

# Contents

Preface .....	xi
<i>Chapter 0</i> Preliminaries .....	xv
0.1 Number systems .....	xv
0.2 Number notations .....	xvi
0.3 Variables .....	xvi
0.4 Modulo arithmetic .....	xix
0.5 Some properties of the number zero .....	xxi
0.6 Miscellaneous definitions and conventions .....	xxii
<i>Chapter 1</i> Set Theory .....	1
A. Basic concepts of set theory .....	1
1. Set membership .....	1
2. How sets are specified .....	1
3. Subsets, proper subsets .....	3
4. Universe, null set, singleton sets .....	4
B. Operations and relations on sets .....	6
1. Equality of sets, disjoint sets .....	6
2. Union and intersection .....	6
3. Complement .....	7
4. Power set .....	7
5. Correspondences between sets .....	7
C. Operations and relations on members of a set .....	9
1. Operations on a set .....	9
2. Properties of Binary Operations .....	9
3. Relations on a set .....	9
4. Properties of binary relations .....	10
5. Equivalence relations .....	11
6. Isomorphism between sets .....	11
D. Mathematical notions built from set theory concepts .....	15
1. Number .....	15
2. Ordered pairs and relations .....	15
3. Functions .....	19
4. Sequences .....	21
5. Sequences vs. strings .....	22
E. Construction of the Real Number System .....	24
1. Introduction .....	24
2. The natural numbers .....	24
3. Extension to the set of all integers .....	25
4. Extension to the set of all rational numbers .....	27
5. Extension to the set of all real numbers .....	28

F.	Finite and infinite sets . . . . .	30
	1. Ordinary finite and infinite . . . . .	30
	2. Dedekind finite and infinite . . . . .	30
	3. The cardinal number $\aleph_0$ . . . . .	30
	4. Non-denumerable sets . . . . .	32
	5. The cardinal number of the continuum . . . . .	37
	6. Infinite vs. unbounded . . . . .	38
	Review Problems for Chapter I . . . . .	41
<i>Chapter II</i> Logic and Formal Systems . . . . .		45
A.	Formal systems . . . . .	45
	1. The notions "formal system" and "model" . . . . .	45
	2. Consistency, completeness, and independence . . . . .	47
	3. Syntax and semantics . . . . .	48
B.	Propositional logic . . . . .	49
	1. Propositional connectives and truth-tables . . . . .	50
	2. Propositional inference . . . . .	56
	3. An axiomatization of propositional logic . . . . .	69
	4. Alternative formalizations and notations . . . . .	77
C.	The Predicate Calculus . . . . .	81
	1. Symbolizing sentences with quantifiers . . . . .	81
	2. Some laws of quantifiers . . . . .	86
D.	Further examples of formal systems . . . . .	91
	1. An elementary formal system given by Wang . . . . .	91
	2. Peano's axioms for the natural numbers . . . . .	93
	3. Axioms for various types of ordering relations . . . . .	95
	4. Chomsky's formalization of string-rewriting systems . . . . .	97
	Review Problems for Chapter II . . . . .	101
<i>Chapter III</i> Modern Algebra . . . . .		103
A.	Basic definitions . . . . .	103
	1. Algebra . . . . .	103
	2. Subalgebra . . . . .	104
	3. Isomorphism . . . . .	104
	4. Homomorphism . . . . .	104
	5. Automorphism . . . . .	104
B.	Groups . . . . .	105
	1. The group axioms . . . . .	105
	2. Some models . . . . .	105
	3. A few elementary theorems . . . . .	107
	4. Isomorphism for groups . . . . .	110
	5. Subgroups . . . . .	112
	6. Cyclic Groups; Generators of Groups . . . . .	113
	7. Semigroups and monoids . . . . .	116

C.	Integral domains .....	118
1.	Definition of integral domain .....	118
2.	The integers .....	120
3.	Finite integral domains; congruences .....	120
4.	Isomorphism: examples .....	120
5.	Ordered integral domains .....	121
6.	Finite Induction .....	124
D.	Boolean algebras .....	127
1.	Axioms for Boolean algebra .....	127
2.	Some theorems of Boolean algebra .....	127
3.	Set theoretic models .....	129
4.	Venn diagrams .....	129
5.	Propositional logic as a model of Boolean algebra .....	133
	Review Problems for Chapter III .....	137
<i>Chapter IV Automata Theory and Computability</i> .....		139
A.	Introduction .....	139
B.	Finite state machines .....	141
1.	State diagrams and transition rules .....	141
2.	Non-deterministic FS machines .....	145
3.	Boolean properties of FS languages .....	147
4.	Regular languages .....	149
C.	Push-down storage automata .....	156
1.	Introduction .....	156
2.	Non-deterministic PDS automata .....	159
3.	Characterization of PDS languages .....	161
D.	Turing machines and computability .....	162
1.	Turing machines .....	162
2.	Algorithms; recursive functions and recursive sets .....	166
3.	Recursive definitions .....	170
4.	Universal Turing Machines .....	171
5.	Recursive unsolvability of the halting problem .....	172
	Review Problems for Chapter IV .....	174
Supplementary Reading .....		177
References .....		183
Answers to problems .....		187
Subject index .....		239
