Contents

Introduction 1

Part 1 Soil Conditions

1.1 Strength-Determining Factors 4
1.2 Variation of Strength-Determining Factors in the Course of Time 5
1.3 Influences of Soil Type on Strength-Determining Factors . . 7
1.4 Soil Prepared for Laboratory Experiments 8

Part 2 Mechanical Behavior of Soil Elements

2.1 General Aspects of the Mechanical Behavior of Soil Elements 9
2.1.1 Small Volume Elements Instead of Large Soil Bodies . 9
2.1.2 Stress Theory 10
2.1.2.1 Stress Tensor 10
2.1.2.2 Mohr's Graphical Representation 15
2.1.2.3 Uniform Stress Distribution in Finite Soil Bodies 15
2.1.3 Strain Theory 16
2.1.4 Stress-Strain Relations 18

2.2 Elemental Treatment of Compaction 21
2.2.1 Occurrence of Compaction 21
2.2.2 Fundamentals 23
2.2.2.1 Measures of Compaction 23
2.2.2.2 General Model for Rapid Soil Compaction . . 23
2.2.2.3 Effects of Loading Rate, Repeated Loading, and Vibrations 30
2.2.2.4 Soil Physical Aspects 31
2.2.2.5 Slow Compression 33
2.2.3 Applications 34
2.2.3.1 Estimation of Soil Compaction by Means of Estimated Stress Distributions 34
2.2.3.2 Curve Fitting Formulas for Compression Tests . 39
2.2.3.3 Håkansson's Compaction Test 41

2.2.3.4 Simulating Tire Effect by a Uni-Axial Compression Test 41
2.2.3.5 Predicting Soil Density Following Irrigation . . 43
2.2.3.6 Complexity of Compactibility Concept 43

2.3 Elemental Treatment of Deformation (Distortion) 44
2.3.1 Occurrence of Distortional Strain 44
2.3.2 Fundamentals 46
2.3.2.1 Introduction 46
2.3.2.2 Deformation at Constant Volume 46
2.3.2.3 Distortion Combined with Compaction 50
2.3.2.4 Expansion at Breaking 52
2.3.3 Applications 55
2.3.3.1 Stress-Deformation Models 55
2.3.3.2 Determination of the Liquid Limit with a Rotary Viscosimeter 58
2.3.3.3 Distortion Combined with Compaction, Estimated Using the Flow Rule 59
2.3.3.4 Estimation of Distortion Combined with Compaction for Sand 60

2.4 Elemental Treatment of Breaking 60
2.4.1 Occurrence of Breaking 60
2.4.2 Fundamentals 62
2.4.2.1 Measures of Resistance Against Breaking . . . 63
2.4.2.2 Shear Failure 64
2.4.2.3 Tensile Failure 72
2.4.2.4 Loading Rate and Repeated Loading Effects . . 73
2.4.2.5 Soil Physical Aspects of Shear Strength 74
2.4.3 Applications 78
2.4.3.1 Methods to Determine the Measures of Strength Indirectly 78
2.4.3.2 A Few Applications of the Modulus of Rupture 79
2.4.3.3 Draft Calculations Using Hypothesized Mechanisms of Rigid Soil Bodies 79
2.4.3.4 The Influence of Moisture Content at Seedbed Preparation on Plowing Resistance After Harvest 80

2.5 Elemental Treatment of Soil-Material Friction and Adherence 81
2.5.1 Occurrence 81
2.5.2 Fundamentals 82
2.5.3 Applications 88
2.5.3.1 The $\sigma_n - \sigma_1$ Ratio of a Soil Element at a Soil-Material Interface 88
2.5.3.2 Attempts to Reduce Soil-Material Friction and Soil Adherence 90

Part 3 Load Bearing and Soil Loosening Processes

3.1 General Aspects of Processes 91
3.1.1 Soil Tillage Processes Instead of Element Behavior . . 91
3.1.2 Description of the Variation of Forces and Movements in a Soil Tillage Process 92
3.1.2.1 Velocity Fields 92
3.1.2.2 Strain Fields 93
3.1.2.3 Stress Fields 93
3.1.2.4 Process Variations in Time 94
3.1.3 Basic Process Conditions 94
3.1.4 Prediction of Forces and Movements in Processes . . . 95
3.1.4.1 Prediction Methods Mainly Based on Observations of Relationships Between Independent and Dependent Variables 96
3.1.4.2 Prediction Methods Mainly Based on Knowledge of the Mechanism of the Process Under Consideration 103
3.1.5 Types of Processes 104

3.2 Rollers, Wheels, and Tires 105
3.2.1 Occurrence 105
3.2.2 Fundamentals 110
3.2.2.1 Kinematic Aspects of Rolling Elements 110
3.2.2.2 Dynamic Aspects of Rolling Elements 119
3.2.2.3 Systems of Rollers, Wheels, and/or Tires . . . 131
3.2.3 Applications 133
3.2.3.1 Estimating the Pull a Tire is Able to Develop . 133
3.2.3.2 Estimation of the Mean Contact Stress of a Deflected Tire on a Rigid Surface 136
3.2.3.3 Estimation of the Area of Contact Between a Tire and a Rigid Surface 136
3.2.3.4 Relative Tire Deflection at Maximum Load . . 137
3.2.3.5 Optimal Slip Percentage 137

3.3 Penetrating Bodies (Wedges, Cones, Plates, Wires, Spheres) . 139
3.3.1 Occurrence 139
3.3.2 Fundamentals 140
3.3.2.1 Kinematic Aspects 140
3.3.2.2 Dynamic Aspects 144
3.3.3 Applications 147
3.3.3.1 Fitting Formulas for Plate Tests 147
3.3.3.2 Bekker's Sinkage and Rolling-Resistance Theory for Rigid Wheels 147

3.3.3.3 Correlations Between Cone Tests and Wheel Performance . . . 149
3.3.3.4 Quick Determination of a Soil Mechanical or Physical Property . . . 150
3.3.3.5 Determination of the Maximum Normal Stress That Has Ever Acted on a Soil Surface . . . 152
3.3.3.6 Other Applications of Penetrometers . . . 154

3.4 Sliding and Shearing Bodies . . . 155

3.4.1 Occurrence . . . 155
3.4.2 Fundamentals . . . 155
3.4.2.1 Kinematic Aspects . . . 155
3.4.2.2 Dynamic Aspects . . . 162

3.4.3 Applications . . . 165
3.4.3.1 Fitting Formulas for Shear Force-Horizontal Displacement Relationships . . . 165
3.4.3.2 Resistance Approximations for Sliding and Shearing Bodies . . . 166
3.4.3.3 Pull-Slip Relationships for Spaced-Link Tracks . 167
3.4.3.4 Estimation of Rut Depth and/or Trim Angle of a Sled . . . 168
3.4.3.5 Estimating c and ϕ Using Shear Plates or Annuli 169
3.4.3.6 Wall Friction of Cone Penetrometer Rods . . . 171

3.5 Tracks, Cage Rollers, and Cage Wheels . . . 171

3.5.1 Occurrence . . . 172
3.5.1.1 Tracks . . . 172
3.5.1.2 Cage Rollers . . . 174
3.5.1.3 Cage Wheels . . . 175

3.5.2 Fundamentals . . . 176
3.5.2.1 Kinematic Aspects . . . 176
3.5.2.2 Dynamic Aspects . . . 178

3.5.3 Applications . . . 183
3.5.3.1 Estimation of the Maximum Stress in the Contact Area of a Track on Soil . . . 183

3.6 Tines . . . 184

3.6.1 Occurrence . . . 184
3.6.2 Fundamentals . . . 187
3.6.2.1 Kinematic Aspects . . . 187
3.6.2.2 Dynamic Aspects . . . 191

3.6.3 Applications . . . 193
3.6.3.1 The Profile of a Furrow Made by a Tine . . . 193
3.6.3.2 Draft of Plane Blades and Tines Operating in a Saturated Clay . . . 194

3.7 Plow Bodies 196
3.7.1 Occurrence 196
3.7.2 Fundamentals 197
3.7.2.1 Kinematic Aspects of Two-Dimensional, Curved Blade with a Small Cutting Angle and a Small Working Depth/Blade Height Ratio 199
3.7.2.2 Kinematic Aspects of Other Plow Bodies . . . 208
3.7.2.3 Dynamic Aspects 215
3.7.3 Applications 216
3.7.3.1 Plowing Draft as Affected by Soil Moisture Content 216
3.7.3.2 Plowing Draft as Affected by Speed 217
3.7.3.3 Draft Force as Affected by Slades, Supporting Wheels, and Inclined Directions of Pull 218
3.7.3.4 Predicting Type of Intake from Unconfined Compression Tests 218

Appendix

Mathematical Treatment of Finite Homogeneous Strains in Two Dimensions 220
