 Scheme	136
		7.3.3 Consistency	136
	7.4	Existence and uniqueness of solution	136
		7.4.1 Existence of discrete velocity	136
		7.4.2 Existence of discrete pressure	137
		7.4.3 A priori bounds	138
		7.4.4 Uniqueness	138
	7.5	A priori error estimates	139
	7.6	Numerical experiments	140
		7.6.1 Effects of penalty size	140
		7.6.2 Step channel problem	141
	7.7	Bibliographical remarks	143
8		Flow in porous media	145
	8.1	Two-phase flow	145
		8.1.1 Model problem	146
		8.1.2 A sequential approach	148
		8.1.3 A coupled approach	150
		8.1.4 Numerical examples	151
	8.2	Miscible displacement	153
		8.2.1 Semidiscrete formulation	155
		8.2.2 A fully discrete approach	156
		8.2.3 Numerical examples	157
	8.3	Bibliographical remarks	158

A	Quadrature rules	159
A.1	Gauss quadrature rule on intervals	159
A.2	Quadrature rules on the reference triangle	159
A.3	Quadrature rule on the reference quadrilateral	161
B	DG codes	163
B.1	A MATLAB implementation for a one-dimensional problem	163
B.2	Selected C routines for higher dimensional problem	165
C	An approximation result	175
	Bibliography	179
	Index	189

List of Figures

2.1	Finite difference grid	27
2.2	Reference triangular element \hat{E} and physical element E	33
2.3	Reference quadrilateral element \hat{E} and physical element E	34
2.4	Example of a refinement/derefinement strategy for a triangular element	51
2.5	Example of a nonconforming mesh	51
2.6	Relative error in the L^2 norm versus the number of degrees of freedom	59
2.7	Condition number versus mesh size for NIPG 1: $\beta = 1$ (solid line) and $\beta = 3$ (dashed line)	60
2.8	Ratios of degrees of freedom for CG over DG with respect to the total number of degrees of freedom, computed on a uniform rectangular mesh	65
2.9	Rectangular mesh with hanging nodes (black dots)	66
2.10	Element numbers (left), edge numbers (middle), and normal directions (right)	68
4.1	Profiles of numerical concentration obtained for different Peclet numbers and different time discretizations: forward Euler (left), backward Euler (center), and Crank–Nicolson (right) with NIPG 0	101
4.2	Profiles of numerical concentration obtained with backward Euler (BE) and Crank–Nicolson (CN) and with NIPG 1 and $P_e = \infty$	101
4.3	DG solution before limiting Z_h (solid line) and after limiting \bar{Z}_h (dashed line)	102
4.4	Triangle configuration for building the limiter	103
4.5	Limited DG solution for NIPG 0: backward Euler (solid line), Crank–Nicolson (dashed line), and forward Euler (dotted line)	104
4.6	Limited DG solution for NIPG 1: backward Euler (solid line) and Crank–Nicolson (dashed line)	105
4.7	Mesh and diffusion coefficient: $D = 1$ in white regions and $D = 10^{-3}$ in black regions (left). Contours of standard NIPG solution (center) and improved NIPG solution (right)	106
6.1	Barycentric coordinates	118

7.1	Variations of the energy norm of numerical error in velocity with respect to the penalty value for NIPG (line with squares), SIPG (line with diamonds), and IIPG (line with circles)	140
7.2	Variations of the L^2 norm of numerical error in velocity with respect to the penalty value for NIPG (line with squares), SIPG (line with diamonds), and IIPG (line with circles)	141
7.3	Variations of the L^2 norm of numerical error in pressure with respect to the penalty value for NIPG (line with squares), SIPG (line with diamonds), and IIPG (line with circles)	141
7.4	Step channel problem setting	142
7.5	Pressure isocontours for NIPG 1 (top) and SIPG 10 (bottom)	142
7.6	Streamlines and velocity field for NIPG 1	143
8.1	Capillary pressure (left) and relative permeabilities (right) curves	147
8.2	Buckley–Leverett problem: exact solution (solid line), DG solution with $k_s = 1$ (dashed line), DG solution with $k_s = 2$ (dash-dotted line), and DG solution with $k_s = 3$ (solid line)	151
8.3	Permeability field and coarse mesh: permeability is 10^{-11} in white regions and 10^{-16} elsewhere	152
8.4	NIPG: wetting phase saturation contours at 35 days: $\sigma_e^0 = 0$ (left), $\sigma_e^0 = 10^{-5}$ (center), $\sigma_e^0 = 1$ (right)	152
8.5	Two-dimensional wetting phase saturation contours at 35 days for $\sigma_e^0 = 10^{-6}$: IIPG (left) and SIPG (right)	153
8.6	Five-spot problem: domain with coarse mesh	153
8.7	Five-spot problem: wetting phase pressure (left) and wetting phase saturation (right)	154
8.8	Mobility ratio 100: concentration contours	157
8.9	Mobility ratio 10: pressure contours (left) and concentration contours (right)	157
8.10	Mobility ratio 100: pressure contours (left) and concentration contours (right)	158

List of Tables

1.1	Convergence rates of primal DG method for uniform meshes in one dimension	13
1.2	Convergence rates of primal DG method for nonuniform meshes in one dimension	13
1.3	Numerical errors and convergence rates for piecewise linear approximation	14
1.4	Numerical errors and convergence rates for piecewise quadratic approximation	14
1.5	Numerical errors and convergence rates for piecewise cubic approximation	15
1.6	Numerical errors and convergence rates for piecewise quartic approximation	16
1.7	Numerical errors and convergence rates on nonuniform meshes	16
2.1	Weights and points for quadrature rule on reference triangle	37
2.2	Attributes of elements and faces for the data structure	50
2.3	Numerical errors and convergence rates for smooth function without superpenalization	57
2.4	Numerical errors and convergence rates for smooth function with superpenalization	58
2.5	Convergence rates of LDG method for piecewise polynomial approximation of degree greater than or equal to one	64
2.6	Convergence rates of LDG method for piecewise constant approximation	64
6.1	Numerical errors and convergence rates for Stokes velocity	130
6.2	Numerical errors and convergence rates for Stokes pressure	130
A.1	Gauss quadrature nodes and weights on the interval $(-1, 1)$	160
A.2	Quadrature weights and points for reference triangle	160

List of Algorithms

Algorithm 2.1	53
Algorithm 2.2	54
Algorithm 2.3	55
Algorithm 2.4	55
Algorithm 3.1	91
Algorithm 3.2	91
