Contents

Preface ix

Tables and Figures xxi

The Author xxiii

1. Issues in Planning Evaluations 1

What Evaluations Are of Most Worth? 4
Conflicting Ideals for Evaluation 22
The Emerging Reconciliation 26
Basic Questions 31
Toward a Sophisticated Differentiation 44

2. Three Illustrative Studies 46

INCAP Nutrition Study 48

Physics Study 59
Violence Study 67

3. Elements in an Evaluation Design **76**
Concepts Describing a Study 77
UTOS, *The Domain of Admissible Observations* 88
*UTOS, *The Domain of Application* 99
Comparative Studies 103
Internal and External Inference 106

4. The Limited Reach of Internal Validity **112**
Key Terms 113
Causal Inference: How Important? 132
The True History of the Bail Bond Experiment 144
Alternative Views on Interactions 149
Trading Off Strength of Design for Relevance 155

5. Models for Internal and External Inference **158**
Reasoning by Means of a Model 158
Inference to UTOS 162
Inference to *UTOS 166
External Validity as Credibility 176

6. Mathematical Extrapolations: Procedures and Uncertainties **182**
Notes on Regression Equations 185
Role of Pretests 188
Bias Arising from an Incomplete Covariate 191
Extension to Comparative Studies 199
Reconstruction of Truncated Distributions 205

7. Choosing Questions to Investigate **209**
Divergent Phase 210
Convergent Phase 225
Convergence on a Mix of Questions 239

8. Controls that Promote Reproducibility **245**
Specification of UTO 249
Rules for Sampling and Assignment 255
Operationalizing the Treatment 262
Plans for Observing 266
Operations for Data Reduction 272
Narrowing the Target 275
From Internal to External Inference 281

9. Planning to Provide Relevant Answers **289**
Shortening the Extrapolation 292
Explanatory Support for Inferences 298
Planning for Communication 311

10. Evaluation: The Art of the Possible **321**
Aspects of Experimentation 323
Gaining Credibility 332
Learning About Design 335
