CONTENTS

Preface v

Chapter 1. Nature of soils 1
1.1 Introduction 1
Soil from a physical viewpoint 1
Importance of physical properties 2
1.2 Origin of soil 2
1.3 Soil classification 4
1.4 Procedure for the mineralogical analysis of soils 5
1.5 Particle-size composition of soils 8
Measurement of particle-size distribution 10
Principles of sedimentation analysis 11
Interpretation of accumulation curves 13
1.6 Basic soil properties 16
Weight and volume 16
Consistency limits 17
1.7 Summary 19

Chapter 2. Clay minerals in soils 21
2.1 Introduction 21
2.2 Nature of clay minerals 21
Definition 21
Structure 22
2.3 Clay minerals common in soils 26
Kaolinite 26
Chlorite 27
Clay mica (illite) 28
Montmorillonite 30
Vermiculite 31
Interstratified minerals 32
Allophane 33
Attapulgite 34
Clay-mineral mixtures 34
Weathering of clay minerals 34
Occurrence of clay minerals in soils 35
2.4 Identification of clay minerals 36

X-ray diffraction . . . 37
Differential thermal analysis . . . 42
Infrared spectroscopy . . . 44
Electron microscopy . . . 46
2.5 Surface area of clays . . . 46
2.6 Water and ion adsorption at clay surfaces . . . 48
Hydration of clays . . . 48
Electric charge . . . 49
Exchangeable cations . . . 52
Diffuse ion-layers . . . 55
2.7 Interaction of clay particles . . . 58
Repulsion . . . 59
Attraction . . . 59
Particle arrangement . . . 61
Flocculation and dispersion . . . 61
2.8 Plasticity . . . 62
Liquid and plastic limits . . . 62
Interpretation of plastic limit and liquid limit . . . 65
2.9 Rheotropy . . . 68
Rest-hardening and structure . . . 69
2.10 Summary . . . 70

Chapter 3. Soil fabric and structure . . . 71
3.1 Introduction . . . 71
3.2 Structure and fabric . . . 71
3.3 Granular soil packing . . . 72
3.4 Clay soil fabric . . . 77
Fabric classification . . . 79
Particle arrangement in fabric units . . . 82
First- and second-order fabric characterization . . . 85
3.5 Pore spaces and fabric . . . 86
3.6 Techniques for direct fabric viewing . . . 88
3.7 Quantification of fabric . . . 92
3.8 Fabric characteristics from sedimentation . . . 96
Fresh-water deposition . . . 96
Deposition in salt water . . . 98
3.9 Fabric alteration by compaction and compression . . . 99
3.10 Summary . . . 100

Chapter 4. Soil water
4.1 Introduction . . . 101
4.2 Water content and its measurement . . . 101
Definitions . . . 101

Indirect measurement of water content 104
4.3 The concept of soil-water potential 106
Buckingham's capillary potential 106
Component potentials 108
Formulation from reversible thermodynamics 110
Formulation from irreversible thermodynamics 111
Geometric concepts and soil-water potential 112
Terminology and units 115
4.4 Water retention in soils 116
Retention curves for different soils 116
Forces of water retention in soils 119
Hysteresis 122
4.5 Measurement of soil-water potential 124
Measurement of water content at applied potentials 124
Measurement of potential in situ 127
Indirect measurements of potential 130
4.6 Secondary effects on water retention 132
Entrapped air 132
Temperature 132
Effect of drying 133
Rate of potential change 134
Overburden load effects 134
Fabric effects 135
4.7 Use of the potential concept 135
General 135
Predicting water under covered areas or in swelling soils 137
Use of soil-water potential for clay soils 138
4.8 Summary 139

Chapter 5. Water movement in soils 141
5.1 Introduction 141
5.2 Saturated flow 143
Darcy's equation 143
Kozeny-Carmen relationship 144
Layered soils 147
Factors affecting saturated flow 149
Saturated flow in clays 150
Steady-state flow 154
5.3 Unsaturated flow 157
General considerations 157
Unsaturated flow equations for no volume change 159
Unsaturated flow equations for volume-change cases 163
A generalized unsaturated flow equation 166

5.4 Moisture profiles and wetting front advance 168
Diffusivity functions 170
5.5 Measurement of unsaturated hydraulic conductivity, k or D . . . 173
Steady state, k 174
Steady state, D 174
Outflow method for k 175
Infiltration method for D 176
Field measurement of k 176
Calculation of k from void-size distribution 178
5.6 Unsaturated flow mechanisms and behaviour 178
Interaction of salt and clay 178
Swelling in unsaturated flow 180
Flow in allophane clays 184
Flow due to thermal gradients 184
Effect of solute gradients 189
5.7 Infiltration into soils in the field 190
Distribution of water during infiltration 190
Infiltration equations 193
Factors affecting infiltration into soils 193
Field capacity 194
5.8 Summary 195

Chapter 6. Volume changes in clay soils 197
6.1 Introduction 197
6.2 Shrinking 199
Soil characteristics affecting shrinkage 199
Crack formation during shrinking 205
Measurement of shrinkage for samples 206
6.3 Swelling 207
Soil characteristics affecting swelling 207
Swelling pressure of soils 210
Mechanism of swelling 212
Summary of swelling 216
6.4 Volume changes in the field 217
Prediction of heave from soil properties 220
6.5 Summary 222

Chapter 7. Consolidation and compression 223
7.1 Introduction 223
Compressibility, consolidation and creep 224
Effective stresses 226
7.2 Consolidation of clay 228
Review of the theory for one-dimensional consolidation 229

7.3 Laboratory consolidation test 235
Estimation of total compression 238
7.4 Time and load-deformation curves 240
Load-increment ratio 246
7.5 Soil structure in consolidation and compression 247
Fabric changes in compression 251
Temperature effect 253
Structure and creep 253
7.6 Summary 259

Chapter 8. Yield and failure 261
8.1 Introduction 261
The concepts of yield and failure in soils 262
Principal stress space 264
8.2 Yield criteria 265
The maximum-stress theory 265
The maximum elastic-strain theory 267
The constant elastic-strain energy theory 267
The maximum shear-stress theory 267
The constant elastic strain-energy-of-distortion theory 269
8.3 Failure theories 271
8.4 Laboratory triaxial test techniques for strength measurement . . . 276
Axisymmetric triaxial test 278
8.5 Principal stress space and admissible yield or failure criteria 282
The plastic potential 286
8.6 Summary 289

Chapter 9. Granular soil strength 293
9.1 Introduction 293
9.2 Friction properties 293
Apparent friction parameter, ϕ 294
Sliding and interlocking friction 301
9.3 Laboratory measurement of granular soil strength 302
Measurement of friction angle, ϕ 302
Stress and strain 304
9.4 The intrinsic friction angle 306
9.5 Volumetric strain 307
9.6 Summary 314

Chapter 10. Cohesive soil strength 317
10.1 Introduction 317
Analytical and physical strength parameters 317
10.2 Pore-water pressure 318

Components of pore-water pressure – fully saturated soil . . . 318
Pore pressures in a partly saturated clay 321
Practical considerations in pore-water measurements 322
Pore-pressure coefficients 323
Laboratory determination of pore-pressure coefficients 327
10.3 Analytical shear strength parameters (from Mohr-Coulomb failure theory) 329
10.4 Mechanisms for development of shear strength 335
Physical and physico-chemical components of friction and cohesion 335
Fabric units and bonding in shear strength 338
Shear strength interpreted from interparticle forces 340
10.5 Strength and soil structure 350
Fabric and soil-water potential 350
Interpretation of fabric change from Mohr-Coulomb diagram . . 352
Anisotropic effects 356
10.6 Some methods and mechanisms for laboratory evaluation of strength parameters 360
Separation of shear strength into cohesion and friction parameters 360
Reaction rates and rate process 364
10.7 Yield and failure 367
Plasticity analysis 371
Yielding of bonded and unbonded clays 376
Failure 377
10.8 Summary 381

Chapter 11. Soil freezing and permafrost 383
11.1 Introduction 383
11.2 Geothermal profile 384
11.3 Freezing index 387
11.4 Frost penetration 388
Diffusion 389
Estimation of depth of frost penetration 391
11.5 Freezing in coarse-grained soils 397
11.6 Freezing in fine-grained soils 402
11.7 Heave and frost heaving pressures 406
Calculation of frost heaving pressures 406
Constraints and heaving pressures 408
11.8 Unfrozen water in frozen soils 411
Soil-water potential and unfrozen water 413
Water movement in frozen soils 414
11.9 Field frost heaving 416

11.10 Thermal erosion 417
11.11 Summary 419

Appendix 1. Intermolecular attraction, the hydrogen bond and the structure of water 421

Appendix 2A. Theoretical distribution of exchangeable ions around a single clay particle 423

Appendix 2B. Theoretical distribution of cations between two charged plates . 427

Appendix 3. Soil flux and volume change in unsaturated-flow equations . . 429
