

# Contents

<b>1</b>	<b>Introduction</b> .....	1
<b>2</b>	<b>Physical Faults and Functional Errors</b> .....	5
2.1	Stuck-At Faults .....	6
2.2	Bridging Faults .....	10
2.2.1	Non-Resistive Bridging Faults .....	10
2.2.2	Resistive Bridging Faults .....	13
2.3	CMOS Stuck-Open and Stuck-On Faults .....	17
2.4	Delay Faults .....	21
2.5	Transient Faults .....	22
2.6	Functional Error Model .....	22
2.7	Output Dependencies .....	24
2.8	Self-Testing and Self-Checking .....	25
2.9	Faults and Errors in Submicron Technologies .....	27
<b>3</b>	<b>Principles of Concurrent Checking</b> .....	31
3.1	Duplication and Comparison .....	31
3.1.1	Description of the Method .....	32
3.1.2	Comparators and Two-Rail Checkers .....	33
3.1.3	Method of Partial Duplication .....	40
3.2	Block Codes for Error Detection .....	42
3.2.1	Classical Error Detection Codes .....	42
3.2.2	Non-linear Split Error Detection Codes .....	49
3.3	Parity and Group Parity Checking .....	53
3.3.1	Predictor and Generator Circuits .....	55
3.3.2	Parity Prediction .....	57
3.3.3	Generalized Circuit Graph .....	60
3.3.4	Independent Outputs and Weakly Independent Outputs .....	62
3.3.5	Determination of Groups of Weakly Independent Outputs ..	66
3.3.6	Circuit Modification by Node-Splitting .....	70
3.3.7	Further Methods for the Determination of Weakly Independent Outputs .....	73

3.4	Odd and Even Error Detection . . . . .	75
3.4.1	Description of Odd and Even Error Detection . . . . .	75
3.5	Code-Disjoint Circuits . . . . .	77
3.5.1	Design of Code-Disjoint Circuits . . . . .	78
3.6	Error Detection by Complementary Circuits . . . . .	84
3.6.1	Error Detection by Use of Complementary Circuits . . . . .	85
3.6.2	Complementary Circuits for 1-out-of-3 Codes . . . . .	87
3.6.3	Conditions for the Existence of Totally Self-Checking Error Detection Circuits by Complementary Circuits . . . . .	90
3.7	General Method for the Design of Error Detection Circuits . . . . .	98
3.7.1	Description of the Method . . . . .	98
3.8	Self-Dual Error Detection . . . . .	102
3.8.1	Self-Dual Boolean Functions . . . . .	103
3.8.2	Transformation of a Given Circuit into a Self-Dual Circuit . . . . .	104
3.8.3	Self-Dual Error Detection Circuits . . . . .	107
3.8.4	Self-Dual Fault-Secure Circuits . . . . .	109
3.9	Error Detection with Soft Error Correction . . . . .	116
3.9.1	Description of the Method . . . . .	116
<b>4</b>	<b>Concurrent Checking for the Adders . . . . .</b>	<b>123</b>
4.1	Basic Types of Adders . . . . .	124
4.2	Parity Checking for Adders . . . . .	135
4.3	Self-Checking Adders . . . . .	138
4.3.1	Self-Checking Carry Look-Ahead Adders . . . . .	138
4.3.2	Self-Checking Partially Duplicated Carry Skip Adder . . . . .	151
4.3.3	Self-Checking Carry Select Adders . . . . .	156
	<b>References . . . . .</b>	<b>173</b>
	<b>Index . . . . .</b>	<b>179</b>
