Section I ***Integration of Soil Process Characterization***

Chapter 1 Multidisciplinary Approach for Assessing Subsurface Non-Point Source Pollution	1
Dennis L. Corwin and Keith Loague	
1.1 Introduction	2
1.1.1 Definition and Characteristics of NPS Pollution	3
1.1.2 The NPS Pollution Problem	4
1.1.2.1 The Issue of Health	4
1.1.2.2 Global Scope and Significance	5
1.1.2.3 Common NPS Pollutants	8
1.1.3 Justification for Assessing NPS Pollution in Soil	9
1.2 Multidisciplinary Approach for Assessing Subsurface NPS Pollutants	11
1.2.1 Deterministic Modeling Process	13
1.2.1.1 Model Conceptualization	14
1.2.1.2 Model Parameters	15
1.2.1.3 Verification	16
1.2.1.4 Sensitivity Analysis	16
1.2.1.5 Calibration	18
1.2.1.6 Validation	19
1.2.1.7 Simulation and Uncertainty Analysis	21
1.2.2 Spatial Factors to Consider When Modeling NPS Pollutants in Soil	23
1.2.2.1 Scale	23
1.2.2.2 Spatial Variability and Structure	25
1.2.3 Modeling NPS Pollutants in Soil	30
1.2.3.1 Data	31
1.2.3.1.1 Measured Data	31
1.2.3.1.2 Estimated Data	32
1.2.3.1.3 Existing Data	33
1.2.3.2 GIS	34

1.2.3.3	Models	36
1.2.3.3.1	GIS-Based Deterministic Models	37
1.2.3.3.2	GIS-Based Stochastic Models	38
1.2.4	Role of Geostatistics and Fuzzy Set Theory	39
1.3	Case Study	42
1.3.1	San Joaquin Valley Groundwater Vulnerability Study	42
	References	46
Chapter 2	Spatial and Temporal Variability of Soil Processes: Implications for Method Selection and Characterization Studies	59
	Chris G. Campbell and Fernando Garrido	
2.1	Introduction	60
2.1.1	Need for Field Studies	60
2.1.2	Preliminary Issues	61
2.1.2.1	Determinism in Soil Processes	63
2.1.2.2	Stochasticity in Soil Processes	63
2.2	On Spatial Variability	64
2.3	On Temporal Variability	67
2.4	Issues in Field Study Design	69
2.4.1	Issues of Scale	69
2.4.2	Characterizing Scale of Study	71
2.4.3	Irrigation, Solute Delivery, and Three-Dimensional Flow	73
2.5	Summary and Conclusions	75
	Acknowledgments	79
	Appendix: Breakthrough Curve Data Analysis	79
	Moment Analysis	79
	Temporal Analysis	80
	References	80
Chapter 3	Modeling as a Tool for the Characterization of Soil Water and Chemical Fate and Transport	87
	Javier Álvarez-Benedí, Rafael Muñoz-Carpena and Marnik Vanclooster	
3.1	Introduction	88
3.2	General Conceptualization of Soil Processes	90
3.2.1	Instantaneous Equilibrium	91
3.2.2	Irreversible Kinetics	92
3.2.3	Reversible kinetics	94
3.2.4	Transport	95
3.3	Soil-Water Transport Processes	96
3.3.1	Classical Description of Water Movement	96
3.3.2	Characterization of Water Content–Pressure Head and Hydraulic Conductivity–Pressure Head Relationships	98

3.3.3	Dual Porosity Models	100
3.4	Soil-Solute Transport Processes	101
3.4.1	Classical Description of Solute Movement	101
3.4.2	Nonequilibrium Models	102
3.4.3	Solute Dispersion.....	104
3.4.4	Sorption.....	107
3.4.5	Volatilization and Gas Solubility.....	109
3.4.6	Transformation.....	111
3.5	Modeling Soil Processes	113
3.5.1	Building Soil Processes Models	113
3.5.2	Inverse Characterization of Soil Processes.....	115
	Acknowledgments	115
	Notation.....	116
	References	117

Section II

Soil and Physical Processes: Energy and Water

Chapter 4	Techniques for Characterizing Water and Energy Balance at the Soil-Plant-Atmosphere Interface.....	123
	M. J. Polo, J. V. Giráldez, M. P. González-Dugo and K. Vanderlinden	
4.1	The Components of Water and Energy Balances: Description and Nature of Processes.....	124
4.1.1	Description and Nature of Processes and Associated Uncertainty	125
4.1.2	Different Approaches and Spatiotemporal Scales.....	127
4.1.3	Remote Sensing: Potential as a Global Data Source.....	128
4.2	Modeling of the Water and Energy Balance at the Soil-Plant-Atmosphere Interface and Scale Effects.....	129
4.2.1	The Use of Models for the Description of Soil-Plant-Atmosphere Exchange Processes.....	129
4.2.1.1	A Simple Water and Energy Balance Model: The Interaction between Land and Atmosphere	129
4.2.1.2	The Force Restore Approach	131
4.2.1.3	Dynamics of Soil Moisture Using a Simple Water Balance	132
4.2.1.4	Exploration of Optimal Conditions for Vegetation through a Water Balance Model.....	133
4.2.1.5	Strengths and Weaknesses	136
4.2.2	Interaction of Model Development and Temporal and Spatial Scales.....	137
4.2.3	Hydrologic Data Assimilation	138

4.3	The Vegetation Components: Measurement Methods.....	140
4.3.1	Interception	140
4.3.1.1	Methods of Estimation of Interception.....	141
4.3.1.2	Strengths and Weaknesses	141
4.3.2	Evapotranspiration	142
4.3.2.1	Conservation of Mass Approach.....	142
4.3.2.2	Conservation-of-Energy Approach.....	144
4.3.2.3	Plant Physiology.....	146
4.3.2.4	ET Modeling	147
4.3.2.5	Strengths and Weaknesses	147
4.3.3	Recharge and Temporal Soil Water Content Variations	148
4.4	The Remote Sensing Perspective	150
4.4.1	Relations between Spectral Measurements and Biophysical Properties	151
4.4.1.1	VIS-NIR	151
4.4.1.2	Thermal Infrared	152
4.4.1.3	Microwave	153
4.4.1.4	Strengths and Weaknesses	154
4.5	Recommendations and Future Research	155
	Notation.....	155
	References	158

Chapter 5	Field Methods for Monitoring Soil Water Status.....	167
	Rafael Muñoz-Carpena, Axel Ritter and David Bosch	
5.1	Introduction.....	168
5.2	Methods of Characterization: Trade-offs: Comparative Study	170
5.2.1	Volumetric Field Methods.....	170
5.2.1.1	Neutron Moderation.....	170
5.2.1.2	Dielectric Methods	172
5.2.1.2.1	Time Domain Reflectometry (TDR).....	173
5.2.1.2.2	Frequency Domain (FD): Capacitance and FDR	175
5.2.1.2.3	Amplitude Domain Reflectometry (ADR): Impedance.....	176
5.2.1.2.4	Phase Transmission (Virrib)	178
5.2.1.2.5	Time Domain Transmission (TDT).....	179
5.2.1.3	Other Volumetric Field Methods.....	179
5.2.2	Tensiometric Field Methods	181
5.2.2.1	Tensiometer	181
5.2.2.2	Resistance Blocks.....	182
5.2.2.2.1	Gypsum (Bouyoucos) Block.....	183

5.2.2.2	Granular Matrix Sensors (GMS)	184
5.2.2.3	Heat Dissipation.....	185
5.2.2.4	Soil Psychrometer	186
5.3	Recommendations and Future Research	188
	Acknowledgment	193
	References	193

Chapter 6 Measurement and Characterization of Soil

	Hydraulic Properties	197
	W. D. Reynolds and D. E. Elrick	
6.1	Introduction.....	198
6.2	Principles of Soil Water Flow and Parameter Definitions.....	199
6.3	Field Methods for <i>In Situ</i> Measurement of Soil Hydraulic Properties	203
6.3.1	Ring Infiltrometers	204
6.3.1.1	Ring Infiltration Theory	204
	6.3.1.1.1 Steady-State Infiltration.....	204
	6.3.1.1.2 Transient Infiltration.....	206
6.3.1.2	Single-Ring and Double-Ring Infiltrometer Methods	207
	6.3.1.2.1 Traditional Steady Flow Analyses	207
	6.3.1.2.2 Updated Steady Flow Analyses.....	208
	6.3.1.2.3 Traditional Transient Flow Analysis	210
	6.3.1.2.4 Updated Transient Flow Analyses.....	212
6.3.1.3	Twin-Ring and Multiple-Ring Infiltrometer Methods.....	213
6.3.1.4	Generalized Steady Flow Analysis for Ring Infiltrometers	215
6.3.1.5	Calculation of Matric Flux Potential, Sorptivity, and Wetting Front Pressure Head.....	216
6.3.1.6	Strengths and Weaknesses of Ring Infiltrometer Methods	216
6.3.2	Well or Borehole Permeameters.....	217
6.3.2.1	Well Permeameter Flow Theory.....	220
6.3.2.2	Original Well Permeameter Analysis	221
6.3.2.3	Updated Well Permeameter Analyses	222
	6.3.2.3.1 Improved Steady Flow Analyses.....	222
	6.3.2.3.2 Transient Flow Analyses	224
6.3.2.4	Strengths and Weaknesses of Well Permeameter Methods	226
6.3.3	Tension or Disc Infiltrometers	227
6.3.3.1	Tension Infiltrometer Flow Theory.....	228
6.3.3.2	Steady Flow — Multiple Head Tension Infiltrometer Analyses	232

6.3.3.3	Transient Flow — Single Head Tension Infiltrometer Analysis.....	236
6.3.3.4	Accounting for Contact Sand.....	238
6.3.3.5	Strengths and Weaknesses of the Tension Infiltrometer Method.....	240
6.3.4	Other Methods.....	242
6.3.4.1	Instantaneous Profile Method.....	242
6.3.4.2	Strengths and Weaknesses of the Instantaneous Profile Method.....	245
6.4	Recommendations for Further Research.....	246
6.5	Concluding Remarks.....	247
	References.....	247
Chapter 7	Unraveling Microscale Flow and Pore Geometry: NMRI and X-Ray Tomography.....	253
	Markus Deurer and Brent E. Clothier	
7.1	Introduction.....	254
7.2	Nuclear Magnetic Resonance Imaging.....	255
7.2.1	Measurement Principle: The Behavior of Spins in Magnetic Fields.....	255
7.2.2	Fourier Imaging.....	259
7.2.2.1	Pulse Sequence Design.....	259
7.2.2.2	Key Hardware Components.....	266
7.2.2.2.1	NMR Magnet.....	266
7.2.2.2.2	NMR Probe.....	267
7.2.2.2.3	Magnetic Field Gradient Coils.....	267
7.2.2.2.4	NMR Imaging Spectrometer.....	268
7.2.3	Applications of NMRI to Soil-Plant-Water Processes.....	268
7.2.4	Strengths and Weaknesses of NMR Imaging.....	271
7.2.4.1	Strengths.....	271
7.2.4.2	Weaknesses.....	271
7.3	X-Ray Computed Tomography.....	272
7.3.1	Measurement Principle: Attenuation of X-Ray Photon Energy.....	272
7.3.2	Measurement Components.....	273
7.3.3	Analysis of Measured Attenuation.....	274
7.3.3.1	Interpretation of Attenuation Coefficients.....	274
7.3.3.1.1	Homogeneous Object and Monochromatic X-Rays.....	274
7.3.3.1.2	Heterogeneous Object and Monochromatic X-Rays.....	276
7.3.3.1.3	Heterogeneous Object and Polychromatic X-Rays.....	276
7.3.3.2	Image Reconstruction.....	278

7.3.4	Applications of X-Ray Tomography to Soil-Plant-Water Processes.....	279
7.3.5	Strengths and Weaknesses of X-Ray Tomography.....	281
7.3.5.1	Strengths.....	281
7.3.5.2	Weaknesses.....	282
7.4	Use of NMRI and X-Ray Tomography for Practical Engineering Purposes.....	282
7.5	Prospects and Future Research Imperatives.....	283
7.5.1	Microscale.....	283
7.5.2	Macroscale.....	283
	References.....	284

Chapter 8 Preferential Flow: Identification and Quantification 289

Adel Shirmohammadi, H. Montas, Lars Bergström, Ali Sadeghi
and David Bosch

8.1	Introduction.....	290
8.2	Background on Preferential Flow Processes and Identification.....	291
8.3	Quantification of Preferential Flow.....	293
8.3.1	Experimental.....	293
8.3.2	Theoretical.....	295
8.3.2.1	Mechanistic, Single-Domain, Derived Stochastically (Averaging) with Deterministic Result.....	296
8.3.2.2	Empirical Single-Domain, Deterministic.....	297
8.3.2.3	Mechanistic, Bidomain and Multidomain, Deterministic.....	298
8.3.2.4	Mechanistic, Single-Domain, Stochastic.....	300
8.3.2.5	A New Three-Domain Infiltration Concept for Structured Soils.....	300
8.4	Summary and Conclusions.....	303
	References.....	304

Section III

Soil and Solutes Processes

Chapter 9 Field Methods for Monitoring Solute Transport..... 309

Markus Tuller and Mohammed R. Islam

9.1	Introduction.....	310
9.2	Direct Extraction of Soil Solution.....	310
9.2.1	Field Methods for <i>In Situ</i> Extraction of Soil Solution.....	310
9.2.1.1	Suction Cups.....	310

9.2.1.2	Combined Solution Sampling — Tensiometer Probes	314
9.2.1.3	Suction Lysimeters	316
9.2.1.4	Passive Capillary Samplers.....	317
9.2.1.5	Capillary Absorbers	319
9.2.2	Solution Extraction from Soil Samples.....	321
9.3	Indirect Field Methods for Determining Solute Concentration.....	321
9.3.1	Time Domain Reflectometry.....	321
9.3.2	Electrical Resistivity Methods	326
9.3.3	Electromagnetic Induction.....	329
9.3.4	Porous Matrix Sensors	332
9.3.5	Fiber Optic Sensors	335
9.4	Comparison of Direct and Indirect Methods	336
9.5	Case Studies and Recommendations for Future Research	337
9.5.1	Detailed Characterization of Solute Transport in a Heterogeneous Field Soil with Fiber Optic Mini Probes and Time Domain Reflectometry	337
9.5.2	Monitoring Snowmelt-Induced Unsaturated Flow and Transport Using Electrical Resistivity Tomography and Suction Samplers	342
9.5.3	Recommendations for Future Research	345
	Acknowledgments	346
	Notation.....	346
	References	347

Chapter 10 Time Domain Reflectometry as an Alternative in Solute Transport Studies..... 357

Iris Vogeler, Steve Green and Brent E. Clothier

10.1	Introduction.....	358
10.2	TDR System for Monitoring Water and Solute Transport	359
10.2.1	The Measurement System	359
10.2.2	TDR Operation	359
10.2.3	Experimental Setup for Laboratory Experiments.....	361
10.2.4	Probe Design and Placement	362
10.2.5	TDR Data Analysis	364
10.2.5.1	Soil Moisture Content.....	364
10.2.5.2	Solute Concentration.....	365
10.2.6	Calibration.....	368
10.2.6.1	Direct Calibration Approach	368
10.2.6.2	Indirect Calibration Approach.....	372
10.2.6.2.1	Pulse Application.....	372
10.2.6.2.2	Continuous Solute Application	373
10.2.7	Transport Models Linked to TDR Measurements.....	374

10.2.8	Strength and Weakness of TDR for Solute Transport Studies	376
10.3	Application of TDR for Solute Transport Studies.....	377
10.3.1	Steady-State Water Flow and Inert Solutes	377
10.3.2	Transient Flow and Inert Solutes.....	381
10.3.3	Reactive Solutes.....	382
10.4	Recommendations and Future Research	384
	Notation.....	385
	References	386

Chapter 11 Characterization of Solute Transport Through Miscible Displacement Experiments 391

J. Álvarez-Benedí, C. M. Regalado, A. Ritter and S. Bolado

11.1	Characterization of Solute Transport	392
11.2	Breakthrough Curve.....	395
11.2.1	The Miscible Displacement Experiment and Its Mathematical Description	395
11.2.1.1	Flux, Resident, and Time-Averaged Concentrations.....	397
11.2.1.1.1	Transport Equation	397
11.2.1.1.2	Flux, Averaged, and Time Resident Concentrations.....	398
11.2.1.2	Boundary Conditions.....	400
11.2.1.2.1	Inlet Boundary Conditions.....	400
11.2.1.2.2	Outlet Boundary Conditions.....	402
11.2.1.3	Tracers.....	403
11.2.2	Analysis of the Breakthrough Curve.....	404
11.2.2.1	Effect of Transport Mechanisms on the BTC	404
11.2.2.2	Moment Analysis	406
11.2.2.3	Characterizing Transport Mechanisms through Inverse Modeling	408
11.2.2.4	Application for Sorbed Solutes: Estimation of the Retardation Factor.....	410
11.2.3	Beyond BTC.....	412
11.3	Techniques for Characterizing Nonequilibrium during Solute Transport in Soils	414
11.3.1	Techniques Based on Breakthrough Curves.....	414
11.3.1.1	Effect of Variation of the Pore Water Velocity.....	416
11.3.1.2	Single and Multiple Tracers	417
11.3.1.3	Flow-Interruption Technique.....	417
11.3.2	Estimation of Nonequilibrium Parameters From Simple Experiments.....	423
11.3.2.1	Single Tracer.....	424
11.3.2.2	Sequential Tracer Technique.....	425

11.4	Recommendations and Future Research	426
	Acknowledgments	427
	References	428
Chapter 12	Methods to Determine Sorption of Pesticides and Other Organic Compounds	435
	Juan Cornejo, M ^a Carmen Hermosín, Rafael Celis and Lucía Cox	
12.1	Introduction.....	436
12.2	Sorption and Other Soil Processes	438
	12.2.1 Sorption–Leaching	439
	12.2.2 Sorption–Degradation.....	442
12.3	Characterizing Sorption–Desorption Processes	443
	12.3.1 Measuring Sorption	443
	12.3.1.1 Sorption Equilibrium.....	443
	12.3.1.2 Desorption.....	444
	12.3.1.3 Sorption Kinetics.....	446
	12.3.2 Estimating Sorption	450
	12.3.2.1 Characterizing Sorption at Field Scale.....	450
	12.3.2.2 Estimating Sorption from Easily Measurable Soil Properties	452
	12.3.2.2.1 Organic Carbon Content	452
	12.3.2.2.2 Clay Content.....	453
	12.3.2.2.3 Other Soil Properties	454
	12.3.3 Strengths and Weaknesses.....	455
12.4	Recommendations and Future Research	455
	Acknowledgment	456
	References	456
Chapter 13	Methods for Measuring Soil-Surface Gas Fluxes	465
	Philippe Rochette and Sean M. McGinn	
13.1	Introduction.....	466
13.2	Soil Mass Balance Approach	467
13.3	Chamber Techniques	468
	13.3.1 Chamber Impacts on <i>F_g</i>	468
	13.3.1.1 Soil and Air Temperature and Humidity.....	468
	13.3.1.2 Chamber Headspace Gas Concentration	469
	13.3.2 Chamber Design	470
	13.3.3 Air Sampling and Gas Concentration Analysis.....	471
	13.3.4 Chamber Types	472
	13.3.4.1 Steady-State Chambers	473
	13.3.4.1.1 Flow-Through SS Chambers.....	473
	13.3.4.1.2 Non-Flow-Through SS Chambers..	474
	13.3.4.2 Non–Steady-State Chambers	476

	13.3.4.2.1 Non-Flow-Through Chambers.....	478
	13.3.4.2.2 Flow-Through Chambers.....	479
	13.3.5 Strengths and Weaknesses of Chamber Techniques.....	479
13.4.	Mass Exchange Using Micrometeorological Techniques.....	479
	13.4.1 Aerodynamic Technique.....	480
	13.4.2 Bowen Ratio–Energy Balance Technique.....	482
	13.4.3 Eddy Covariance Technique.....	485
	13.4.4 Relaxed Eddy Accumulation Technique.....	486
	13.4.5 Combined Techniques.....	487
	13.4.6 Integrated Horizontal Flux Technique.....	487
	13.4.7 Mass Difference Technique.....	489
	13.4.8 Theoretical Profile Shape Technique.....	489
	13.4.9 Backward Lagrangian Stochastic Technique.....	491
	13.4.10 Strengths and Weaknesses of Micrometeorological Techniques.....	492
13.5	Recommendations and Future Research.....	494
	Notation.....	495
	References.....	496

Chapter 14 Chemical Methods for Soil and Water Characterization ... 503

Yuncong Li, Meifang Zhou and Jianqiang Zhao

14.1	Introduction.....	505
	14.1.1 Criteria for Method Selection.....	506
	14.1.1.1 Using Standard Methods.....	506
	14.1.1.2 Fitting to Analytical Purposes.....	507
	14.1.1.3 Meeting the Method Detection Limit.....	507
	14.1.2 Assessment of Uncertainty.....	516
14.2	Critical Discussion of Analytical Methods of Soil and Water.....	517
	14.2.1 Nitrogen.....	517
	14.2.1.1 Nitrogen in Soil and Water.....	517
	14.2.1.2 Laboratory Methods for Ammonia Determination.....	518
	14.2.1.2.1 Indophenol Blue Colorimetry.....	519
	14.2.1.2.2 Ion-Selective Electrode.....	519
	14.2.1.2.3 Distillation-Titrimetric Method....	520
	14.2.1.2.4 Nontraditional, New, or Advanced Methods.....	520
	14.2.1.3 <i>In Situ</i> Methods for Ammonia Determination .	521
	14.2.1.3.1 Field Testing Kits.....	521
	14.2.1.3.2 Field Monitoring Probes.....	521
	14.2.1.3.3 Sophisticated Instruments for Field Analysis.....	521
	14.2.1.4 Laboratory Methods for Nitrate and Nitrite Determination.....	521
	14.2.1.4.1 Griess Assay.....	522

	14.2.1.4.2	Using Copper–Cadmium	523
	14.2.1.4.3	Use of Hydrazine Sulfate	523
	14.2.1.4.4	Ion Chromatography	524
	14.2.1.4.5	UV Method	525
	14.2.1.4.6	Nitrate Electrode	525
	14.2.1.4.7	Nontraditional, New, or Advanced Methods of Capillary Electrophoresis	526
	14.2.1.4.8	Photochemical and Enzymatic Nitrate Reductions	526
	14.2.1.5	<i>In Situ</i> Methods for Nitrate Determination	527
	14.2.1.5.1	Field Testing Kits	527
	14.2.1.5.2	Field Monitoring Probes	527
	14.2.1.5.3	Sophisticated Instruments for Field Analysis	527
	14.2.1.6	Organic N Determination	527
	14.2.1.6.1	Kjeldahl Method	528
	14.2.1.6.2	Persulfate Method	528
	14.2.1.6.3	High-Temperature Combustion Method	528
	14.2.1.6.4	Nontraditional, New, or Advanced Methods	529
14.2.2		Phosphorus	529
	14.2.2.1	Phosphorus in Soil and Water	529
	14.2.2.2	Laboratory Methods for Phosphorus Determi- nation	533
	14.2.2.2.1	Colorimetry Methods	533
	14.2.2.2.2	Chromatographic Techniques	534
	14.2.2.2.3	Digestion Method	535
	14.2.2.2.4	Nontraditional, New, or Advanced Methods	536
	14.2.2.3	<i>In Situ</i> Methods for Phosphorus Determination	537
14.2.3		Metals	538
	14.2.3.1	Metals in Soil and Water	538
	14.2.3.2	Laboratory Methods for Metal Determination ..	539
	14.2.3.3	<i>In Situ</i> Method for Metal Determination	539
14.2.4		Organic Matter/Carbon	540
	14.2.4.1	Organic Carbon in Soils and Water	540
	14.2.4.2	Organic Carbon Determination	540
	14.2.4.2.1	Walkley–Black Method (Wet Oxi- dation)	541
	14.2.4.2.2	Carbon Analyzers (Dry Combus- tion)	541
	14.2.4.2.3	Loss-on-Ignition	541
14.2.5		Pesticides	543

14.2.5.1	Pesticides in Soil and Water	543
14.2.5.2	Sample Preparation	543
14.2.5.3	General Approach for Screening Pesticides in Soil and Water	544
14.2.5.4	Laboratory Methods for Pesticide Determination	545
14.2.5.4.1	Gas Chromatography	545
14.2.5.4.2	High Performance Liquid Chroma- tography	547
14.2.5.4.3	Mass Spectrometry	548

Soil and Microorganisms

Chapter 15	Evaluation and Characterization of Soil Microbiological Processes	559
	Mikael Pell and John Stenström	
15.1	Introduction	559
15.2	Basic Soil Microbiology	560
15.2.1	The Actors	561
15.2.1.1	Activity	561
15.2.1.2	Diversity	561
15.2.1.3	Biomass	562
15.2.2	Soil as a Microbial Habitat	562
15.3	Methods for Microbial Soil Characterization	564
15.3.1	Sampling and Soil Handling	564
15.3.2	Soil Respiration, Denitrification, and Nitrification	566
15.3.3	Activity	567
15.3.4	Diversity	569
15.3.5	Enumeration and Biomass	571
15.3.6	Choice of Method	573
15.4	Some Applications	575
15.4.1	Toxicity Testing	575
15.4.2	Integrated Approach	576
15.4.3	Variation	576
15.5	Recommendations and Future Research	579
15.5.1	Recommendations	579
15.5.2	Future Research	579
	References	580

Spatial Variability and Scale Issues

Chapter 16	Geostatistical Procedures for Characterizing Soil Processes .	585
	Marc Van Meirvenne, Lieven Vernailen, Ahmed Douaik, Niko E. C. Verhoest and Moira Callens	
16.1	Introduction — Why Geostatistics?	586
16.2	Geostatistics.....	587
16.2.1	Theoretical Concepts.....	587
16.2.1.1	Strict Stationarity	588
16.2.1.2	Second-Order Stationarity.....	588
16.2.1.3	Intrinsic Hypothesis	589
16.2.2	Variogram Estimation.....	589
16.2.3	Models for Variograms.....	590
16.2.4	Kriging Interpolation.....	591
16.2.4.1	Univariate Estimation of Z	591
16.2.4.2	Multivariate Estimation of Z	592
16.2.4.2.1	Limited Number of Secondary Data	592
16.2.4.2.2	Exhaustive Secondary Data	594
16.2.4.3	Strongly Skewed Distributions.....	596
16.2.4.3.1	Robust Variograms.....	596
16.2.4.3.2	Lognormal Kriging.....	597
16.2.4.4	Local Spatial Uncertainty	597
16.2.4.4.1	Indicator Kriging.....	598
16.2.4.4.2	Bayesian Maximum Entropy.....	601
16.2.4.5	Conditional Simulation.....	603
16.3	Geostatistical Sampling.....	605
16.3.1	Sampling Support.....	605
16.3.2	Number of Samples	605
16.3.3	Sampling Configuration and Sampling Goal	606
16.3.4	Method of Data Analysis	607
16.3.5	Secondary Information.....	607
16.4	Case Study: Exploring the Soil Moisture– Landscape Relationship	608
16.4.1	Introduction	608
16.4.2	Materials and Methods.....	608
16.4.3	Results.....	609
16.5	Conclusions	614
	References	614
Chapter 17	Soil Variability Assessment with Fractal Techniques.....	617
	A. N. Kravchenko and Y. A. Pachepsky	

17.1	Introduction.....	617
17.2	Fractal Models and Parameters of Spatial Variability.....	619
17.2.1	Monofractal Models.....	620
17.2.2	Multifractal Models.....	626
17.2.3	Multifractal Spectra.....	627
17.3	Simulating Spatial Variability with Fractal Models.....	632
17.4	Summary, Critical Assessment, and Future Research.....	634
	References.....	635

Chapter 18	Geospatial Measurements of Apparent Soil Electrical Conductivity for Characterizing Soil Spatial Variability.....	639
-------------------	---	-----

Dennis L. Corwin

18.1	Introduction.....	640
18.1.1	Justification for Characterizing Spatial Variability with Geospatial EC_a Measurements.....	640
18.1.2	Edaphic Factors Influencing EC_a Measurements.....	642
18.1.3	Mobile EC_a Measurement Equipment.....	644
18.2	Guidelines for Conducting an EC_a -Directed Soil Sampling Survey.....	646
18.3	Strengths and Limitations.....	647
18.4	Characterizing Spatial Variability with EC_a -Directed Soil Sampling: Case Studies.....	650
18.4.1	Landscape-Scale Solute Transport in the Vadose Zone.....	652
18.4.2	Assessing Soil Quality and Spatio-Temporal Changes in Soil Quality.....	658
18.4.3	Delineating Site-Specific Management Units for Precision Agriculture.....	660
18.5	Future Directions.....	662
	Acknowledgments.....	664
	References.....	664

Section VI

Modeling Tools

Chapter 19	Assessment of Uncertainty Associated with the Extent of Simulation Processes from Point to Catchment: Application to 1D Pesticide Leaching Models.....	673
	Marco Trevisan and Costantino Vischetti	
19.1	Introduction.....	674
19.2	Spatialization of 1D Models.....	676
19.2.1	General.....	676

19.2.2	Proposed Protocol	677
19.2.2.1	Data Collection	677
19.2.2.2	Determination of Number of Simulations.....	677
19.2.2.2.1	All Cells.....	678
19.2.2.2.2	Unique Combination Approach....	678
19.2.2.2.3	Meta-Model.....	679
19.2.2.3	Mapping.....	679
19.2.3	Uncertainty Linked to Deterministic Simulations	680
19.2.3.1	General	680
19.2.3.2	Proposed Protocol	681
19.3	Examples.....	685
19.3.1	Spatialization of 1D Models.....	685
19.3.2	Probability Analysis of Uncertainty Linked to Deterministic Simulations	687
19.4	Recommendations and Future Research	688
	References.....	690
Chapter 20	Inverse Modeling Techniques to Characterize Transport Processes in the Soil-Crop Continuum.....	693
	S. Lambot, M. Javaux, F. Hupet and M. Vanclooster	
20.1	Introduction.....	694
20.2	The Forward Model.....	695
20.2.1	Existence.....	696
20.2.2	Identifiability, Uniqueness, and Sensitivity	696
20.2.3	Model Adequacy.....	697
20.3	Objective Function	697
20.3.1	Definition	697
20.3.2	Multi-Informative Objective Functions	699
20.3.2.1	Use of Prior Information.....	700
20.3.2.2	Use of Different Sources of Information	700
20.4	Optimization Algorithms	701
20.5	Assessing the Well-Posedness of the Inverse Problem.....	703
20.5.1	Response Surface Analysis	703
20.5.2	Validity	706
20.5.3	Uncertainty Analysis	706
20.5.4	Stability analysis	707
	References	709
Chapter 21	Computer Models for Characterizing the Fate of Chemicals in Soil: Pesticide Leaching Models and Their Practical Applications.....	715
	Anna Paula Karoliina Jantunen, Marco Trevisan and Ettore Capri	

21.1	Introduction: State of The Art on the Use of Pesticide Leaching and Dissipation Models.....	716
21.1.1	Model Selection.....	717
21.1.1.1	Purpose of the Model.....	717
21.1.1.2	Processes Considered by the Model.....	718
21.1.1.3	Scale.....	718
21.1.1.3.1	Temporal Scale.....	718
21.1.1.3.2	Spatial Scale.....	718
21.1.1.4	Construction of the Model.....	719
21.1.1.5	Model Inputs.....	726
21.1.1.6	Model Outputs.....	726
21.1.1.7	User Requirements.....	727
21.1.1.8	Reliability.....	727
21.1.2	Correct Use of Models.....	728
21.1.3	Model Calibration.....	729
21.1.4	Model Validation.....	729
21.1.5	Parameterization.....	729
21.1.6	Assessing the Reliability of Modeling Results.....	730
21.2	Modeling Soil-Pesticide Interactions.....	730
21.2.1	The Environmental Fate of Pesticides Applied on Agricultural Fields.....	730
21.2.2	Modeling Strategies.....	731
21.2.2.1	Soil Properties.....	731
21.2.2.2	Soil Hydrology.....	732
21.2.2.3	Pesticide Properties.....	733
21.2.2.4	Pesticide–Soil Processes.....	734
21.3	Current Pesticide Leaching Models.....	735
21.3.1	General Structure of Mathematical Pesticide Leaching Models.....	735
21.3.2	Current Leaching Modes.....	738
21.3.3	Applications.....	739
21.3.3.1	Research.....	740
21.3.3.2	Environmental Management.....	742
21.3.3.3	Farm Management.....	743
21.3.3.4	Large-Scale Vulnerability Assessment.....	744
21.3.3.5	Pesticide Registration.....	745
21.4	Case Studies.....	747
21.4.1	Pesticides in Italian Horticulture: Potential of Groundwater Contamination and Carryover Effects.....	747
21.4.2	SuSAP Decision Support System for the Region of Lombardy, Italy.....	748
21.4.3	FOCUS.....	749
