Volume I

	Foreword	v
	Preface	ix
	About the Editors	lv
	List of Authors	lxvii
Part 1	Principles and Theories	1
	Piotr Piotrowiak (Ed.)	
1	Electron Transfer: Theoretical Models and Computational Implementation	3
	<i>Marshall D. Newton</i>	
1.1	Introduction	3
1.2	Kinetic Schemes	7
1.3	Rate-Constant Models	10
1.3.1	System Hamiltonian and Electronic States	10
1.3.2	Diabatic Energy Surfaces	13
1.3.3	TST Models	16
1.3.4	Role of Solvent Dynamics	23
1.4	Coupling Elements	26
1.4.1	Basic Properties	26
1.4.2	Comparison of Thermal and Optical Processes	30
1.4.3	Pathway Analysis of T_{if}	34
1.5	Applications of Theory	38
1.5.1	Comparisons Based on Experimental Data	38

1.5.2	Computational Studies	44
1.6	Concluding Remarks	57
	Acknowledgments	58
	References.....	58
2	Adiabatic versus Non-Adiabatic Electron Transfer	64
	<i>Hitoshi Sumi</i>	
2.1	Adiabatic- versus Static-Coupling Scheme	64
2.2	Non-Adiabatic Limit	69
2.2.1	Single-Mode Model.....	69
2.2.2	Atom-Tunneling Regime	72
2.2.3	Semiclassical and Classical Regimes	74
2.2.4	Multimode Model	77
2.3	Adiabatic Limit.....	78
2.3.1	Semiclassical Regime	78
2.3.2	Attempt Frequency	80
2.4	From the Adiabatic to the Non-Adiabatic Limit.....	83
2.4.1	Adiabaticity Parameter.....	83
2.4.2	Between the Adiabatic and the Non-Adiabatic Limit	86
2.5	Further Development.....	91
2.5.1	Large-Energy-Quantum Intramolecular Modes	91
2.5.2	Electron Transfer to or from a Continuum of Free States	95
2.5.3	Solvent-Fluctuation-Controlled Regime	97
	Appendices.....	104
	Appendix A: Direct Derivation of Equation 23	104
	Appendix B: Wigner Distribution Function	104
	References.....	107
3	Single- and Multi-electron Transfer Processes	109
	<i>Spiros S. Skourtis and David N. Beratan</i>	
3.1	Introduction.....	109
3.2	Single-Electron Transfer Reactions	109
3.3	Multi-Electron Transfer Reactions.....	120
3.4	Conclusions	123
	Acknowledgments	123
	References.....	124
4	Electron Transfer at Electrodes and Interfaces	126
	<i>Daniël Vanmaekelbergh</i>	
4.1	Scope.....	126
4.2	Open Electron Systems	127
4.2.1	The Electrochemical Potential.....	127
4.2.2	Electronic Equilibrium between Two Phases	129
4.2.3	Deviations from Equilibrium.....	131

4.3	The Electronic Structure of Solids.....	132
4.3.1	Free and Independent Electrons.....	133
4.3.2	The Sommerfeld Model for Free Electrons in a Metallic Phase.....	134
4.3.3	Occupation of the Electron-Energy Levels.....	137
4.3.4	The Origin of Energy Bands.....	137
4.3.5	Metals, Semiconductors and Insulators.....	140
4.3.6	Extrinsic Semiconductors.....	141
4.4	Electron-Energy Levels Corresponding to a Redox System.....	142
4.4.1	The Electrochemical Potential of a Dissolved Redox System.....	143
4.4.2	The Fluctuating-Energy-Level Model Proposed by Gerischer.....	144
4.5	Interfacial Structure.....	149
4.5.1	Metal Surfaces.....	150
4.5.2	Physisorption and Chemisorption.....	154
4.5.3	The Metal/Solution Interface.....	155
4.5.4	The Semiconductor/Solution Interface.....	158
4.6	Electron Tunneling.....	161
4.6.1	The Probability of Electron Tunneling.....	161
4.6.2	Interfacial Electron Tunneling Between Two Metals.....	163
4.6.3	Experimental Tunneling Spectroscopy.....	165
4.7	Electrochemical Reactions: Kinetics and Mechanism.....	167
4.7.1	The Diversity of Electrochemical Processes.....	167
4.7.2	Electrochemical Ion Transfer and Electrochemical Electron Transfer (ECIT and ECET).....	169
4.7.3	Current Density vs Overpotential: Experimental Results.....	170
4.7.4	A Heuristic Treatment of Electrochemical Kinetics.....	171
4.8	Electron Transfer between a Metal and a Simple Redox System.....	176
4.8.1	Comparison between Electrochemical Electron Tunneling and Tunneling between Two Metals.....	176
4.8.2	Current Density as a Function of Overpotential.....	177
4.8.3	Marcus, Gerischer and the Phenomenological Rate Equations.....	181
4.9	Comparison of Electron Transfer at a Semiconductor With Electron Transfer at a Metal Electrode.....	182
	References.....	187
5	Proton-Coupled Electron Transfer	189
	<i>Sharon Hammes-Schiffer</i>	
5.1	Introduction.....	189
5.2	Continuum Theory for Single-Charge Transfer.....	191
5.2.1	Single-Electron Transfer.....	192
5.2.2	Single-Proton Transfer.....	195
5.3	Multistate Continuum Theory for Proton-Coupled Electron Transfer.....	198
5.3.1	Four-State Formulation.....	198
5.3.2	Two-State Formulation.....	201
5.3.3	Incorporation of Inner-Sphere Reorganization.....	207

5.3.4	Extension to More than Two Charge-Transfer Reactions.....	208
5.4	Applications of Proton-Coupled Electron Transfer in Solution.....	209
5.4.1	Calculation of Input Quantities.....	209
5.4.2	Proton-Coupled Electron Transfer through Asymmetric Salt Bridges.....	209
5.5	Fundamental Principles of Proton-Coupled Electron Transfer.....	212
5.6	Future Directions.....	213
	Acknowledgments.....	213
	References.....	213
6	Relationship between Electron and Electronic Excitation Transfer.....	215
	<i>Piotr Piotrowiak</i>	
6.1	Introduction.....	215
6.2	Singlet Energy Transfer.....	217
6.3	Triplet Energy Transfer.....	223
6.4	Summary.....	232
	Acknowledgments.....	233
	References.....	234
7	Charge-Transfer Excited States of Transition Metal Complexes.....	238
	<i>John F. Endicott</i>	
7.1	Definitions and General Concepts.....	238
7.1.1	Basic Concepts.....	238
7.1.2	The Idealized Limit of Weak D/A Electronic Coupling (LWEC).....	239
7.2	Charge-Transfer Absorption Spectroscopy.....	241
7.2.1	The Energies of Charge-Transfer Absorptions.....	241
7.2.2	Charge-Transfer Excited-State Terms and Assignments.....	244
7.2.3	The Analysis of Spectroscopic Absorption Bands.....	245
7.3	Charge-Transfer Emission Spectroscopy.....	247
7.3.1	The Interpretation of Charge-Transfer Emission Spectra.....	248
7.4	The Classification of Charge-Transfer Absorption Bands.....	248
7.5	The Electronic States Generated by Charge-Transfer Absorptions.....	248
7.5.1	The Franck–Condon State in Transition Metal Complexes.....	249
7.5.2	The Vibrationally Equilibrated Excited States (VEqES).....	249
7.6	Excited-State Relaxation Processes.....	249
7.6.1	Vibrationally Equilibrated Excited States Relaxation Processes.....	250
7.6.2	Upper-Excited-State Electronic-State Relaxation.....	251
7.7	Observations on the Weak Electronic Coupling Limit: Ion-Pair Charge-Transfer Absorption Bands.....	252
7.7.1	The Correlation of Observed Ion-Pair Charge-Transfer Energies with Experimental Electron-Transfer Parameters.....	252
7.7.2	Electronic Coupling in Ion-Pair Charge-Transfer Systems.....	253
7.7.3	Ion-Pair Charge-Transfer Absorption Band Widths.....	256
7.8	Ligand-to-Metal Charge-Transfer (LMCT) Absorption Bands.....	257
7.8.1	Energy Correlations for Simple Systems: $M^{III}(NH_3)_5(X^-)$ Complexes.....	257

7.8.2	More Complex Ligand-to-Metal Charge-Transfer (LMCT) Systems	259
7.8.3	Ligand-to-Metal Charge-Transfer (LMCT) Band Shapes and Intensities.....	261
7.9	Metal-to-Ligand Charge-Transfer (MLCT) Absorption Band Energies	261
7.9.1	General Comments	261
7.9.2	Metal-to-Ligand Charge-Transfer (MLCT) Excited-State Energies..	262
7.9.3	Band Shapes and Intensities	265
7.10	Excited-State Lifetimes and Luminescence Properties	265
7.11	Perspectives and Conclusions.....	266
	Acknowledgements.....	267
	References.....	267
8	Synthetic Applications of Photocatalytic Oxidation and Reduction Reactions of Organic Reactants on Irradiated Semiconductor Surfaces	271
	<i>Marye Anne Fox</i>	
8.1	Introduction	271
8.2	Principles Governing Photoelectrochemistry	273
8.2.1	Redox Reactions on Irradiated Semiconductor Surfaces	273
8.2.2	Comparison of a Photoelectrochemically Generated Electron-Hole Pair and a Molecular Excited State	277
8.2.3	Energy Considerations.....	278
8.2.4	Solvent Effects	280
8.2.5	Semiconductor Stability toward Catalytic Cycling.....	281
8.2.6	Photosensitization.....	281
8.3	Mechanism	282
8.4	Chemical Selectivity through Photoelectrochemical Activation	286
8.4.1	Adsorption and Surface Effects.....	286
8.4.2	Potential Control.....	290
8.4.3	Current Control.....	292
8.5	Selective Photoelectrochemical Transformations.....	293
8.5.1	Oxidations.....	294
8.5.2	Reductions	301
8.5.3	Cycloadditions and Retrocycloadditions	303
8.5.4	Geometric Isomerizations.....	304
8.5.5	Miscellaneous Reactions.....	305
8.6	Conclusions	305
	Acknowledgments.....	306
	References.....	307
9	Radiative Charge Recombination and Electrochemiluminescence	312
	<i>Ann-Margret Andersson and Russell H. Schmehl</i>	
9.1	Introduction	312
9.2	Processes Leading to Radiative Charge Recombination.....	313

9.2.1	Annihilation of Anion and Cation Radicals	313
9.2.2	Excimer and Exciplex Emission	314
9.2.3	Reactions of Radical Ions with Other Reagents	316
9.2.4	Chemically Induced Electron-Exchange Luminescence	317
9.3	Kinetic Aspects	319
9.4	Experimental Considerations: Techniques and Molecular Systems ...	323
9.4.1	Generation and Characterization of Reactive Species	323
9.4.2	Molecular Systems	328
9.5	Applications	331
9.5.1	Sensors for Organic Substrates Employing [Ru(bpy) ₃] ²⁺ and Derivatives	331
9.5.2	Sensors Employing Other ECL Chromophores	335
9.5.3	Device Applications	337
9.6	Summary	338
	Acknowledgments	338

Volume II

Part 1	Organic Molecules	1
	Jochen Mattay (Ed.)	
1	Reactivity Patterns of Radical Ions—A Unifying Picture of Radical-anion and Radical-cation Transformations	5
	<i>Michael Schmittel and Manas K. Ghorai</i>	
1.1	Introduction	5
1.2	A Unifying Picture of Radical-anion and Radical-cation Chemistry	5
1.3	A Construction Set of Electrophores and its Relevance for Devising Selective Reactions via Radical Ions	7
1.4	Reductive and Oxidative Bond-cleavage Reactions	14
1.4.1	General Principles of Bond Cleavage	14
1.4.2	Synthetic, Kinetic and Thermodynamic Aspects of Reductive Bond Cleavage	17
1.4.3	Synthetic, Kinetic and Thermodynamic Aspects of Oxidative Bond Cleavage	23
1.5	Reductive and Oxidative Bond-formation Reactions	29
1.5.1	General Principles of Bond Formation	29
1.5.2	Synthetic, Kinetic and Thermodynamic Aspects of Reductive Bond-formation	29
1.5.3	Synthetic, Kinetic, and Thermodynamic Aspects of Oxidative Bond-formation	33
1.6	Pericyclic Reactions	37
1.6.1	General Principles of Pericyclic Reactions	37
1.6.2	Synthetic, Kinetic and Thermodynamic Aspects	38
1.7	Conclusion	40
	Acknowledgments	40
	References	40
2	Electron Transfer from Aliphatic and Alicyclic Compounds	55
	<i>Heinz D. Roth</i>	
2.1	Introduction	55
2.2	Electron-transfer Reactions of Aliphatic Compounds	56
2.2.1	High-energy Irradiation of Matrices	56
2.2.2	Electron Spin Resonance	57
2.2.3	Electron-transfer Reactions of Methane	59
2.2.4	Electron-transfer Reactions of <i>n</i> -Alkanes	61
2.2.5	Deprotonation of <i>n</i> -Alkane Radical Cations	66
2.2.6	Electron-transfer Reactions of Branched Alkanes	68
2.2.7	Electron Transfer from Alkanes to Zeolites	69
2.3	Electron-transfer Reactions of Cycloalkanes	71
2.3.1	Electron Transfer from C ₃ –C ₈ Prototype Cycloalkanes	72

2.3.2	Cyclopropane Radical Cations	77
2.3.3	Electron-transfer Reactions of Substituted Cyclobutane Systems	97
2.3.4	Electron-transfer Reactions of Cycloalkanes in Zeolites	99
2.4	Electron-transfer Reactions of Bicyclic Systems	100
2.4.1	Electron Transfer of Strained Bicyclic Systems	101
2.4.2	Electron Transfer of Unstrained Bicyclic Systems	116
2.4.3	Electron-transfer Chemistry of Bicyclic and Higher Ring Systems ...	118
2.4.4	Triplet Recombination of Radical Ion Pairs	124
2.4.5	Concluding Remarks	126

Volume V

Part 1	Molecular-Level Electronics	1
	A. Prasanna de Silva (Ed.)	
1	Wires Based on Metal Complexes	3
	<i>Jean-Pierre Launay and Christophe Coudret</i>	
1.1	Introduction.....	3
1.2	Bimetallic Metal Complexes as Models of Molecular Wires.....	4
1.3	Synthetic Strategies.....	6
1.3.1	Redox Centers.....	7
1.3.2	Conjugated Bridges.....	12
1.4	Theory.....	20
1.4.1	Outline of the Theoretical Treatment of Mixed-valence Compounds	20
1.4.2	Processes Related to the V_{ab} Coupling.....	22
1.5	Review of the Different Studies.....	26
1.5.1	Intervalence Electron Transfer.....	26
1.5.2	Electron Transfer through a Monolayer at an Electrode.....	33
1.5.3	Excited-state Electron Transfer.....	34
1.5.4	Dexter-type Energy Transfer.....	35
1.5.5	Other Effects.....	36
1.6	Conclusions.....	38
1.6.1	The Decay Law.....	38
1.6.2	Cyclometallated Compounds.....	42
1.6.3	Puzzling Compounds.....	43
1.6.4	Mixed-valence Complexes and Metal/Molecule/Metal Nanjunctions.....	43
	References.....	44
2	Approaches to an Optically Controlled Molecular Switch	48
	<i>Aaron S. Lukas and Michael R. Wasielewski</i>	
2.1	Introduction.....	48
2.2	Systems Consisting of Single Molecules.....	50
2.2.1	Two-level Systems.....	50
2.3	Photochromic Systems.....	51
2.3.1	Photoisomerizations.....	52
2.3.2	Open–Closed Ring Systems.....	55
2.3.3	Photorearrangements.....	59
2.4	Electron Transfer Based Systems.....	59
2.4.1	Intermolecular Electron Transfer.....	60
2.4.2	Intramolecular Electron Transfer.....	61
2.5	Energy Transfer Based Systems.....	73
2.6	Conclusions and Future Prospects.....	88
	Acknowledgment	89
