

Contents

1	Introduction	1
1	Weyl Calculus and Arithmetic	
2	A non-arithmetic prologue	7
3	A family of arithmetic coherent states for the metaplectic representation	13
4	Wigner functions of pairs of arithmetic coherent states	24
5	Matrix elements of operators from the Weyl calculus against arithmetic coherent states	35
2	Quantization	
6	Discrete series of $SL(2, \mathbb{R})$ and the hyperbolic half-plane as a phase space	51
7	Reinstalling \mathbb{R}^2 as a phase space: the horocyclic calculus	58
3	Quantization and Modular Forms	
8	An extension of the Rankin-Selberg unfolding method	72
9	Discrete series and arithmetic coherent states	81
10	Radial horocyclic calculus and arithmetic	91
11	Beyond the radial case: automorphic distributions	102
4	Back to the Weyl Calculus	
12	Letting N go to infinity	117
13	Spaces of combs and Dirichlet series	130
	Index	143
	Bibliography	145
