Part I: General Chapters: Sulfate Activation and Reduction, Biosynthesis of Sulfur Containing Amino Acids

1 Introduction to Sulfur Metabolism in Phototrophic Organisms	1–14
<i>Christiane Dahl, Rüdiger Hell, Thomas Leustek and David Knaff</i>	
Summary	2
I. Introduction	2
II. Historical Outline	3
III. Biologically Important Organic and Inorganic Sulfur Compounds	4
IV. The Natural Sulfur Cycle	8
References	11
2 Uptake, Distribution and Subcellular Transport of Sulfate	15–30
<i>Malcolm J. Hawkesford</i>	
Summary	15
I. Introduction	16
II. Sulfate Transport in Cyanobacteria	16
III. Sulfate Transport in Algae and Aquatic Plants	17
IV. A Family of Sulfate Transporters in Higher Plants	18
V. Transport into the Chloroplast	22
VI. Fluxes of Sulfate around the Plant	23
VII. Regulation by Availability and Demand	24
VIII. Signal Transduction Pathway	25
IX. Perspective	26
Acknowledgements	26
References	26

3	Phylogenetic Analysis of Sulfate Assimilation and Cysteine Biosynthesis in Phototrophic Organisms	31–58
	<i>Stanislav Kopriva, Nicola J. Patron, Patrick Keeling, and Thomas Leustek</i>	
	Summary	32
	I. Introduction	32
	II. Occurrence of Sulfate Assimilation in Different Taxa	35
	III. Phylogenetic Analysis of Sulfate Assimilation Genes	35
	IV. Protein Complexes and Fusions	52
	V. Conclusions	53
	Acknowledgements	53
	References	53
4	Metabolism of Cysteine in Plants and Phototrophic Bacteria	59–91
	<i>Rüdiger Hell, Markus Wirtz</i>	
	Summary	59
	I. Introduction	60
	II. Cysteine Synthesis in Prokaryotes	60
	III. Cysteine Synthesis in Plants and Algae	62
	IV. Structure of Proteins of Cysteine Synthesis in Bacteria and Plants	66
	V. S-transfer Reactions and Degradation of Cysteine	72
	VI. Regulation of Cysteine Flux in Plants	77
	References	84
5	Metabolism of Methionine in Plants and Phototrophic Bacteria	93–110
	<i>Holger Hesse, Rainer Hoefgen</i>	
	Summary	93
	I. Introduction	93
	II. Biosynthesis of Methionine Precursors via Alternate Pathways	96
	III. Transsulfuration Process to Form Homocysteine	97
	IV. Formation of Methionine by Transmethylation	98
	V. Methionine Recycling	99
	VI. Regulatory Aspects of Methionine Homeostasis	101
	References	106
6	Sulfotransferases from Plants, Algae and Phototrophic Bacteria	111–130
	<i>Cinta Hernández-Sebastià, Luc Varin, and Frédéric Marsolais</i>	
	Summary	111
	I. Introduction	112
	II. Nomenclature	114
	III. Molecular Phylogeny of Plant Sulfotransferases	114
	IV. Enzymatic Mechanism and Structural Requirements	117
	V. Functional Characterization of Plant Sulfotransferases	119
	VI. Sulfotransferases in Algae and Phototrophic Bacteria	124
	VII. Future Prospects in Sulfotransferase Research	127
	Acknowledgements	128
	References	128

**7 Cysteine Desulfurase-Mediated Sulfur Donation Pathways
in Plants and Phototrophic Bacteria** **131–147**
*Lolla Padmavathi, Hong Ye, Elizabeth AH Pilon-Smits, and
Marinus Pilon*

Summary	131
I. Introduction	132
II. Iron–Sulfur Cluster Assembly	132
III. Iron–Sulfur Cluster Dependent Cofactor Assembly Pathways	140
IV. Synthesis of Thiamine	141
V. Synthesis of Molybdenum Cofactor	141
VI. Conclusions and Outlook	143
Acknowledgements	143
References	144

Part II: Sulfur in Plants and Algae

**8 Molecular Biology and Functional Genomics for Identification
of Regulatory Networks of Plant Sulfate Uptake
and Assimilatory Metabolism** **149–159**
Hideki Takahashi, Kazuki Saito

Summary	149
I. Sulfate Transport Systems in Plants	150
II. Regulation by Sulfur	151
III. The <i>cis</i> -Acting Element of Sulfur Response	152
IV. Regulation by Nitrogen and Carbon	152
V. Plant Hormone Signals	153
VI. Prospects of Transcriptome and Metabolome Analyses for Novel Gene Findings	154
References	156

**9 Biosynthesis, Compartmentation and Cellular Functions
of Glutathione in Plant Cells** **161–184**
Andreas J. Meyer, Thomas Rausch

Summary	161
I. Introduction	162
II. Biosynthesis of Glutathione	162
III. Compartmentation of Glutathione Metabolism in Plants	166
IV. Cellular Functions of Glutathione in Plants	170
Acknowledgements	178
References	178

10 Sulfolipid Biosynthesis and Function in Plants **185–200**
Christoph Benning, R. Michael Garavito, and Mie Shimojima

Summary	185
I. Introduction	186
II. Biosynthesis of Sulfoquinovosyldiacylglycerol	188
III. Evolution of Sulfolipid Biosynthesis	191

IV. Biological Function of Sulfolipid	192
V. Biotechnological Applications and Production of Sulfolipids	194
VI. Concluding Remarks	195
Acknowledgements	195
References	195

11 Sulfur-Containing Secondary Metabolites and Their Role in Plant Defense **201–222**

Meike Burow, Ute Wittstock, and Jonathan Gershenzon

Summary	201
I. Introduction	202
II. Sulfur and Activated Plant Defense	202
III. Induced Defense by Sulfur and Sulfur-Containing Compounds	210
IV. Constitutive Sulfur-Containing Defenses	213
Acknowledgements	215
References	216

12 Sulfite Oxidation in Plants **223–230**

Robert Hänsch, Ralf R. Mendel

Summary	223
I. Sulfur Cycling in Nature	223
II. Sulfate Reduction in Plants	224
III. The Ambivalent Nature of Sulfite: an Important but Toxic Intermediate	224
IV. Sulfite Oxidase Activities in Plants	225
V. Biochemical Properties of Plant Sulfite Oxidase (EC 1.8.3.1)	226
VI. Plant Sulfite Oxidase is a Peroxisomal Enzyme	227
VII. Compartmentalization of Sulfur Metabolism	228
Acknowledgements	228
References	229

13 The State of Sulfur Metabolism in Algae: From Ecology to Genomics **231–267**

Nakako Shibagaki, Arthur Grossman

Summary	232
I. Algae and the Global Sulfur Cycle	232
II. Sulfur Metabolism	233
III. Non-Protein Sulfur Compounds	242
IV. Selenocysteine Metabolism	248
V. Adaptation and Acclimation to S Deficiency	248
VI. Regulatory Mechanisms Controlling Responses to S Deficiency	253
VII. Interactions between Nutrient Pools	255
VIII. Concluding Remarks	256
Acknowledgements	256
References	257

Part III: Sulfur in Phototrophic Prokaryotes

14 Systematics of Anoxygenic Phototrophic Bacteria	269–287
<i>Johannes F. Imhoff</i>	
Summary	269
I. Introduction	270
II. Phototrophic Purple Sulfur Bacteria – <i>Chromatiales</i>	272
III. Phototrophic Purple Nonsulfur Bacteria	275
IV. Phototrophic Green Sulfur Bacteria – <i>Chlorobiales</i>	280
References	283
15 Inorganic Sulfur Compounds as Electron Donors in Purple Sulfur Bacteria	289–317
<i>Christiane Dahl</i>	
Summary	289
I. Introduction	290
II. Sulfur Oxidation Capabilities of Anoxygenic Phototrophic Bacteria	291
III. Electron Transport in Purple Sulfur Bacteria	295
IV. Biochemistry of Sulfur Oxidation Pathways in Purple Sulfur Bacteria	296
Acknowledgements	311
References	311
16 Sulfide Oxidation from Cyanobacteria to Humans: Sulfide-Quinone Oxidoreductase (SQR)	319–335
<i>Yosepha Shahak, Günther Hauska</i>	
Summary	320
I. Introduction	320
II. Discovery and Development of Studies	321
III. Characterization	321
IV. Physiological Considerations	330
V. Phylogenetic Aspects	331
VI. Concluding Remark	333
Acknowledgements	333
References	333
17 Genomic Insights into the Sulfur Metabolism of Phototrophic Green Sulfur Bacteria	337–355
<i>Niels-Ulrik Frigaard, Donald A. Bryant</i>	
Summary	338
I. Introduction	338
II. Sulfur Compounds Oxidized for Growth	340
III. Sulfur Compound Oxidation Enzymes	340
IV. Other Enzymes Related to Sulfur Compound Oxidation	349
V. Non-Sulfurous Compounds Oxidized for Growth	351
VI. Assimilatory Sulfur Metabolism	352

VII. Evolution of Sulfur Metabolism	352
Acknowledgements	353
References	353

**18 Genetic and Proteomic Studies of Sulfur Oxidation
in *Chlorobium tepidum* (syn. *Chlorobaculum tepidum*)** **357–373**

Leong-Keat Chan, Rachael Morgan-Kiss, and Thomas E. Hanson

Summary	357
I. Introduction	358
II. Genetic Studies	364
III. Proteomic Studies	367
IV. Conclusions	368
Acknowledgements	369
References	369

Part IV: Ecology and Biotechnology

19 Ecology of Phototrophic Sulfur Bacteria **375–396**

Jörg Overmann

Summary	375
I. Introduction	376
II. Habitats and Natural Populations of Phototrophic Sulfur Bacteria	376
III. Biogeochemical Significance of Phototrophic Sulfur Bacteria	386
IV. Phototrophic Sulfur Bacteria in the Past: Interpretation of Molecular Fossils	388
Acknowledgements	391
References	391

**20 Role of Sulfur for Algae: Acquisition, Metabolism,
Ecology and Evolution** **397–415**

Mario Giordano, Alessandra Norici, Simona Ratti, and John A. Raven

Summary	397
I. Introduction	398
II. Sulfur Availability in Aquatic Ecosystems	398
III. Sulfur Acquisition by Algae	401
IV. Assimilation and Reduction of Sulfate by Algae	402
V. Interactions Between S and C, N, P Metabolism	403
VI. Algae are the Main Source of Biogenic Reduced Sulfur in the Environment	404
VII. Sulfur Availability may have Played a Role in Algal Evolution, Succession and Distribution	407
Acknowledgements	408
References	408

21	Role of Sulfur for Plant Production in Agricultural and Natural Ecosystems	417–435
	<i>Fang-jie Zhao, Michael Tausz, and Luit J. De Kok</i>	
	Summary	417
	I. Introduction	418
	II. Uptake, Assimilation and Distribution of Sulfur	418
	III. Significance of Sulfur in Plant Functioning and Adaptation to Stress and Pests	421
	IV. Plant Sulfur Requirement and Nutrition in Agro- and Natural Ecosystems	424
	V. Sulfur and Food Quality	426
	Acknowledgements	428
	References	428
22	Using Anoxygenic Photosynthetic Bacteria for the Removal of Sulfide from Wastewater	437–460
	<i>Timothy J. Hurse, Ulrike Kappler, and Jürg Keller</i>	
	Summary	438
	I. Introduction	438
	II. Suitable Bacterial Species	439
	III. Overview of Reactor Concepts	447
	IV. Reactor Performance	448
	V. Conceptual Model of the Substratum-Irradiated Biofilm	455
	VI. Implications for Process Scale-up and Future Research Directions	455
	References	458

Part V: Specific Methods

23	X-ray Absorption Spectroscopy as Tool for the Detection and Identification of Sulfur Compounds in Phototrophic Organisms	461–482
	<i>Alexander Prange, Josef Hormes, and Hartwig Modrow</i>	
	Summary	462
	I. Introduction	462
	II. X-ray Absorption Spectroscopy – an Elementary Introduction	462
	III. X-ray Absorption-near edge structure (XANES) Spectroscopy Measurements of Sulfur Compounds	471
	IV. Application of XANES Spectroscopy to Investigate Sulfur in Phototrophic Organisms	474
	Acknowledgements	480
	References	480

24	Imaging Thiol-Based Redox Processes in Live Cells	483–501
	<i>Andreas J. Meyer, Mark D. Fricker</i>	
	Summary	483
	I. Introduction	484
	II. General Strategies of Probe Design to Image Components of Redox Pathways	485
	III. Quantitative Confocal Fluorescence Imaging	488
	IV. Application of Thiol-Based Redox Imaging in Plants	489
	V. Probes for Components that Interact with Thiols	493
	VI. Conclusion and Future Perspectives	497
	Acknowledgements	497
	References	498
