| | Α | A Brief Historical Perspective of Transport Phenomena in | |
| | | Chemical Engineering | 1 |
| | В | The Nature of the Subject | 2 |
| | С | A Brief Description of the Contents of This Book | 4 |
| | | otes and References | 11 |
| 2 | Ва | sic Principles | 13 |
| | Α | The Continuum Approximation | 13 |
| | | I Foundations | 14 |
| | | 2 Consequences | 15 |
| | В | Conservation of Mass – The Continuity Equation | 18 |
| | С | Newton's Laws of Mechanics | 25 |
| | D | Conservation of Energy and the Entropy Inequality | 31 |
| | Ε | Constitutive Equations | 36 |
| | F | Fluid Statics – The Stress Tensor for a Stationary Fluid | 37 |
| | G | The Constitutive Equation for the Heat Flux Vector – Fourier's | |
| | | Law | 42 |
| | Η | Constitutive Equations for a Flowing Fluid – The Newtonian Fluid | 45 |
| | 1 | The Equations of Motion for a Newtonian Fluid – The | |
| | | Navier–Stokes Equation | 49 |
| | J | Complex Fluids – Origins of Non-Newtonian Behavior | 52 |
| | K | • | 59 |
| | L | Boundary Conditions at Solid Walls and Fluid Interfaces | 65 |
| | | I The Kinematic Condition | 67 |
| | | 2 Thermal Boundary Conditions | 68 |
| | | 3 The Dynamic Boundary Condition | 69 |
| | M | Further Considerations of the Boundary Conditions at the | |
| | | Interface Between Two Pure Fluids – The Stress Conditions | 74 |
| | | I Generalization of the Kinematic Boundary Condition for an | |
| | | Interface | 75 |
| | | 2 The Stress Conditions 3 The Newsel Stress Polence and Confilence Flouring | 76 79 |
| | | The Normal-Stress Balance and Capillary Flows | 79 84 |
| | | 4 The Tangential-Stress Balance and Thermocapillary Flows | 04 |

| | Ν | The Role of Surfactants in the Boundary Conditions at | |
|---|-------|--|-----|
| | | a Fluid Interface | 89 |
| | Not | tes and Reference | 96 |
| | | blems | 99 |
| | | | |
| 3 | | idirectional and One-Dimensional Flow and Heat Transfer | 110 |
| | · . | Simplification of the Navier–Stokes Equations for Unidirectional | |
| | Α | Flows | 113 |
| | В | Steady Unidirectional Flows – Nondimensionalization and | |
| | | Characteristic Scales | 115 |
| | С | Circular Couette Flow – A One-Dimensional Analog to | |
| | _ | Unidirectional Flows | 125 |
| | D | Start-Up Flow in a Circular Tube – Solution by Separation | |
| | | of Variables | 135 |
| | Ε | The Rayleigh Problem – Solution by Similarity Transformation | 142 |
| | F | Start-Up of Simple Shear Flow | 148 |
| | G | Solidification at a Planar Interface | 152 |
| | Н | Heat Transfer in Unidirectional Flows | 157 |
| | • • • | I Steady-State Heat Transfer in Fully Developed Flow through a | |
| | | Heated (or Cooled) Section of a Circular Tube | 158 |
| | | 2 Taylor Diffusion in a Circular Tube | 166 |
| | ı | Pulsatile Flow in a Circular Tube | 175 |
| | No | otes | 183 |
| | Pro | oblems . | 185 |
| 4 | ۸, | n Introduction to Asymptotic Approximations | 204 |
| 7 | A | Pulsatile Flow in a Circular Tube Revisited – Asymptotic Solutions | |
| | ^ | for High and Low Frequencies | 205 |
| | | I Asymptotic Solution for $R_{\omega} \ll 1$ | 206 |
| | | 2 Asymptotic Solution for $R_{\omega} \gg 1$ | 209 |
| | В | Asymptotic Expansions – General Considerations | 216 |
| | c | The Effect of Viscous Dissipation on a Simple Shear Flow | 219 |
| | D | The Motion of a Fluid Through a Slightly Curved Tube – The Dean | |
| | _ | Problem | 224 |
| | Ε | Flow in a Wavy-Wall Channel – "Domain Perturbation Method" | 232 |
| | - | I Flow Parallel to the Corrugation Grooves | 233 |
| | | 2 Flow Perpendicular to the Corrugation Grooves | 237 |
| | F | Diffusion in a Sphere with Fast Reaction – "Singular Perturbation | |
| | | Theory" | 242 |
| | G | Bubble Dynamics in a Quiescent Fluid | 250 |
| | | I The Rayleigh-Plesset Equation | 251 |
| | | 2 Equilibrium Solutions and Their Stability | 255 |
| | | 3 Bubble Oscillations Due to Periodic Pressure Oscillations - | |
| | | Resonance and "Multiple-Time-Scale Analysis" | 260 |
| | | 4 Stability to Nonspherical Disturbances | 269 |
| | | otes | 282 |
| | Pr | oblems | 284 |
| 5 | Т | he Thin-Gap Approximation – Lubrication Problems | 294 |
| _ | A | | 295 |
| | | The Narrow-Gap Limit — Governing Equations and Solutions | 297 |
| | | | |

| | D | 2 Lubrication Forces | 303 |
|---|-----|--|-------------|
| | В | Derivation of the Basic Equations of Lubrication Theory | 306 |
| | С | Applications of Lubrication Theory | 315 |
| | | The Slider-Block Problem | 315 |
| | | 2 The Motion of a Sphere Toward a Solid, Plane | |
| | _ | Boundary | 320 |
| | D | The Air Hockey Table | 325 |
| | | I The Lubrication Limit, \tilde{R} e \ll I | 328 |
| | | 2 The Uniform Blowing Limit, $p_R^* \gg 1$ | 332 |
| | | a Ře≪ l | 334 336 |
| | | b Re≫ I | 345 |
| | No | c Lift on the Disk | |
| | | | 346 |
| | Pro | blems | 347 |
| 6 | Th | e Thin-Gap Approximation – Films with a Free Surface | 355 |
| | Α | Derivation of the Governing Equations | 355 |
| | | I The Basic Equations and Boundary Conditions | 355 |
| | | 2 Simplification of the Interface Boundary Conditions for | |
| | | a Thin Film | 359 |
| | | 3 Derivation of the Dynamical Equation for the Shape Function, | |
| | | $h(\mathbf{x}_s,t)$ | 360 |
| | В | Self-Similar Solutions of Nonlinear Diffusion Equations | 362 |
| | С | Films with a Free Surface – Spreading Films on a Horizontal | |
| | | Surface | 367 |
| | | I Gravitational Spreading | 367 |
| | | 2 Capillary Spreading | 371 |
| | D | The Dynamics of a Thin Film in the Presence of van der Waals | |
| | | Forces | 376 |
| | | 1 Linear Stability | 378 |
| | | 2 Similarity Solutions for Film Rupture | 381 |
| | E | Shallow-Cavity Flows | 385 |
| | | I The Horizontal, Enclosed Shallow Cavity | 386 |
| | | 2 The Horizontal Shallow Cavity with a Free Surface | 391 |
| | | a Solution by means of the classical thin-film analysis | 392 |
| | | b Solution by means of the method of domain perturbations | 396 |
| | | c The end regions | 401 |
| | | 3 Thermocapillary Flow in a Thin Cavity | 404 |
| | | a Thin-film solution procedure | 410 |
| | | b Solution by domain perturbation for $\delta=1$ | 413 |
| | No | | 418 |
| | Pro | blems | 418 |
| 7 | Cr | eeping Flow – Two-Dimensional and Axisymmetric Problems | 429 |
| • | A | Nondimensionalization and the Creeping-Flow Equations | 430 |
| | В | Some General Consequences of Linearity and the Creeping-Flow | 150 |
| | U | Equations | 434 |
| | | · · | 73 7 |
| | | The Drag on Bodies That Are Mirror Images in the Direction of Motion | 434 |
| | | 2 The Lift on a Sphere That is Rotating in a Simple Shear Flow | 436 |
| | | 3 Lateral Migration of a Sphere in Poiseuille Flow | 438 |
| | | 4 Resistance Matrices for the Force and Torque on a Body in | ,50 |
| | | Creeping Flow | 439 |
| | | | |

| | C | Representation of Two-Dimensional and Axisymmetric Flows in | |
|---|--------|---|--|
| | | Terms of the Streamfunction | 444 |
| | D | Two-Dimensional Creeping Flows: Solutions by Means of | |
| | | Eigenfunction Expansions (Separation of Variables) | 449 |
| | | I General Eigenfunction Expansions in Cartesian and Cylindrical | |
| | | Coordinates | 449 |
| | | 2 Application to Two-Dimensional Flow near Corners | 451 |
| | E | Axisymmetric Creeping Flows: Solution by Means of Eigenfunction | |
| | | Expansions in Spherical Coordinates (Separation of Variables) | 458 |
| | | I General Eigenfunction Expansion | 459 |
| | | 2 Application to Uniform Streaming Flow past an Arbitrary | 444 |
| | | Axisymmetric Body | 464 |
| | F | Uniform Streaming Flow past a Solid Sphere – Stokes' Law | 466 |
| | G | A Rigid Sphere in Axisymmetric, Extensional Flow | 470 |
| | | I The Flow Field | 470 |
| | | 2 Dilute Suspension Rheology – The Einstein Viscosity | 473 |
| | | Formula | 473 |
| | Н | Translation of a Drop Through a Quiescent Fluid at Low Re | 477 |
| | 1 | Marangoni Effects on the Motion of Bubbles and Drops | 486 |
| | J | Surfactant Effects on the Buoyancy-Driven Motion | |
| | | of a Drop | 490 |
| | | I Governing Equations and Boundary Conditions for a | 400 |
| | | Translating Drop with Surfactant Adsorbed at the Interface | 493 |
| | | 2 The Spherical-Cap Limit | 497 503 |
| | N.I | 3 The Limit of Fast Adsorption Kinetics | 510 |
| | No | | |
| | Pro | blems | 512 |
| 8 | Cr | eeping Flow – Three-Dimensional Problems | 524 |
| | Α | Solutions by Means of Superposition of Vector Harmonic | |
| | | Functions | FOF |
| | | | 525 |
| | | l Preliminary Concepts | 525 525 |
| | | I Preliminary Concepts a Vector "equality" – pseudo-vectors | |
| | | | 525 525 |
| | | Vector "equality" – pseudo-vectors Representation theorem for solution of the creeping-flow equations | 525 525 526 |
| | | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions | 525 525 526 527 |
| | | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid | 525 525 526 527 528 |
| | | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere | 525 525 526 527 528 529 |
| | В | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow | 525 525 526 527 528 529 530 |
| | C | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow | 525 525 526 527 528 529 530 537 |
| | | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations | 525 525 526 527 528 529 530 |
| | C | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations I The "Stokeslet": A Fundamental Solution for the | 525 525 526 527 528 529 530 537 545 |
| | C | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations | 525 525 526 527 528 529 530 537 |
| | C | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow | 525 525 526 527 528 529 530 537 545 |
| | C D | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow Equations due to Ladyzhenskaya | 525 525 526 527 528 529 530 537 545 |
| | C | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow Equations due to Ladyzhenskaya Solutions for Solid Bodies by Means of Internal Distributions of | 525 525 526 527 528 529 530 537 545 545 |
| | C D | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow Equations due to Ladyzhenskaya Solutions for Solid Bodies by Means of Internal Distributions of Singularities | 525 525 526 527 528 529 530 537 545 |
| | C D | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow Equations due to Ladyzhenskaya Solutions for Solid Bodies by Means of Internal Distributions of Singularities I Fundamental Solutions for a Force Dipole and Other | 525 525 526 527 528 529 530 537 545 545 547 |
| | C D | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow Equations due to Ladyzhenskaya Solutions for Solid Bodies by Means of Internal Distributions of Singularities I Fundamental Solutions for a Force Dipole and Other Higher-Order Singularities | 525 525 526 527 528 529 530 537 545 545 547 550 |
| | C D | a Vector "equality" – pseudo-vectors b Representation theorem for solution of the creeping-flow equations c Vector harmonic functions 2 The Rotating Sphere in a Quiescent Fluid 3 Uniform Flow past a Sphere A Sphere in a General Linear Flow Deformation of a Drop in a General Linear Flow Fundamental Solutions of the Creeping-Flow Equations 1 The "Stokeslet": A Fundamental Solution for the Creeping-Flow Equations 2 An Integral Representation for Solutions of the Creeping-Flow Equations due to Ladyzhenskaya Solutions for Solid Bodies by Means of Internal Distributions of Singularities 1 Fundamental Solutions for a Force Dipole and Other Higher-Order Singularities 2 Translation of a Sphere in a Quiescent Fluid (Stokes' Solution) | 525 525 526 527 528 529 530 537 545 545 547 |
