

CONTENTS

Preface	v
A. The root as an integral part of the plant	1
T. JEŠKO	
A.1. Origin of the root and shoot organs	1
A.2. Root–shoot relationships	5
A.2.1. Exchange of inorganic substances	5
A.2.1.1. Water	6
A.2.1.2. Mineral nutrients	8
A.2.1.3. Gases	10
A.2.2. Exchange of organic substances	12
A.2.2.1. Assimilate production and sources of energy	12
A.2.2.2. Translocation of assimilates between the shoot and the root	14
A.2.3. Distribution of assimilates between the root and the shoot	25
A.2.3.1. Root:shoot growth ratio	25
A.2.3.2. Hormonal control of growth and development of the root and the shoot (J. Šebánek, T. Ješko)	27
B. Root structure	31
M. LUXOVÁ and M. ČIAMPOROVÁ	
B.1. Primary structure	31
B.1.1. Root apex (M. Luxová)	31
B.1.1.1. Root meristem (M. Luxová, M. Čiamporová)	32
B.1.1.2. Cell enlargement (M. Luxová, M. Čiamporová)	41
B.1.1.3. The root cap (M. Luxová)	45
B.1.2. Primary tissues (M. Luxová)	48
B.1.2.1. Epidermis (M. Čiamporová)	49
B.1.2.2. Primary cortex (M. Luxová)	52

B.1.2.3	The central cylinder (M. Čiamporová)	59
B.1.2.4	Course of differentiation of vascular tissues (M. Čiamporová)	69
B.1.2.5	Changes in vascular pattern along the root axis (M. Luxová)	70
B.1.2.6	Transfer cells (M. Luxová)	73
B.2	Secondary structure (M. Luxová)	75
B.2.1	Development and function of vascular cambium	75
B.2.1.1	Secondary xylem	77
B.2.1.2	Secondary phloem	78
B.2.2	Phellogen	78
B.3	Development of the root system (M. Luxová)	78
C.	Root metabolism	82
O. GAŠPARÍKOVÁ		
C.1	Metabolism of growing root cells	82
C.1.1	Carbohydrates	84
C.1.2	Polysaccharides; chemical composition of the cell wall	85
C.1.3	Fatty acids	89
C.1.4	Amino acids and amines	91
C.1.5	Nucleic acids	92
C.1.6	Proteins	96
C.1.7	Formation of enzyme systems in growing and maturing root cells	100
C.1.7.1	Enzymes of glycolysis and the pentose phosphate cycle	101
C.1.7.2	Enzymes of the Krebs cycle and the mitochondrial electron transport chain	103
C.1.7.3	Enzymes of nitrogen assimilation	104
C.1.7.4	Hydrolases	105
C.1.7.5	Proton ATPases and pyrophosphatase	107
C.2	Metabolism of mature root cells	110
C.2.1	Respiration and oxidative phosphorylation, the main sources of energy in root tissues	112
C.2.1.1	Transport of ADP and inorganic phosphate into mitochondria	114
C.2.2	Carbon metabolism and absorption of ions	116
C.2.3	Nitrogen assimilation	118

C.2.3.1 Nitrate reduction	118
C.2.3.2 Biological nitrogen fixation	121
C.2.3.3 Ammonia assimilation	124
C.2.3.4 Amino acid biosynthesis	126
C.2.4 Metabolic activity of the cortex and stele	127
D. Uptake and transport of water	129
V. KOZINKA	
D.1 Entry of water into the plant	130
D.1.1 Chemical potential of water	130
D.1.2 Water potential	132
D.2 The plant as a hydraulic system	134
D.2.1 The capacity of water storage	136
D.3 Water movement in the root	138
D.3.1 Penetration of water through root cell membranes	140
D.4 Radial movement of water in the root	142
D.4.1 Pathways of radial movement of water	143
D.4.2 Epidermis and root hairs	149
D.4.3 Penetration of water through the endodermis	153
D.4.4 Hypodermis (exodermis)	156
D.4.5 Penetration of water into the central cylinder	157
D.4.6 Entry of water into the xylem	159
D.4.7 Connected movement of water and solutes in the central cylinder	160
D.5 Longitudinal flow of water in the root	162
D.5.1 Xylem as the tissue of longitudinal water flow	162
D.5.2 Driving forces of the longitudinal water flow	165
D.5.3 Cell walls as a potential pathway of longitudinal water transport	171
D.5.4 Resistance to axial water flow in vessels and tracheids	172
D.6 Water uptake by the intact plant	175
D.6.1 Excised root exudation — the root as an osmometer	175
D.6.2 Water uptake by a transpiring plant	178
D.6.3 Water uptake by the root system of aquatic angiosperms	179
D.7 Water uptake by the individual root	180
D.7.1 Young roots and absorption zone	181

D.7.2	Water uptake through suberized roots	182
D.7.3	Water uptake by the root system	185
D.7.4	Water uptake by other plant organs	188
D.8	Resistance to water flow in roots and shoots	189
D.8.1	Resistance to water flow in roots of an intact plant	189
D.8.2	Resistance to water flow in a detached root system	191
D.8.3	Resistance to water flow in different parts of a single root	193
D.9	Water uptake by roots from the soil	194
D.9.1	Water flows in the soil	196
D.9.2	The root–soil interface	200
D.9.3	Root growth in the soil	202
E.	Ion uptake and transport	204
J. KOLEK and M. HOLOBRADÁ		
E.1	Soil solution (J. Kolek)	205
E.1.1	Root exudates (J. Kolek)	208
E.1.2	Mycorrhiza (J. Kolek, M. Holobradá)	209
E.2	Passive movement of ions and solutions (J. Kolek)	211
E.2.1	Diffusion	211
E.2.2	Donnan free space	212
E.2.3	Osmotic pressure gradient	212
E.3	Active transport (J. Kolek)	213
E.3.1	Membrane structure and function (J. Kolek, M. Holobradá)	214
E.3.2	Carrier-mediated transport theory and the ki- netics of ion uptake (J. Kolek, M. Holobradá)	222
E.3.3	Ionic pumps (J. Kolek)	228
E.3.4	Ion transport in the cell (J. Kolek)	231
E.4	Specificity of ion uptake (J. Kolek)	237
E.4.1	Effect of accompanying ion on uptake (M. Holobradá)	238
E.4.2	Nutritional status (J. Kolek)	239
E.4.3	Regulation of ion uptake by metabolites (M. Holobradá)	241
E.4.4	Role of growth substances in ion transport (J. Kolek, M. Holobradá)	242

E.4.5	Cation uptake and transport (J. Kolek, M. Holobradá)	244
E.4.6	Nitrogen uptake and transport (M. Holobradá)	251
E.4.7	Sulphur uptake and transport (M. Holobradá)	255
E.4.8	Phosphate uptake and transport (J. Kolek, M. Holobradá)	259
E.5	Structural relations of ion transport (M. Holobradá)	262
E.5.1	Role of apparent free space	262
E.5.1.1	Active ion uptake from the apparent free space into the protoplast and its metabolic control	263
E.5.2	Metabolic control of ion transport in tissues	264
E.5.3	Radial transport	265
E.5.4	Structural relations of radial transport	268
E.5.4.1	Epidermis	269
E.5.4.2	Cortex	270
E.5.4.3	Endodermis	271
E.5.4.4	Pericycle	273
E.5.4.5	Stelar parenchyma cells	274
E.5.5	Transport in the xylem	278
E.5.6	Zonality of uptake and transport	279
E.5.7	Uptake and transport in various root types	283
F.	The root in unfavourable conditions	286
I.	MISTRÍK, M. HOLOBRADÁ and M. ČIAMPOROVÁ	
F.1	Low temperature (I. Mistrík)	286
F.1.1	Structural changes (I. Mistrík, M. Čiamporová)	287
F.1.2	Metabolic changes (I. Mistrík)	289
F.2	Drought (I. Mistrík)	295
F.2.1	Effects of drought on cell structure (I. Mistrík, M. Čiamporová)	295
F.2.2	Metabolic changes (I. Mistrík)	298
F.3	The root under conditions of salinity (M. Holobradá)	300
F.3.1	Mechanism of the effects of salinity	301
F.3.2	Structural changes	302
F.3.3	Ion uptake and transport	303
F.3.4	Metabolic changes in salinity	305
F.4	Oxygen deficiency (I. Mistrík)	308

F.4.1 Structural changes (I. Mistrík, M. Čiam- porová)	309
F.4.2 Metabolic changes (I. Mistrík)	310
