Preface	ix
1. Introduction	1
1.1. Modern VLSI	5
1.2. The Driving Forces for Continued Integration Growth	8
1.3. Moore's Law	9
1.4. Types of Materials	11
References	15
2. The Crystalline Nature of Materials	17
2.1. The Various States of Matter	18
2.1.1. Van der Waals Bonding	20
2.1.2. Ionic Bonding	22
2.1.3. Covalent Bonding	22
2.1.4. Metallic Bond	23
2.2. Space Lattices	23
2.3. Crystalline Directions	31
2.4. X-Ray Diffraction	38
References	45
Problems	45
3. The Wave Mechanics of Electrons	47
3.1. The Photoelectric Effect	51
3.2. Electrons as Waves	53
3.3. The Schrödinger Equation	60

3.4. Some Simple Potentials	70
3.5. Tunneling Through Barriers	81
3.6. Quantum Wells	89
3.7. The Particle in a Box	96
3.8. Atomic Energy Levels	98
References	104
Problems	104
4. Semiconductors	109
4.1. Periodic Potentials	111
4.2. Bloch's Theorem and Brillouin Zones	115
4.3. The Kronig–Penney Model	118
4.4. Nearest-Neighbor Coupling—The Tight-Binding Approach	125
4.5. Three Dimensions and the Band Structure for Si and GaAs	129
4.6. Effective Mass of the Electron	134
4.7. Alloys and Heterostructures	142
4.8. The Atoms in Motion	148
4.9. Types of Materials	156
References	158
Problems	158
5. Electrical Transport	161
5.1. Fermi–Dirac Statistics	162
5.2. Intrinsic Semiconductors	168
5.3. Extrinsic Semiconductors	175
5.4. Electrical Conductivity	182
5.5. Conductivity in a Magnetic Field	188
5.5.1. Low Magnetic Field	189
5.5.2. High Magnetic Field	192
5.5.3. The Quantum Hall Effect	195
5.6. Majority and Minority Carriers	200
5.7. Lifetimes, Recombination, and the Diffusion Equation	204
5.8. The Work Function	208
References	215
Problems	216
6. Semiconductor Devices	219
6.1. The p – n Junction	220
6.1.1. Electrostatics of the p – n Junction	225
6.1.2. Current Flow in p – n Junctions	232
6.1.3. Diodes under Large Reverse Bias	237
6.2. The Bipolar Transistor	241

6.2.1. Current Flow in the BJT	244
6.2.2. The Current Gain α	246
6.3. The Metal–Semiconductor Junction	249
6.4. The Schottky–Gate Transistor	254
6.5. The Metal–Oxide–Semiconductor Field-Effect Transistor (MOSFET)	260
6.5.1. The MOS Structure and the Surface Channel	262
6.5.2. The MOSFET Characteristics	266
6.6. The High-Electron-Mobility Transistor	271
6.7. Complementary MOS Structures	278
6.7.1. The Complementary Circuit	280
6.7.2. The DRAM Cell	283
References	284
Problems	284
7. Dielectric Material	289
7.1. Dielectric Effects	289
7.1.1. Lattice Polarization	294
7.1.2. Electronic Polarizability	296
7.2. Piezoelectric Effects	299
7.3. Ferroelectric Material	301
7.4. Pyroelectric Effects	304
7.5. Microelectromechanical Structures	305
References	309
Problems	310
8. Optoelectronics	311
8.1. Photodetection Devices	312
8.1.1. Photoconductivity	315
8.1.2. Transverse Photovoltage	317
8.1.3. Pyroelectric Detectors	319
8.1.4. Photodiodes	321
8.2. Spontaneous and Stimulated Emission	326
8.3. Lasers	331
8.4. Semiconductor Lasers	336
Problems	340
9. Magnetic Materials	343
9.1. Magnetic Susceptibility	345
9.2. Diamagnetism	348
9.3. Paramagnetism	351
9.4. Ferromagnetism	356

9.5. Giant Magnetoresistance	362
9.6. Magnetic Memory	363
Problems	366
10. Superconductivity	369
10.1. Properties of Superconductors	370
10.2. The Meissner Effect	374
10.3. The London Equations	377
10.4. The BCS Theory	380
10.5. Superconducting Tunneling	383
10.6. High- T_c Materials	389
Problems	391
Appendices	393
A. The Hydrogen Atom	393
A.1. Separation of the Angular Equation	395
A.2. The Radial Equation	400
B. Impurity Insertion	405
B.1. Impurity Diffusion	405
B.2. Ion Implantation	408
C. Semiconductor Properties	411
D. Some Fundamental Constants	413
Index	415
