

CONTENTS

Foreword	5
I. Introduction	9
II. Sentential Logic.	11
1. Terminology	11
2. Logical Negation	12
3. Logical Conjunction (logical product)	15
4. Logical Disjunction	17
5. The Principle of Logical Contradiction	22
6. The Principle of 'Tertium Non Datur'	23
7. Logical Implication	25
8. Logical Equivalence.	28
9. The Utterance and Semiotics.	29
10. The Laws of Commutation, Association, Distribution and Transitivity	31
11. Normal Forms in Formal Logic	37
III. Predicate Calculus.	43
A. Argument and Predicate	43
B. The Quantifiers 'all' and 'exists'	44
C. Semantic Equivalence	47
D. Logic of Classes	49
1. The Notion of Class and Classification	49
2. Extension and Intension of a Concept	51
3. Class Identity	51

4. Inclusion	51
5. Sum of Classes	52
6. Product of Classes	53
7. Complement of a Class	54
E. Logic of Relations	55
1. Inclusion of Relations	56
2. Sum of Relations	57
3. Product of Relations	58
4. Identical Relations	58
5. The Complement of a Relation	58
6. The Universal Relation	59
7. The Null Relation	59
8. The Converse of a Relation	59
9. The Relative Product of Relations	59
10. The Properties of Relations	61
IV. Higher Predicate Calculus	64
1. Preliminary Observations	64
2. Mapping	65
3. The Notion of Heredity	66
V. Deduction in Formal Logic	68
VI. Sentential Calculus and Axiomatization	72
1. Explication and Definition	72
2. Sentential Calculus	73
3. Axiomatization	74
VII. Further Examples	77
Bibliography	91
