Preface

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Introduction: The soil as a reactor between the earth's atmosphere and the subsurface</b>         | <b>1</b>  |
| <b>2</b> | <b>Mechanical composition of mineral soils</b>   | <b>2</b>  |
| 2.1      | Soil texture   | 2         |
| 2.1.1    | Mechanical analysis  | 2         |
| 2.1.2    | Grain size distribution  | 3         |
| 2.1.3    | Textural classes   | 7         |
| 2.2      | Soil structure   | 8         |
| <b>3</b> | <b>Basic parameters of bulk soil</b>   | <b>9</b>  |
| 3.1      | Macroscopic approach   | 9         |
| 3.2      | Soil as a three-phase system   | 9         |
| 3.3      | Standard values of bulk density  | 14        |
| <b>4</b> | <b>Soil water balance in the field</b>   | <b>16</b> |
| 4.1      | Water balance equation   | 16        |
| 4.1.1    | Precipitation  | 17        |
| 4.1.2    | Surface runoff   | 19        |
| 4.1.3    | Evapotranspiration   | 19        |
| 4.1.4    | A first approximation to real evapotranspiration and groundwater recharge                            | 23        |
| 4.1.5    | Simplified approach to drainage and capillary rise   | 24        |
| 4.1.6    | The soil water storage term  | 26        |
| 4.2      | Measurement of soil water content in the field   | 27        |
| 4.3      | Simulation of water storage in soil  | 29        |
| 4.3.1    | Spreadsheet model of soil water storage (see Appendix, files "Simulations.xls" or "Simulations.sxc") | 30        |
| 4.3.2    | Simple multi-layer soil water balance simulation model (see Appendix, files "Swb")                   | 31        |
| <b>5</b> | <b>Energy status of water in soil</b>  | <b>33</b> |
| 5.1      | Total potential of soil water  | 33        |
| 5.2      | Gravitational potential  | 35        |
| 5.3      | Solute potential   | 36        |
| 5.4      | Tensiometer pressure potential   | 38        |
| 5.4.1    | Air pressure potential   | 38        |
| 5.4.2    | Overburden potential   | 38        |
| 5.4.3    | Hydrostatic pressure potential   | 39        |
| 5.4.4    | Wetness and matrix potential   | 39        |
| 5.5      | Soil water potential related to flow phenomena   | 40        |
| 5.6      | Soil water potential and vapor pressure  | 43        |
| 5.7      | Measurement of soil water potential  | 43        |
| <b>6</b> | <b>Water retention in soil</b>   | <b>46</b> |
| 6.1      | Capillary tubes  | 46        |
| 6.2      | Soil water retention curve   | 48        |

|          |  |           |
|----------|--|-----------|
| 6.2.1    | Fundamentals   | 48        |
| 6.2.2    | Differential water capacity, air entry point, and residual water content | 50        |
| 6.2.3    | Pore size distribution   | 51        |
| 6.2.4    | Effect of temperature on pressure head                                   | 52        |
| 6.2.5    | Hysteresis   | 52        |
| 6.3      | Mathematical functions representing the water retention curve            | 53        |
| 6.3.1    | Introduction   | 53        |
| 6.3.2    | The Brooks and Corey model   | 54        |
| 6.3.3    | The van Genuchten model  | 56        |
| 6.3.4    | Multi-porosity models  | 58        |
| 6.4      | Obtaining soil water retention data                                      | 59        |
| 6.4.1    | Field measurements   | 59        |
| 6.4.2    | Laboratory methods   | 60        |
| 6.4.3    | Estimation of soil water retention from non-hydraulic soil properties    | 63        |
| <b>7</b> | <b>Flow of water through saturated soil</b>                              | <b>64</b> |
| 7.0      | Introduction   | 64        |
| 7.1      | Flow through capillary tubes   | 64        |
| 7.2      | Darcy's law  | 65        |
| 7.3      | Steady-state flow of water in saturated soil                             | 68        |
| 7.4      | Saturated soil hydraulic conductivity                                    | 70        |
| 7.4.1    | Specific permeability  | 70        |
| 7.4.2    | Estimation of saturated hydraulic conductivity                           | 71        |
| 7.4.2.1  | Laboratory measurements  | 71        |
| 7.4.2.2  | Field methods  | 73        |
| 7.4.2.3  | Statistical data processing  | 74        |
| 7.4.2.4  | Criticism and conclusions  | 74        |
| 7.4.2.5  | Prediction of saturated soil hydraulic conductivity                      | 75        |
| 7.4.2.6  | Flow of water through saturated layered soil                             | 76        |
| <b>8</b> | <b>Groundwater flow</b>  | <b>80</b> |
| 8.1      | Comment  | 80        |
| 8.2      | Some basic terms of groundwater hydrology                                | 80        |
| 8.3      | Groundwater flow net   | 81        |
| 8.4      | Aquifer  | 82        |
| 8.4.1    | Hydraulic properties   | 82        |
| 8.4.2    | Confined aquifer   | 84        |
| 8.5      | Groundwater recharge and groundwater balance                             | 85        |
| 8.6      | Steady-state groundwater flow  | 87        |
| 8.6.1    | One-dimensional flow   | 87        |
| 8.6.1.1  | Introduction   | 87        |
| 8.6.1.2  | Groundwater flow equation  | 89        |
| 8.6.2    | Steady-state groundwater flow toward wells                               | 92        |
| 8.7      | Groundwater flow: The general case                                       | 93        |
| 8.8      | Closing remarks  | 95        |
| <b>9</b> | <b>Flow through unsaturated rigid soil</b>                               | <b>96</b> |
| 9.1      | Fundamentals   | 96        |
| 9.2      | Steady-state flow  | 97        |
| 9.3      | Transient flow   | 99        |

|           |   |            |
|-----------|---|------------|
| 9.4       | Solutions to flow equations   | 102        |
| <b>10</b> | <b>Unsaturated soil hydraulic conductivity</b>                                    | <b>105</b> |
| 10.1      | Introduction  | 105        |
| 10.2      | Models of unsaturated soil hydraulic conductivity                                 | 106        |
| 10.2.1    | Gardner's equations   | 106        |
| 10.2.2    | The Burdine and Brooks and Corey theory   | 107        |
| 10.2.3    | The Mualem and van Genuchten theories   | 109        |
| 10.3      | Measurement of unsaturated hydraulic conductivity                                 | 112        |
| 10.3.1    | Overall view  | 112        |
| 10.3.2    | Steady-state evaporation or seepage   | 112        |
| 10.3.3    | Steady-state infiltration field methods: The disc infiltrometer                   | 115        |
| 10.3.4    | Non-steady laboratory methods   | 117        |
| 10.3.5    | Non-steady field methods  | 118        |
| 10.4      | Prediction of unsaturated hydraulic conductivity                                  | 122        |
| 10.4.1    | Predictions based on soil water retention   | 122        |
| 10.4.2    | Pedotransfer functions  | 122        |
| 10.4.3    | Data bases  | 125        |
| <b>11</b> | <b>Elementary soil hydrologic processes</b>                                       | <b>128</b> |
| 11.1      | Introduction  | 128        |
| 11.2      | Steady-state vertical flow: Capillary rise and constant flux infiltration         | 129        |
| 11.3      | Infiltration  | 134        |
| 11.3.1    | Introduction  | 134        |
| 11.3.2    | Vertical infiltration under pressure head boundary condition                      | 135        |
| 11.3.2.1  | Philip's infiltration formula   | 137        |
| 11.3.2.2  | Haverkamp's equation  | 139        |
| 11.3.2.3  | The Green and Ampt method   | 140        |
| 11.3.3    | Vertical infiltration under flux boundary condition                               | 143        |
| 11.3.4    | Complicating phenomena occurring in field situations                              | 143        |
| 11.3.4.1  | Crust-topped and layered soils  | 143        |
| 11.3.4.2  | Fingering and preferential flow   | 145        |
| 11.3.5    | Redistribution  | 145        |
| 11.3.6    | Infiltration-based methods to estimate soil hydraulic properties                  | 146        |
| 11.3.7    | Two-dimensional, flux boundary condition infiltration from line and point sources | 149        |
| 11.4      | Internal drainage   | 151        |
| 11.4.1    | Introduction  | 151        |
| 11.4.2    | Internal drainage of groundwater-affected soils                                   | 152        |
| 11.4.3    | Unit gradient drainage  | 155        |
| 11.4.4    | The concept of field capacity   | 156        |
| 11.5      | Drying of bare soil by evaporation  | 158        |
| 11.6      | Soil hydrologic processes and Burgers' equation                                   | 159        |
| <b>12</b> | <b>Coupled heat and water flow in soil</b>  | <b>161</b> |
| 12.1      | Thermal properties of soil  | 161        |
| 12.2      | Heat transport in soil  | 161        |
| 12.3      | Non-isothermal flow of water through soil   | 162        |
| 12.4      | Soil temperature changes in the field   | 164        |

|           |  |            |
|-----------|--|------------|
| <b>13</b> | <b>Solute transport in soil</b>                    | <b>166</b> |
| 13.1      | Introduction                                       | 166        |
| 13.2      | Basic processes                                    | 166        |
| 13.2.1    | Convection   | 166        |
| 13.2.2    | Hydrodynamic dispersion                            | 169        |
| 13.2.3    | Diffusion  | 170        |
| 13.2.4    | Total solute flux                                  | 172        |
| 13.3      | Chemical reactions                                 | 173        |
| 13.3.1    | Classification                                     | 173        |
| 13.3.2    | Fast reactions (Classes I through III)             | 173        |
| 13.3.3    | Slow reactions (Classes IV through VI)             | 176        |
| 13.4      | Simplified approach to solute transport prediction | 178        |
| 13.5      | Convection-Dispersion Equation (CDE)               | 179        |
| 13.5.1    | General problem                                    | 179        |
| 13.5.2    | The simplified CDE and solutions                   | 180        |
| 13.5.3    | Breakthrough curves and solutions to the CDE       | 181        |
| 13.5.3.1  | Experimental procedure and results                 | 181        |
| 13.5.3.2  | Analytical solutions to the CDE                    | 183        |
| 13.5.4    | Solute transport by groundwater flow               | 186        |
| 13.5.5    | Non-equilibrium and the mobile-immobile concept    | 188        |
| 13.6      | Parameter estimation                               | 189        |
| 13.7      | Stochastic descriptions of solute transport        | 190        |
| <b>14</b> | <b>Solute management: Soil salinization</b>        | <b>191</b> |
| 14.1      | Overview   | 191        |
| 14.2      | Leaching requirement                               | 193        |
| 14.3      | Salt distribution in soil                          | 194        |
| 14.3.1    | Irrigation balances root water uptake              | 194        |
| 14.3.2    | Irrigation on slowly permeable soils               | 196        |
| 14.4      | The ultimate sink for soil salinity - the ocean    | 199        |
| <b>15</b> | <b>Soil water and crops</b>                        | <b>200</b> |
| 15.1      | Soil moisture requirements                         | 200        |
| 15.1.1    | Optimal levels of plant available soil water       | 200        |
| 15.1.2    | Deficit irrigation                                 | 202        |
