PART I: AN INTRODUCTION TO THE SCIENTIFIC STUDY OF MUMMIES

1. The background of the Manchester mummy project 3
Rosalie David
2. Egyptian mummies: an overview 10
Rosalie David

PART II: DIET, DISEASE AND DEATH IN ANCIENT EGYPT: DIAGNOSTIC AND INVESTIGATIVE TECHNIQUES

3. Imaging in Egyptian mummies 21
Judith E. Adams and Chrissie W. Alsop
4. Endoscopy and mummy research 43
Ken Wildsmith
5. Dental health and disease in ancient Egypt 52
Judith Miller
6. Slices of mummy: a histologist's perspective 71
John Denton

7. Palaeopathology at the beginning of the new millennium: a review of the literature	83
<i>Maria Jeziorska</i>	
8. The use of immunocytochemistry to diagnose disease in mummies	99
<i>Patricia Rutherford</i>	
9. DNA identification in mummies and associated material	116
<i>Patricia Rutherford</i>	
10. An introduction to analytical methods	133
<i>Andrew P. Gize</i>	
11. The facial reconstruction of ancient Egyptians	162
<i>Caroline M. Wilkinson</i>	
PART III: THE TREATMENT OF DISEASE IN ANCIENT EGYPT	
12. The ancient Egyptian medical system	181
<i>Rosalie David</i>	
13. Intoxicants in ancient Egypt? opium, nymphaea, coca and tobacco	195
<i>David J. Counsell</i>	
14. Pharmacy in ancient Egypt	216
<i>Jacqueline M. Campbell</i>	
PART IV: RESOURCES FOR STUDYING MUMMIES	
15. The International Ancient Egyptian Mummy Tissue Bank	237
<i>Rosalie David</i>	
16. Conservation treatment for mummies	247
<i>Antony E. David</i>	
PART V: THE FUTURE OF BIOMEDICAL AND SCIENTIFIC STUDIES IN EGYPTOLOGY	
17. Biomedical Egyptology: some future possibilities and contributions	257
<i>Rosalie David</i>	
<i>References</i>	263
<i>Index</i>	297

List of Plates

Colour plates follow page 146

- I. Histological section of underside of a leaf.
- II. Bacteria in gram-stained histological section.
- III. Histological section of *Serpula lacrymans* fungus.
- IV. Histological section through the fibrous pleura of the lung.
- V. Histological section of the ear of mummified cat.
- VI. Histological section of wheat from a tomb.
- VII. Histological section of ancient decalcified bone.
- VIII. Histological section of bone providing timeline of events.
- IX. Histological section of Egyptian bandage.
- X. Positive staining of *S. mansoni* ova within infected mouse liver: lateral spike. $\times 100$.
- XI. Positive staining of *S. mansoni* ova within infected mouse liver. $\times 100$.
- XII. Positive staining of *S. haematobium* within infected hamster liver. $\times 100$.
- XIII. Positive staining of mummy bladder tissue. $\times 100$.
- XIV. Positive staining of mummy bladder tissue with ova. $\times 100$.
- XV. Ultraviolet fluorescence microscopy of hair from a mummy.
- XVI. Visible light and infrared images of hair from a mummy.
- XVII. Facial reconstructions of ancient Egyptians.
- XVIII. Mummy covered with efflorescence and mould growth.
- XIX. Hands and torso of the mummy after conservation treatment.

List of Figures

1. Mummy in gilded cartonnage.	<i>page</i> 23
2. AP radiograph of the thoracic region of a mummy.	27
3. CT scan through the head: layering of resin posteriorly in the skull.	29
4. Jumbled bones in a mummy.	31
5. Radiographs of mummy showing metal studs/amulets.	31
6. AP radiograph showing packages in the right thorax of a mummy.	32
7. Lateral radiograph and CT scan of a mummy showing packing in mouth.	32
8. Radiograph and CT scan of a mummy showing false eyes.	33
9. Radiographic evidence of brain removal in mummification.	33
10. Radiographic evidence indicating gender in a mummy.	35
11. Age determination in mummies: AP radiograph showing evidence of epiphyses.	37
12. Radiographic evidence of disease processes in mummies.	39
13. Radiographs of animal mummies.	41
14. Severe wear on tooth.	57
15. Caries in the cervical area of a tooth plus a large interproximal cavity.	59
16. Periapical destruction caused by the wear shown in Figure 1.	59
17. Dentition showing horizontal and vertical periodontal disease.	61
18. Example of teeth that could be removed by digital manipulation.	67
19. The only example of a possible dental extraction found in Miller's survey.	69
20. Maxilla showing two non-physiological defects.	69

21. Isomers of C ₄ H ₁₀ .	135
22. Diastereomers of cholestane.	135
23. The electromagnetic spectrum.	141
24. Depictions of cyclohexane.	147
25. The structure of glycine and alanine.	147
26. Total ion chromatograms of wax coating a pillow (a) and beeswax (b).	153
27. SEM image of natron crystals in the bladder of a mummy.	159
28. ESEM image of crystalline wax coating a pillow.	159
29. Facial reconstruction procedures.	165
30. The preserved remains of an ancient Egyptian priest, with facial reconstruction.	169
31. Production of a three-dimensional skull model from two-dimensional data.	169
32. Facial reconstruction of Ramesses II from the mummified soft tissues.	171
33. Comparison of facial reconstructions of ancient Egyptians with portraits.	172
34. Depictions of disease and trauma in facial reconstruction work.	174
35. Facial reconstructions of the skulls from Tomb KV5.	175
36. Comparison of the facial reconstructions from Tomb KV5 and Ramesses II.	177
37. Summary of classification of intoxicants.	197
38. Total ion chromatogram for juglet number 744.	201
39. Total ion chromatograms for four <i>Bil-Bil</i> juglets.	203
40. Summary of provenance and forensic laboratory analysis on Manchester Cypriot Base II Ring Ware collection.	199
41. Summary of botanical features of ancient Egyptian 'lotuses.'	205
42. Phytosterol profile of ancient and modern <i>Nymphaea caerulea</i> compared with petal of <i>Impatiens walleriana</i> .	207
43. Comparison of hair analysis for cocaine and nicotine in Egypt and South America.	211
