Preface for Instructors	ix
Acknowledgements	xiii
Introduction	1
Chapter 1. Linear Algebra Review	5
§1.1. Vector Spaces	5
§1.2. Bases for Vector Spaces	8
§1.3. Linear Operators and Matrices	17
§1.4. The Rank of a Linear Operator and a Matrix	23
§1.5. Determinant and Trace	25
§1.6. Inner Products and Orthonormal Bases	27
§1.7. Orthogonal Direct Sum	34
§1.8. Exercises from the Text	36
§1.9. Additional Exercises	37
Chapter 2. Finite-Dimensional Operator Theory	41
§2.1. Linear Functionals and the Dual Space	41
§2.2. Riesz Representation Theorem and Adjoint Operators	43
§2.3. Self-adjoint and Unitary Operators	46
§2.4. Orthogonal Complements and Projections	52

§2.5.	The Moore-Penrose Inverse	59
§2.6.	Eigenvalues for Operators	60
§2.7.	Square Roots of Positive Operators	67
§2.8.	The Polar Decomposition	69
§2.9.	Traces of Operators	72
§2.10.	The Operator Norm	74
§2.11.	The Spectral Theorem	77
§2.12.	Exercises from the Text	81
§2.13.	Additional Exercises	82
Chapter 3.	Introduction to Finite Frames	87
§3.1.	\mathbb{R}^n -Frames	88
§3.2.	Parseval Frames	92
§3.3.	General Frames and the Canonical Reconstruction Formula	98
§3.4.	Frames and Matrices	104
§3.5.	Similarity and Unitary Equivalence of Frames	109
§3.6.	Frame Potential	113
§3.7.	Numerical Algorithms	118
§3.8.	Exercises from the Text	121
§3.9.	Additional Exercises	121
Chapter 4.	Frames in \mathbb{R}^2	123
§4.1.	Diagram Vectors	123
§4.2.	Equivalence of Frames	125
§4.3.	Unit Tight Frames with Four Vectors	129
§4.4.	Unit Tight Frames with k Vectors	131
§4.5.	Frame Surgery: Removals and Replacements	134
§4.6.	Fundamental Inequality in \mathbb{R}^2	137
§4.7.	Exercises from the Text	138
§4.8.	Additional Exercises	139
Chapter 5.	The Dilation Property of Frames	141

§5.1.	Orthogonal Compressions of Bases	141
§5.2.	Dilations of Frames	144
§5.3.	Frames and Oblique Projections	149
§5.4.	Exercises from the Text	152
§5.5.	Additional Exercises	152
Chapter 6.	Dual and Orthogonal Frames	155
§6.1.	Reconstruction Formula Revisited	155
§6.2.	Dual Frames	156
§6.3.	Orthogonality of Frames	163
§6.4.	Disjoint Frames	168
§6.5.	Super-Frames and Multiplexing	172
§6.6.	Parseval Dual Frames	174
§6.7.	Exercises from the Text	179
§6.8.	Additional Exercises	180
Chapter 7.	Frame Operator Decompositions	183
§7.1.	Continuity of Eigenvalues	184
§7.2.	Ellipsoidal Tight Frames	189
§7.3.	Frames with a Specified Frame Operator	196
§7.4.	Exercises	203
Chapter 8.	Harmonic and Group Frames	205
§8.1.	Harmonic Frames	205
§8.2.	Frame Representations and Group Frames	213
§8.3.	Frame Vectors for Unitary Systems	220
§8.4.	Exercises	226
Chapter 9.	Sampling Theory	229
§9.1.	An Instructive Example	229
§9.2.	Sampling of Polynomials	231
§9.3.	Sampling in Finite-Dimensional Spaces	236
§9.4.	An Application: Image Reconstruction	246

§9.5. Sampling in Infinite-Dimensional Spaces	253
§9.6. Exercises	263
Chapter 10. Student Presentations	265
§10.1. Eigenspace Decomposition	265
§10.2. Square Roots of Positive Operators	268
§10.3. Polar Decomposition	270
§10.4. Oblique Projections and Frames	274
§10.5. Vandermonde Determinant	277
Chapter 11. Anecdotes: Frame Theory Projects by Undergraduates	281
Bibliography	287
Index of Symbols	291
Index	293
