Preface . . . . . vii
Contents . . . . . ix
List of Symbols . . . . . xiii

Chapter 0
DEVELOPMENTAL SYSTEMS AND LANGUAGES IN THEIR BIOLOGICAL CONTEXT, Aristid Lindenmayer . . . . . 1
0.1. Cellular automata arrays and developmental systems . . . . . 3
0.2. Growth descriptions and growth functions . . . . . 7
0.3. Root growth as example of elemental growth descriptions . . . . . 9
0.4. Cell lineages and morphogenesis . . . . . 16
0.5. Locally catenative rules for algal growth . . . . . 23
0.6. Development of compound structures: compound leaves . . . . . 26
0.7. Development under cyclic changes of environment: zones of perithecia . . 28
0.8. Development under a single major environmental change: flower initiation . 31
0.9. Polarity in development . . . . . 36
0.10. Concluding remarks . . . . . 38

## PART I. LANGUAGES

Chapter 1
DEVELOPMENTAL SYSTEMS AND LANGUAGES IN THEIR FORMAL CONTEXT . . . . . 43
1.1. A biological example . . . . . 43
1.2. Developmental systems and languages . . . . . 52
1.3. The Chomsky hierarchy . . . . . 55
Exercises . . . . . 62

Chapter 2
THE BASIC FAMILY: 0L LANGUAGES. . . . . 63
2.1. Formal definitions . . . . . 63
2.2. Examples and elementary properties . . . . . 65
2.3. Decision problems . . . . . 68
2.4. Derivations and derivation graphs in 0L schemes . . . . . 70
2.5. The linear derivation property and a solution to the membership problem . 74
2.6. The equivalence problem for 0L systems . . . . . 76
2.7. Deterministic and propagating restrictions on 0L systems . . . . . 78
Exercises . . . . . 80

Chapter 3
RESTRICTION TO ONE LETTER ALPHABET: U0L LANGUAGES . . . . 81
3.1. Formal definitions . . . . . 81

3.2. Characterization results . . . . . 83
3.3. Regular expressions . . . . . 89
3.4. Regular expressions and U0L languages . . . . . 90
3.5. Two closure results for U0L languages . . . . . 92
3.6. The deterministic and propagating restrictions on U0L systems . . . . . 96
Exercises . . . . . 96

Chapter 4
EXTENSION USING AUXILIARY SYMBOLS: E0L LANGUAGES . . . 98
4.1. The extension operation . . . . . 99
4.2. Synchronization and closure results . . . . . 101
4.3. E0L languages as generalizations of CF languages . . . . . 103
4.4. Deterministic and propagating restrictions on E0L systems . . . . . 110
Exercises . . . . . 110

Chapter 5
CONTROL USING TABLES: T0L LANGUAGES . . . . . 112
5.1. Formal definitions, examples and elementary properties . . . . . 112
5.2. Derivations and derivation graphs in T0L schemes . . . . . 115
5.3. Some complexity results for T0L systems and languages . . . . . 117
5.4. The role of erasing in T0L systems . . . . . 120
5.5. Determinism in T0L systems . . . . . 126
Exercises . . . . . 130

Chapter 6
SYSTEMS WITH INTERACTIONS: IL LANGUAGES . . . . . 132
6.1. Formal definitions and examples . . . . . 132
6.2. A normal form theorem for IL systems . . . . . 135
6.3. A basic inclusion result for IL languages . . . . . 137
6.4. Two sided IL systems . . . . . 139
6.5. One sided IL systems . . . . . 140
6.6. The role of erasing . . . . . 143
Exercises . . . . . 145

Chapter 7
SOME OTHER GENERALIZATIONS . . . . . 147
7.1. Finite axiom systems . . . . . 147
7.2. Extensions of IL languages . . . . . 151
7.3. Extensions of T0L languages . . . . . 154
Exercises . . . . . 162

Chapter 8
RECURRENCE SYSTEMS . . . . . 164
8.1. Motivation and definitions . . . . . 164
8.2. Normal form theorems for recurrence systems . . . . . 172
8.3. Recurrence systems and developmental languages . . . . . 178
Exercises . . . . . 186

Chapter 9
CLOSURE PROPERTIES . . . . . 188
9.1. Motivation and definitions . . . . . 188
9.2. Lack of closure properties for the family of 0L languages . . . . . 190
9.3. Closure properties of the family of ET0L languages . . . . . 192
Exercises . . . . . 195

Chapter 10
COMPARISON OF GENERATIVE POWER . . . . . 197
10.1. Turing machines . . . . . 197
10.2. Inclusion results . . . . . 202
Exercises . . . . . 209

## PART II. SEQUENCES

Chapter 11
D0L SEQUENCES . . . . . 213
11.1. Definitions, notation and examples . . . . . 213
11.2. The role of erasing . . . . . 215
11.3. Periodicities in D0L sequences . . . . . 217
11.4. Circularities in D0L sequences . . . . . 221
Exercises . . . . . 222

Chapter 12
LOCALLY CATENATIVE SEQUENCES . . . . . 224
12.1. Definitions and examples . . . . . 224
12.2. Realizations of locally catenative formulas . . . . . 225
12.3. PD0L systems with covering . . . . . 227
12.4. Dependent PD0L systems . . . . . 228
12.5. Covering versus dependence . . . . . 230
12.6. Dependence versus local catenativeness . . . . . 232
12.7. Equivalence of locally catenative formulas . . . . . 233
Exercises . . . . . 236

Chapter 13
THE ROLE OF ENVIRONMENT . . . . . 238
13.1. Interactive systems with changing environment . . . . . 238
13.2. Autonomy: independence from the environment . . . . . 246
Exercises . . . . . 250

Chapter 14
SYNTACTIC INFERENCE . . . . . 251
14.1. The syntactic inference problem . . . . . 251
14.2. Solutions to the syntactic inference problems . . . . . 257
14.3. Relevance of grammatical inference notions to biological problems . . . 262
Exercises . . . . . 268

Chapter 15
GROWTH FUNCTIONS . . . . . 269
15.1. Definitions and problem statements . . . . . 269

15.2. Analysis of growth functions of D0IL systems . . . . . 272
15.3. Synthesis of growth functions and D0IL systems . . . . . 276
15.4. The growth equivalence and classification problems for D0IL systems . . . 278
15.5. Hierarchy problems . . . . . 279
Exercises . . . . . 281

PART III. BIOLOGICALLY ORIENTED TOPICS

Chapter 16
SYNCHRONIZATION OF GROWING FILAMENTS . . . . . 287
16.1. The generalized firing squad synchronization problem . . . . . 288
16.2. Synchronization with growth at the ends: preparatory stage . . . . . 291
16.3. Synchronization with growth at the ends: standard stage . . . . . 296
16.4. Implementation . . . . . 300
Exercises . . . . . 304

Chapter 17
POLARITY . . . . . 305
17.1. Motivation and definitions . . . . . 305
17.2. The problem of universal computing ability . . . . . 308
17.3. The French flag problem . . . . . 312
Exercises . . . . . 324

Chapter 18
SIMULATION OF DEVELOPMENTAL PROCESSES . . . . . 325
18.1. Pigmentation patterns on snail shells . . . . . 325
18.2. The problem of heterocyst formation in filamentous blue-green algae . . . 328
18.3. The appropriateness of approximating the continuous situation by a discrete model . . . . . 340
Exercise . . . . . 341

Bibliographical Comments . . . . . 342
Bibliography . . . . . 349
Author Index . . . . . 359
Subject Index . . . . . 361
