Editors' Introduction..... 1

Part I Design Principles for Learning Environments

✕	From cognitive theory to educational technology	11
	<i>Stella Vosniadou</i>	
✕	Toward the integration of computers in powerful learning environment	19
	<i>Erik De Corte</i>	
	Learning with computer-based exploratory environments in science and mathematics	26
	<i>Vitor Duarte Teodoro</i>	
	Modelling, a means for expressing thinking: ESRC Tools for exploratory learning research programme	33
	<i>Joan Bliss</i>	
	Knowledge application in complex systems	40
	<i>Heinz Mandl, Hans Gruber, and Alexander Renkl</i>	
	Internalization and Learning Environments	48
	<i>Pierre Dillenbourg</i>	
	Learning: From interactivity to cooperation	55
	<i>Gellof Kanselaar and Gijsbert Erkens</i>	
	Peer interactions among adolescents using computer networks in an international role playing exercise	67
	<i>Judith Torney-Purta</i>	
	Implementing a model of cognitive development in an intelligent learning environment	72
	<i>Patrick Mendelson and Pierre Dillenbourg</i>	
	Differences in patterns: Studying computer enhanced learning environments	79
	<i>Gavriel Salomon</i>	

Part II Using Educational Technology to Promote Conceptual Change in the Physical Sciences

Multimedia environments for enhancing science instruction	89
<i>Susan R. Goldman, Anthony Petrosino, Robert D. Sherwood, Steve Garrison, Daniel T. Hickey, John D. Bransford, and James W. Pellegrino</i>	
The Mars Mission Challenge: A generative problem-solving school science environment	97
<i>Daniel T. Hickey, Anthony Petrosino, James W. Pellegrino, Susan R. Goldman, John D. Bransford, Robert D. Sherwood, and the Cognition and Technology Group at Vanderbilt</i>	
Studying and teaching model-based reasoning in science	104
<i>Kalyani Raghavan and Robert Glaser</i>	
Promoting studies on conceptual change	112
<i>Sigmar-Olaf Tergan and Uwe Oestermeier</i>	
Diagnosing students' physics knowledge and remediating learning difficulties: A computer-based approach	119
<i>G. Andaloro, L. Bellomonte, and R.M. Sperandeo-Mineo</i>	
Development of a learning environment for basic electricity	126
<i>João Loureiro</i>	
Development of an information system to help conceptual change concerning the human nervous system	134
<i>Teressa Bettencourt</i>	
Analysis of physics knowledge for learning environments	141
<i>Andrée Tiberghien</i>	
Integrating computer software tools in learning environments for meaningful learning	150
<i>Alexandros Barbas, Panagiotis Koumaras, and Dimitris Psillos</i>	
Ecoland: A hypermedia prototype for environmental education	157
<i>Donatella Cesarini</i>	

Part III Technology-Based Learning Environments for Knowledge Acquisition in Mathematics and in Language

Multimedia environments for enhancing student learning in mathematics	167
<i>Cognition and Technology Group at Vanderbilt</i>	
Tutoring mathematical text problems: From cognitive task analysis to didactic tools	174
<i>Kurt Reusser</i>	
Less can be more: Unintelligent tutoring based on psychological theories and experimentation	183
<i>Mitchell J. Nathan and Lauren B. Resnick</i>	
The use of an intermediate model for solving word problems	193
<i>Baruch B. Schwarz and Lauren B. Resnick</i>	
Qualitative analysis of children's learning of programming in the context of a developing culture of open-ended project work in a primary school	200
<i>C. Kynigos, G. Gyftodimos, and P. Georgiadis</i>	
Computer-assisted learning to read and write: A three-year longitudinal study	208
<i>Kenneth E. Sinclair</i>	
Computer facilitations of the writing process	216
<i>Alison Elliott</i>	
Flow driven English course	225
<i>Ryszard Stocki</i>	

Part IV Taking into Consideration the Needs of the Learner

Investigating the use of knowledge profiles in a flexible learning environment: Analyzing students' prior knowledge states	235
<i>Filip J.R.C. Dochy</i>	
Knowledge and learning skill student model	243
<i>M. Panagiotou, M. Grigoriadou, and G. Philokiprou</i>	
Semantic networks of action	250
<i>Charles Albert Tijus and Sebastien Poitrenaud</i>	
Representation systems in mathematics and science: The era of computers	260
<i>Haralambos Sakonidis</i>	
Use of graphics in computer aided learning in chemistry	268
<i>Josette Morinet Lambert</i>	
Effects of visible link-types on learning in hypertext systems	276
<i>Zhengmai Zhao</i>	
Knowledge construction and acquisition in a hypermedia environment customized for learning purposes	283
<i>George Gyftodimos and Maira Spiliopoulou</i>	
Hypertext learning environments and epistemic beliefs: A preliminary investigation	290
<i>Michael J. Jacobson and Rand J. Spiro</i>	
Investigating motivation and cooperation in computer-assisted learning: A pilot study	296
<i>Kim Issroff</i>
