Contents

Preface

PART 1: MATHEMATICAL PRELIMINARIES

1 Vectors and Tensors
   1.1. Vector Algebra
   1.2. Coordinate Transformation: Rotation of Axes
   1.3. Second-Rank Tensors
   1.4. Symmetric and Antisymmetric Tensors
   1.5. Prelude to Invariants of Tensors
   1.6. Inverse of a Tensor
   1.7. Additional Proofs
   1.8. Additional Lemmas for Vectors
   1.9. Coordinate Transformation of Tensors
   1.10. Some Identities with Indices
   1.11. Tensor Product
   1.12. Orthonormal Basis
   1.13. Eigenvectors and Eigenvalues
   1.14. Symmetric Tensors
   1.15. Positive Definiteness of a Tensor
   1.16. Antisymmetric Tensors
      1.16.1. Eigenvectors of W
   1.17. Orthogonal Tensors
   1.18. Polar Decomposition Theorem
   1.19. Polar Decomposition: Physical Approach
      1.19.1. Left and Right Stretch Tensors
      1.19.2. Principal Stretches
   1.20. The Cayley–Hamilton Theorem
   1.21. Additional Lemmas for Tensors
   1.22. Identities and Relations Involving $\nabla$ Operator
   1.23. Suggested Reading

page xix
2  Basic Integral Theorems
   2.1.  Gauss and Stokes's Theorems
      2.1.1. Applications of Divergence Theorem
   2.2.  Vector and Tensor Fields: Physical Approach
   2.3.  Surface Integrals: Gauss Law
   2.4.  Evaluating Surface Integrals
      2.4.1. Application of the Concept of Flux
   2.5.  The Divergence
   2.6.  Divergence Theorem: Relation of Surface to Volume
         Integrals
   2.7.  More on Divergence Theorem
   2.8.  Suggested Reading

3  Fourier Series and Fourier Integrals
   3.1.  Fourier Series
   3.2.  Double Fourier Series
      3.2.1. Double Trigonometric Series
   3.3.  Integral Transforms
   3.4.  Dirichlet's Conditions
   3.5.  Integral Theorems
   3.6.  Convolution Integrals
      3.6.1. Evaluation of Integrals by Use of Convolution
             Theorems
   3.7.  Fourier Transforms of Derivatives of \( f(x) \)
   3.8.  Fourier Integrals as Limiting Cases of Fourier Series
   3.9.  Dirac Delta Function
   3.10. Suggested Reading

PART 2: CONTINUUM MECHANICS

4  Kinematics of Continuum
   4.1.  Preliminaries
   4.2.  Uniaxial Strain
   4.3.  Deformation Gradient
   4.4.  Strain Tensor
   4.5.  Stretch and Normal Strains
   4.6.  Angle Change and Shear Strains
   4.7.  Infinitesimal Strains
   4.8.  Principal Stretches
   4.9.  Eigenvectors and Eigenvalues of Deformation Tensors
   4.10. Volume Changes
   4.11. Area Changes
   4.13. Simple Shear of a Thick Plate with a Central Hole
   4.14. Finite vs. Small Deformations
   4.15. Reference vs. Current Configuration
   4.16. Material Derivatives and Velocity
   4.17. Velocity Gradient

</table>
6.8. Gibbs Conditions of Thermodynamic Equilibrium  
6.9. Linear Thermoelasticity  
6.10. Thermodynamic Potentials in Linear Thermoelasticity  
6.10.1. Internal Energy  
6.10.2. Helmholtz Free Energy  
6.10.3. Gibbs Energy  
6.10.4. Enthalpy Function  
6.11. Uniaxial Loading and Thermoelastic Effect  
6.15. Configurational Entropy  
6.16. Ideal Solutions  
6.17. Regular Solutions for Binary Alloys  
6.18. Suggested Reading  

7 Nonlinear Elasticity  
7.1. Green Elasticity  
7.2. Isotropic Green Elasticity  
7.3. Constitutive Equations in Terms of B  
7.4. Constitutive Equations in Terms of Principal Stretches  
7.5. Incompressible Isotropic Elastic Materials  
7.6. Elastic Moduli Tensors  
7.7. Instantaneous Elastic Moduli  
7.8. Elastic Pseudomoduli  
7.9. Elastic Moduli of Isotropic Elasticity  
7.10. Elastic Moduli in Terms of Principal Stretches  
7.11. Suggested Reading  

PART 3: LINEAR ELASTICITY  

8 Governing Equations of Linear Elasticity  
8.1. Elementary Theory of Isotropic Linear Elasticity  
8.2. Elastic Energy in Linear Elasticity  
8.3. Restrictions on the Elastic Constants  
8.3.1. Material Symmetry  
8.3.2. Restrictions on the Elastic Constants  
8.4. Compatibility Relations  
8.5. Compatibility Conditions: Cesàro Integrals  
8.6. Beltrami–Michell Compatibility Equations  
8.7. Navier Equations of Motion  
8.8. Uniqueness of Solution to Linear Elastic Boundary Value Problem  
8.8.1. Statement of the Boundary Value Problem  
8.8.2. Uniqueness of the Solution  
8.9. Potential Energy and Variational Principle  
8.9.1. Uniqueness of the Strain Field  

8.10. Betti's Theorem of Linear Elasticity 
8.11. Plane Strain 
  8.11.1. Plane Stress 
8.13. Thermal Distortion of a Simple Beam 
8.14. Suggested Reading 

9 Elastic Beam Problems 
  9.1. A Simple 2D Beam Problem 
  9.2. Polynomial Solutions to $\nabla^4 \phi = 0$ 
  9.3. A Simple Beam Problem Continued 
    9.3.1. Strains and Displacements for 2D Beams 
  9.4. Beam Problems with Body Force Potentials 
  9.5. Beam under Fourier Loading 
  9.6. Complete Boundary Value Problems for Beams 
    9.6.1. Displacement Calculations 
  9.7. Suggested Reading 

10 Solutions in Polar Coordinates 
  10.1. Polar Components of Stress and Strain 
  10.2. Plate with Circular Hole 
    10.2.1. Far Field Shear 
    10.2.2. Far Field Tension 
  10.3. Degenerate Cases of Solution in Polar Coordinates 
  10.4. Curved Beams: Plane Stress 
    10.4.1. Pressurized Cylinder 
    10.4.2. Bending of a Curved Beam 
  10.5. Axisymmetric Deformations 
  10.6. Suggested Reading 

11 Torsion and Bending of Prismatic Rods 
  11.1. Torsion of Prismatic Rods 
  11.2. Elastic Energy of Torsion 
  11.3. Torsion of a Rod with Rectangular Cross Section 
  11.4. Torsion of a Rod with Elliptical Cross Section 
  11.5. Torsion of a Rod with Multiply Connected Cross Sections 
    11.5.1. Hollow Elliptical Cross Section 
  11.6. Bending of a Cantilever 
  11.7. Elliptical Cross Section 
  11.8. Suggested Reading 

12 Semi-Infinite Media 
  12.1. Fourier Transform of Biharmonic Equation 
  12.2. Loading on a Half-Plane 
  12.3. Half-Plane Loading: Special Case 
  12.4. Symmetric Half-Plane Loading 
  12.5. Half-Plane Loading: Alternative Approach 
  12.6. Additional Half-Plane Solutions
12.6.1. Displacement Fields in Half-Spaces 238
12.6.2. Boundary Value Problem 239
12.6.3. Specific Example 240
12.7. Infinite Strip 242
12.7.1. Uniform Loading: \(-a \leq x \leq a\) 243
12.7.2. Symmetrical Point Loads 244
12.8. Suggested Reading 245

13 Isotropic 3D Solutions 246
13.1. Displacement-Based Equations of Equilibrium 246
13.2. Boussinesq–Papkovich Solutions 247
13.3. Spherically Symmetrical Geometries 248
13.3.1. Internally Pressurized Sphere 249
13.4. Pressurized Sphere: Stress-Based Solution 251
13.4.1. Pressurized Rigid Inclusion 252
13.4.2. Disk with Circumferential Shear 253
13.4.3. Sphere Subject to Temperature Gradients 254
13.5. Spherical Indentation 254
13.5.1. Displacement-Based Equilibrium 255
13.5.2. Strain Potentials 256
13.5.3. Point Force on a Half-Plane 257
13.5.4. Hemispherical Load Distribution 258
13.5.5. Indentation by a Spherical Ball 259
13.6. Point Forces on Elastic Half-Space 261
13.7. Suggested Reading 263

14 Anisotropic 3D Solutions 264
14.1. Point Force 264
14.2. Green's Function 264
14.3. Isotropic Green’s Function 268
14.4. Suggested Reading 270

15 Plane Contact Problems 271
15.1. Wedge Problem 271
15.2. Distributed Contact Forces 274
15.2.1. Uniform Contact Pressure 275
15.2.2. Uniform Tangential Force 277
15.3. Displacement-Based Contact: Rigid Flat Punch 277
15.4. Suggested Reading 279

16 Deformation of Plates 280
16.1. Stresses and Strains of Bent Plates 280
16.2. Energy of Bent Plates 281
16.3. Equilibrium Equations for a Plate 282
16.4. Shear Forces and Bending and Twisting Moments 285
16.5. Examples of Plate Deformation 287
16.5.1. Clamped Circular Plate 287
16.5.2. Circular Plate with Simply Supported Edges 288
16.5.3. Circular Plate with Concentrated Force  288
16.5.4. Peeled Surface Layer  288
16.6. Rectangular Plates  289
  16.6.1. Uniformly Loaded Rectangular Plate  290
16.7. Suggested Reading  291

PART 4: MICROMECHANICS

17 Dislocations and Cracks: Elementary Treatment  293
  17.1. Dislocations  293
    17.1.1. Derivation of the Displacement Field  294
  17.2. Tensile Cracks  295
  17.3. Suggested Reading  298

18 Dislocations in Anisotropic Media  299
  18.1. Dislocation Character and Geometry  299
  18.2. Dislocations in Isotropic Media  302
    18.2.1. Infinitely Long Screw Dislocations  302
    18.2.2. Infinitely Long Edge Dislocations  303
    18.2.3. Infinitely Long Mixed Segments  303
  18.3. Planar Geometric Theorem  305
  18.4. Applications of the Planar Geometric Theorem  308
    18.4.1. Angular Dislocations  311
  18.5. A 3D Geometrical Theorem  312
  18.6. Suggested Reading  314

19 Cracks in Anisotropic Media  315
  19.1. Dislocation Mechanics: Reviewed  315
  19.2. Freely Slipping Crack  316
  19.3. Crack Extension Force  319
  19.4. Crack Faces Loaded by Trawctions  320
  19.5. Stress Intensity Factors and Crack Extension Force  322
    19.5.1. Computation of the Crack Extension Force  323
  19.6. Crack Tip Opening Displacement  325
  19.7. Dislocation Energy Factor Matrix  325
  19.8. Inversion of a Singular Integral Equation  328
  19.9. 2D Anisotropic Elasticity – Stroh Formalism  329
    19.9.1. Barnett–Lothe Tensors  332
  19.10. Suggested Reading  334

20 The Inclusion Problem 335
  20.1. The Problem 335
  20.2. Eshelby's Solution Setup 336
  20.3. Calculation of the Constrained Fields: $u^c$, $e^c$, and $\sigma^c$ 338
  20.4. Components of the Eshelby Tensor for Ellipsoidal Inclusion 341
  20.5. Elastic Energy of an Inclusion 343
  20.6. Inhomogeneous Inclusion: Uniform Transformation Strain 343
  20.7. Nonuniform Transformation Strain Inclusion Problem 345
    20.7.1. The Cases $M = 0, 1$ 349
20.8. Inclusions in Isotropic Media
   20.8.1. Constrained Elastic Field 350
   20.8.2. Field in the Matrix 350
   20.8.3. Field at the Interface 351
   20.8.4. Isotropic Spherical Inclusion 352
20.9. Suggested Reading 353

21 Forces and Energy in Elastic Systems 354
   21.2. Forces of Translation 355
      21.2.1. Force on an Interface 357
      21.2.2. Finite Deformation Energy Momentum Tensor 359
   21.3. Interaction Between Defects and Loading Mechanisms 360
      21.3.1. Interaction Between Dislocations and Inclusions 362
      21.3.2. Force on a Dislocation Segment 364
   21.4. Elastic Energy of a Dislocation 365
   21.5. In-Plane Stresses of Straight Dislocation Lines 366
   21.6. Chemical Potential 367
      21.6.1. Force on a Defect due to a Free Surface 369
   21.7. Applications of the $J$ Integral 371
      21.7.1. Force on a Clamped Crack 372
      21.7.2. Application of the Interface Force to Precipitation 372
   21.8. Suggested Reading 374

22 Micropolar Elasticity 375
   22.1. Introduction 375
   22.2. Basic Equations of Couple-Stress Elasticity 376
   22.3. Displacement Equations of Equilibrium 377
   22.4. Correspondence Theorem of Couple-Stress Elasticity 378
   22.5. Plane Strain Problems of Couple-Stress Elasticity 379
      22.5.1. Mindlin's Stress Functions 380
   22.6. Edge Dislocation in Couple-Stress Elasticity 381
      22.6.1. Strain Energy 382
   22.7. Edge Dislocation in a Hollow Cylinder 384
   22.8. Governing Equations for Antiplane Strain 386
      22.8.1. Expressions in Polar Coordinates 388
      22.8.2. Correspondence Theorem for Antiplane Strain 389
   22.9. Antiplane Shear of Circular Annulus 390
   22.10. Screw Dislocation in Couple-Stress Elasticity 391
      22.10.1. Strain Energy 392
   22.11. Configurational Forces in Couple-Stress Elasticity 392
      22.11.1. Reciprocal Properties 393
      22.11.2. Energy due to Internal Sources of Stress 394
      22.11.3. Energy due to Internal and External Sources of Stress 394
      22.11.4. The Force on an Elastic Singularity 395
22.12. Energy-Momentum Tensor of a Couple-Stress Field 396
22.13. Basic Equations of Micropolar Elasticity 398
22.14. Noether's Theorem of Micropolar Elasticity 400
22.15. Conservation Integrals in Micropolar Elasticity 403
22.16. Conservation Laws for Plane Strain Micropolar Elasticity 404
22.17. M Integral of Micropolar Elasticity 404
22.18. Suggested Reading 406

PART 5: THIN FILMS AND INTERFACES

23 Dislocations in Bimaterials 407
23.1. Introduction 407
23.2. Screw Dislocation Near a Bimaterial Interface 407
23.2.1. Interface Screw Dislocation 409
23.2.2. Screw Dislocation in a Homogeneous Medium 409
23.2.3. Screw Dislocation Near a Free Surface 409
23.2.4. Screw Dislocation Near a Rigid Boundary 410
23.3. Edge Dislocation (b_x) Near a Bimaterial Interface 410
23.3.1. Interface Edge Dislocation 415
23.3.2. Edge Dislocation in an Infinite Medium 417
23.3.3. Edge Dislocation Near a Free Surface 417
23.3.4. Edge Dislocation Near a Rigid Boundary 418
23.4. Edge Dislocation (b_y) Near a Bimaterial Interface 419
23.4.1. Interface Edge Dislocation 420
23.4.2. Edge Dislocation in an Infinite Medium 422
23.4.3. Edge Dislocation Near a Free Surface 422
23.4.4. Edge Dislocation Near a Rigid Boundary 423
23.5. Strain Energy of a Dislocation Near a Bimaterial Interface 423
23.5.1. Strain Energy of a Dislocation Near a Free Surface 426
23.6. Suggested Reading 427

24 Strain Relaxation in Thin Films 428
24.1. Dislocation Array Beneath the Free Surface 428
24.2. Energy of a Dislocation Array 430
24.3. Strained-Layer Epitaxy 431
24.4. Conditions for Dislocation Array Formation 432
24.5. Frank and van der Merwe Energy Criterion 434
24.6. Gradual Strain Relaxation 436
24.7. Stability of Array Configurations 439
24.8. Stronger Stability Criteria 439
24.9. Further Stability Bounds 441
24.9.1. Lower Bound 441
24.9.2. Upper Bound 443
24.10. Suggested Reading 446

25 Stability of Planar Interfaces 447
25.1. Stressed Surface Problem 447
25.2. Chemical Potential 449
25.3. Surface Diffusion and Interface Stability
25.4. Volume Diffusion and Interface Stability
25.5. 2D Surface Profiles and Surface Stability
25.6. Asymptotic Stresses for 1D Surface Profiles
25.7. Suggested Reading

PART 6: PLASTICITY AND VISCOPLASTICITY

26 Phenomenological Plasticity
26.1. Yield Criteria for Multiaxial Stress States
26.2. Von Mises Yield Criterion
26.3. Tresca Yield Criterion
26.4. Mohr–Coulomb Yield Criterion
   26.4.1. Drucker–Prager Yield Criterion
26.5. Gurson Yield Criterion for Porous Metals
26.6. Anisotropic Yield Criteria
26.7. Elastic-Plastic Constitutive Equations
26.8. Isotropic Hardening
   26.8.1. J\textsubscript{2} Flow Theory of Plasticity
26.9. Kinematic Hardening
   26.9.1. Linear and Nonlinear Kinematic Hardening
26.10. Constitutive Equations for Pressure-Dependent Plasticity
26.11. Nonassociative Plasticity
26.13. Rate-Dependent Plasticity
   26.14.1. Rate-Type Formulation of Deformation Theory
26.15. J\textsubscript{2} Corner Theory
26.16. Rate-Dependent Flow Theory
   26.16.1. Multiplicative Decomposition \( F = F^e \cdot F^p \)
26.17. Elastic and Plastic Constitutive Contributions
   26.17.1. Rate-Dependent J\textsubscript{2} Flow Theory
26.18. A Rate Tangent Integration
   26.19.1. Ideally Plastic Material
   26.19.2. Incompressible Linearly Hardening Material
26.20. Suggested Reading

27 Micromechanics of Crystallographic Slip
27.1. Early Observations
27.2. Dislocations
   27.2.1. Some Basic Properties of Dislocations in Crystals
   27.2.2. Strain Hardening, Dislocation Interactions, and
           Dislocation Multiplication
27.3. Other Strengthening Mechanisms
27.4. Measurements of Latent Hardening
27.5. Observations of Slip in Single Crystals and Polycrystals at
      Modest Strains

## Contents

27.6. Deformation Mechanisms in Nanocrystalline Grains  
27.6.1. Background: AKK Model  
27.6.2. Perspective on Discreteness  
27.6.3. Dislocation and Partial Dislocation Slip Systems  
27.7. Suggested Reading  

28 Crystal Plasticity  
28.1. Basic Kinematics  
28.2. Stress and Stress Rates  
28.2.1. Resolved Shear Stress  
28.2.2. Rate-Independent Strain Hardening  
28.3. Convected Elasticity  
28.4. Rate-Dependent Slip  
28.4.1. A Rate Tangent Modulus  
28.5. Crystalline Component Forms  
28.5.1. Additional Crystalline Forms  
28.5.2. Component Forms on Laboratory Axes  
28.6. Suggested Reading  

29 The Nature of Crystalline Deformation: Localized Plastic Deformation  
29.1. Perspectives on Nonuniform and Localized Plastic Flow  
29.1.1. Coarse Slip Bands and Macroscopic Shear Bands in Simple Crystals  
29.1.2. Coarse Slip Bands and Macroscopic Shear Bands in Ordered Crystals  
29.2. Localized Deformation in Single Slip  
29.2.1. Constitutive Law for the Single Slip Crystal  
29.2.2. Plastic Shearing with Non-Schmid Effects  
29.2.3. Conditions for Localization  
29.2.4. Expansion to the Order of $\sigma$  
29.2.5. Perturbations about the Slip and Kink Plane Orientations  
29.2.6. Isotropic Elastic Moduli  
29.2.7. Particular Cases for Localization  
29.3. Localization in Multiple Slip  
29.3.1. Double Slip Model  
29.3.2. Constitutive Law for the Double Slip Crystal  
29.4. Numerical Results for Crystalline Deformation  
29.4.1. Additional Experimental Observations  
29.4.2. Numerical Observations  
29.5. Suggested Reading  

30 Polycrystal Plasticity  
30.1. Perspectives on Polycrystalline Modeling and Texture Development  
30.2. Polycrystal Model  
30.3. Extended Taylor Model

30.4. Model Calculational Procedure
   30.4.1. Texture Determinations
   30.4.2. Yield Surface Determination
30.5. Deformation Theories and Path-Dependent Response
   30.5.1. Specific Model Forms
   30.5.2. Alternative Approach to a Deformation Theory
   30.5.3. Nonproportional Loading
30.6. Suggested Reading

31 Laminate Plasticity
   31.1. Laminate Model
   31.2. Additional Kinematical Perspective
   31.3. Final Constitutive Forms
      31.3.1. Rigid-Plastic Laminate in Single Slip
   31.4. Suggested Reading

PART 7: BIOMECHANICS
32 Mechanics of a Growing Mass
   32.1. Introduction
   32.2. Continuity Equation
      32.2.1. Material Form of Continuity Equation
      32.2.2. Quantities per Unit Initial and Current Mass
   32.3. Reynolds Transport Theorem
   32.4. Momentum Principles
      32.4.1. Rate-Type Equations of Motion
   32.5. Energy Equation
      32.5.1. Material Form of Energy Equation
   32.6. Entropy Equation
      32.6.1. Material Form of Entropy Equation
      32.6.2. Combined Energy and Entropy Equations
   32.7. General Constitutive Framework
      32.7.1. Thermodynamic Potentials per Unit Initial Mass
      32.7.2. Equivalence of the Constitutive Structures
   32.8. Multiplicative Decomposition of Deformation Gradient
      32.8.1. Strain and Strain-Rate Measures
   32.9. Density Expressions
   32.10. Elastic Stress Response
   32.11. Partition of the Rate of Deformation
   32.12. Elastic Moduli Tensor
      32.12.1. Elastic Moduli Coefficients
   32.13. Elastic Strain Energy Representation
   32.14. Evolution Equation for Stretch Ratio
   32.15. Suggested Reading

33 Constitutive Relations for Membranes
   33.1. Biological Membranes
   33.2. Membrane Kinematics
33.3. Constitutive Laws for Membranes  
33.4. Limited Area Compressibility  
33.5. Simple Triangular Networks  
33.6. Suggested Reading  

PART 8: SOLVED PROBLEMS  
34 Solved Problems for Chapters 1–33
