Contents

Preface *xiii*

1 Elements of Set Theory *1*

Specification of Sets, 2
Equality of Sets: The Axiom of Extension, 4
Sets of Sets, 6
Subsets, 6
Members vs. Subsets, 7
Power Sets, 8
Exercises, 7
References and Supplementary Reading, 10

2 Symbolic Logic: The Propositional Calculus *12*

Propositions, 13
The Logical Connectives, 15
1. Conjunction, 15
2. Disjunction, 16
3. Negation, 17
4. The Conditional, 18
5. The Biconditional, 21
More Complex Propositions, 22
Tautologies and Contradictions, 25
Logical Equivalence, 27
Arguments, 34

Validity and Truth, 37
Rules of Inference, 38
Conditional Proof, 41
Indirect Proof, 44
Exercises, 45

3 The Predicate Calculus *51*

Terms, Predicates, Propositional Functions, 52
Quantifiers, 53
Bound and Free Variables, 56
The Domain of Discourse, 57
Set Specification and Predicates, 58
Representation of Universal and Existential Statements, 59
Tautology, Contradiction, and Logical Equivalence, 62
Arguments Involving Quantifiers, 65
1. Universal Instantiation, 65
2. Universal Generalization, 66
3. Existential Generalization, 68
4. Existential Instantiation, 68
Conditional Proof in the Predicate Calculus, 71
Arguments Containing Propositions with Two or More Quantifiers, 73
Exercises, 76
References and Supplementary Reading, 80

4 Further Aspects of Set Theory *81*

Some Set-Theoretic Predicates, 81
Some Theorems about Sets, 83
Informal Style in Mathematical Proofs, 84
Set Operations, 87
1. Union, 87
2. Intersection, 89
3. Relative Complementation, 91
4. Absolute Complementation, 92
Venn Diagrams, 92
Set-Theoretic Equalities, 98
Exercises, 102

5 Ordered Pairs, Cartesian Products, Relations, and Functions *104*

Ordered Pairs, 104
Cartesian Products, 106
Relations, 107

Domain and Range of a Relation, 108
Universal, Null, and Identity Relations, 109
Complementary and Inverse Relations, 109
Properties of Relations, 110
1. Reflexivity, 110
2. Symmetry, 111
3. Transitivity, 113
4. Connexity, 114
Diagrams of Relations, 115
Properties of Complementary and Inverse Relations, 117
Equivalence Relations and Partitions, 121
Functions, 124
Inverse Functions, 127
Composites, 129
Identity Functions, 130
Inverses of Composites, 131
Exercises, 133

6 Orders, Operations, Configurations, and Isomorphisms *137*

Orders, 137
Terminology, 140
Trees, 144
1. Dominance, 145
2. Precedence, 147
3. Labeling, 148
Operations, 152
Properties of Operations, 153
1. Well-definition, 153
2. Closure, 154
3. Associativity, 154
4. Commutativity, 154
5. Idempotence, 154
6. Distributivity, 155
7. Identity Elements, 155
8. Inverse Elements, 156
9. Zero Elements, 157
Mathematical Configurations Involving Operations, 157
1. Groups, 158
2. Subgroups, 160
3. Monoids, 162
4. Submonoids, 163
5. Semigroups, 163
Strings, 164
Isomorphisms, 166
Exercises, 172

7 Infinite Sets *174*

Equivalent Sets and Cardinality, 174
Denumerability of Sets, 177
Nondenumerable Sets, 181
Exercises, 186
References and Supplementary Reading, 186

8 Recursion *188*

Recursive Definition, 188
Induction, 193
Axiomatic Systems, 197
Extended Axiomatic Systems, 199
Semi-Thue Systems, 202
Exercises, 204
References and Supplementary Reading, 206

9 Grammars of Formal Languages *207*

Formal Grammars, 207
Types of Grammars, 211
Types of Languages, 213
Grammars and Constituent-Structure Trees, 214
Right-Linear Grammars and Languages, 221
1. *An Equivalent Formulation of Right-Linear Grammars*, 223
2. *Type 3 Languages and Regular Sets*, 225
3. *Inadequacy of Right-Linear Grammars for Natural Languages*, 231

Context-Sensitive Grammars and Languages, 234
1. *Existence of a Decision Procedure for Membership in a Type 1 Language*, 234
2. *Type 1 Languages and Recursive Sets*, 236
3. *Some Undecidable Questions Concerning Type 1 Grammars and Languages*, 238

Context-Free Grammars and Languages, 238
1. *Decidability of the Emptiness Question for Context-Free Grammars*, 239
2. *Reductions of Context-Free Grammars*, 241
3. *A Characterization Theorem for Context-Free Languages*, 247
4. *Closure Properties of Context-Free Languages*, 249

Exercises, 251
References and Supplementary Reading, 252

10 Automata *254*

Finite Automata, 254
1. *State Diagrams of Finite Automata*, 257
2. *Deterministic vs. Nondeterministic Finite Automata*, 258

3. Formal Definition of Deterministic Finite Automata, 259
4. Finite Automata and Type 3 Grammars, 261
5. Finite Automata as Generators, 264
6. Finite Automata and Regular Sets, 265
7. Finite Automata and Equivalence Relations, 267
Turing Machines, 274
1. Formal Definition of Turing Machines, 276
2. Equivalent Formulations of Turing Machines, 278
3. Recursive vs. Recursively Enumerable Sets, 279
4. Equivalence of Turing Machines and Type 0 Grammars, 280
Pushdown Automata, 282
Linear-Bounded Automata, 285
Exercises, 287
References and Supplementary Reading, 288

11 Mathematical Characterization of Transformational Grammars ***289***

References and Supplementary Reading, 296

Bibliography ***298***

Answers to Selected Exercises ***304***

Index of Symbols ***321***

General Index ***323***
