PREFACE	vii
INTRODUCTION	xix
1. CHEMISTRY OF SOIL DEVELOPMENT, <i>Isaac Barshad</i>	1
Analyses for Evaluating Soil Development	2
Criteria for Establishing Uniformity of Patent Material	4
Total Mineralogical Analysis	5
Particle-size Distribution of Resistant Minerals	5
Ratio of Two Resistant Minerals in a One-particle-size Fraction	9
Particle-size Distribution of the Whole Nonclay Fraction of the Soil	10
Nature of Clay Distribution with Depth	10
Chemical Composition of the Nonclay Fraction	12
Calculating Changes Due to Profile Development	13
Evaluating Profile Development by Mineralogical Analysis	13
Evaluating Profile Development by Chemical Analysis	22
Factors Determining Relative Stability of Materials	29
Alteration of Minerals of the Parent Material	35
Reactions Among Products of Weathering and Between Products and Reactants	41
Formation of Clay Minerals	43
Formation of Profiles of Soil Properties	45
Plant Growth	47
Microbiological Activity	50
Animal Activity	51
Water Movement	51
Diffusion	52
Dispersion and Flocculation	52
Wetting and Drying	56
Expansion and Contraction	56
Cementation and Decementation	57
Factors of Soil Formation	58
Soil-Forming Processes	63

2. CHEMICAL COMPOSITION OF SOILS, <i>Marion L. Jackson</i>	71
Composition of the Earth's Crust.....	73
Igneous Rocks.....	74
Metamorphic Rocks.....	76
Sedimentary Rocks.....	77
Soil Minerals.....	78
Primary Minerals in Soils.....	80
Silica.....	80
Feldspars.....	81
Accessory Minerals of Soils.....	83
Carbonate and Sulfur-Bearing Minerals in Soils.....	85
Carbonates.....	85
Sulfur-bearing Minerals.....	86
Layer Silicate Minerals of Soils.....	87
Crystal Structure of Layer Silicates.....	88
Micas.....	89
Vermiculite.....	94
Montmorillonite.....	96
Attapulgite.....	98
Chlorite.....	98
Mixed-layer or Interstratified Minerals.....	100
Montmorillonite-vermiculite-chlorite Intergrades.....	101
Spacing.....	105
Kaolinite and Halloysite.....	106
Oxide Minerals in Soils.....	109
Allophane.....	109
Aluminum Oxides.....	112
Iron Oxides.....	113
Titanium Oxides.....	114
Frequency Distribution of Minerals in Soils.....	114
Soil-forming Processes.....	114
Factors Affecting Frequency Distribution of Soil Minerals.....	117
Weathering Sequence of Clay-size Minerals.....	118
Weathering Reactions.....	121
Content of Chemical Elements in Soils.....	124
Silicon.....	126
Aluminum.....	127
Iron.....	128
Titanium.....	128
Calcium.....	128
Magnesium.....	129
Potassium.....	129

Sodium.....	131
Phosphorus.....	131
Molybdenum.....	133
Nitrogen.....	133
Sulfur.....	134
Selenium.....	134
Boron.....	134
3. THE PHYSICAL CHEMISTRY OF SOILS, <i>S. J. Toth</i>	142
Nature of the Soil Colloidal Fraction.....	142
Clay Mineral Types Identified in Soil Groups.....	144
Colloidal Properties of Soil Colloids and Clay Minerals.....	146
Adsorption and Exchange of Cations.....	148
Adsorption and Exchange of Anions.....	150
Cationic Activity in Clay Minerals and Soils.....	152
Adsorption of Organic Colloidal Materials and Proteins.....	153
Colloidal Properties of Soil Organic Matter.....	154
Amphoteric Nature of Soil Colloids.....	157
Dynamic Concept of Soil Colloids.....	161
4. CATION AND ANION EXCHANGE PHENOMENA, <i>Lambert Wiklander</i>	163
Origin of Ion-Exchange Properties of Soil.....	164
Kind of Exchangeable Ions and Exchange Capacity.....	166
Structure and Properties of the Diffuse Double Layer.....	166
Ion-Exchange Formulas.....	170
Application of the Donnan Equilibrium.....	172
Derivations of Ionic Distributions.....	172
Osmotic Pressure and Membrane Potential.....	177
Relationship Between the Donnan and Gouy Treatments.....	177
Activity of Exchangeable Ions.....	178
Activity from the Donnan Equilibrium.....	180
The Membrane Electrode Method.....	181
Membrane Potential Measurements.....	181
Other Procedures.....	183
Rate of Ion Exchange.....	183
Influence of Temperature.....	185
Cation Exchange.....	185
Effect of Dilution, Exchange Capacity, and Valence.....	185
Effect of Dilution and Valence.....	186
Effect of Exchange Capacity and Valence.....	187
Implications Regarding Plant Nutrients in Soils.....	188
Influence of Mole Fraction and Complementary Ions.....	189

Theoretical Approaches	190
Influence of the Exchange Material	192
Relative Replacing Power	193
Anion Exchange	196
Negative Adsorption	197
Adsorption and Exchange of Anions	198
Salt Effects on Phosphate Sorption	202
Exchange Between Solid Phases	203
5. SOIL ORGANIC MATTER, <i>James L. Mortensen and Frank L. Himes</i>	206
Extraction	207
Proximate Analysis	207
Adsorption of Organic Matter on Clay	208
Organo-mineral Gels	209
Pretreatment	210
Aqueous Extractants	210
Hydrolysis, Oxidation, and Hydrogenation	211
Chelating Extractants	212
Extraction Difficulties	212
Separation and Fractionation	213
Removal of Clay, Salts, and Metals (168)	213
Organic Combinations	215
Precipitation	215
Chromatography	217
Electrophoresis	218
Diffusion and Sedimentation	221
Chemical Composition	221
Functional Groups	221
Spectroscopy	223
The Nitrogen Fraction	228
The Phosphorus Fraction	232
Conclusion	236
6. BIOCHEMISTRY OF SOIL, <i>I. L. Stevenson</i>	242
Microorganisms of the Soil	243
The Ecology of Microorganisms in Soil	246
Biochemical Activities of Microorganisms	248
Enzyme Activity in Soil	254
Organic Matter Transformations	256
The Carbon Cycle	259
Cellulose	260

Hemicelluloses	261
Lignins	262
Starches	263
Pectins	263
Chitin	263
The Nitrogen Cycle	264
Mineralization and Immobilization of Nitrogen	265
Nitrification	268
Denitrification	270
Nitrogen Fixation	271
Sulfur Transformations	275
Mineralization and Immobilization of Sulfur	275
Inorganic Sulfur Oxidation	277
Reduction of Inorganic Sulfur	278
Phosphorus Transformations	279
Mineralization and Immobilization of Organic Phosphorus	280
Solubilization of Inorganic Phosphorus	281
Transformation of Other Elements	282
Pesticide Transformations	284
The Occurrence of Vitamins and Antibiotics in Soil	284
Vitamins and Growth Factors	284
Antibiotics	285
General	287
7. ACID, ALKALINE, SALINE, AND SODIC SOILS, <i>Lloyd F. Seatz, and H. B. Peterson</i>	292
Acid Soils	293
Humus	293
Aluminosilicates	294
Hydrous Oxides	295
Soluble Salts	295
Nature of Soil Acidity	295
Factors Affecting pH Measurement	296
Soil:Water Ratio	296
Soluble Salts	297
Carbon Dioxide	298
Lime Requirement	299
Limestone Reaction	301
Limestone Reactivity Evaluation	302
Reasons for Liming Acid Soils	303
Calcareous Soils	304

Saline and Sodic Soils	306
Transition Processes in Salt-affected Soils	308
Evaluation and Reclamation of Saline Soils	310
Sodic Soils	311
Quality of Irrigation Waters	314
8. TRACE ELEMENTS IN SOILS, <i>Robert L. Mitchell</i>	320
Source of Trace Elements	321
Total Trace Element Content of Soils	329
Location of Trace Elements in Soils	332
Distribution in Size Fractions	332
Occurrence in Clay Minerals	336
Occurrence in Sesquioxides	337
Occurrence in Organic Complexes	340
Extraction of Trace Elements From Soils	342
Trace Element Balance in Soils	346
Distribution of Trace Elements in Soil Profiles	349
Surface Enrichment	350
Podzolic Soils	350
The Effect of Impeded Drainage	353
Mechanical Translocation	355
Comparison of Soil Types	356
Tropical Soils	358
Behavior of Biologically Important Trace Elements	360
Boron	360
Cobalt	361
Copper	361
Manganese	362
Molybdenum	363
Selenium	363
Zinc	365
Other Elements of Biological Interest	366
9. SOIL FIXATION OF PLANT NUTRIENTS, <i>Louis T. Kardos</i>	369
Phosphorus Fixation	369
Adsorption Reactions	370
Isomorphous Replacement Reactions	372
Double Decomposition Reactions	376
Organic Matter and Phosphorus Fixation	381
Summary: Phosphorus Fixation	382
Nutrient Cation Fixation	382

10. SOIL CHEMISTRY AND PLANT NUTRITION, <i>Mack Drake</i>	395
Nutrients Essential to Plants	398
Mechanism of Ion Adsorption by Plant Roots	398
Cation Movement from Nutrient Medium to Root Surface	400
Cation-exchange Properties of Plant Roots	401
Cation Bonding Energies of Root Colloids	406
Cation-exchange Capacity and Selective Adsorption of Ca and K	407
Mode of Ion Entry	410
Cations from Soil to Plant	412
Cation Activities	412
Cation-exchange Capacity and Valence Effect	413
Clay Bonding Energy and Relative K Uptake	417
Per Cent Base Saturation and Type of Colloid	417
Nitrogen Effect on Cation-exchange Capacity and Cation Uptake	420
Other Factors Influencing Calcium Availability to Plants	422
Root-soil Ionic Environment Macronutrient Cations	423
Micronutrient Cations	424
Phosphorus from Soil to Plant	424
Available Phosphorus and Development of Plant Seedlings	425
Nitrogen Stimulation of Plant Uptake of Fertilizer Phosphorus	427
Root Development Within the Band of Phosphate Fertilizer	428
Effect of Lime on Phosphorus Availability	429
Anion Solubilization of Soil Phosphates	430
Organic Anions Prevent Fixation and Release Fixed Phosphorus	431
Chelation and Plant Nutrition	432
Role of Chelates in Solubility of Phosphates	432
Solubilization of Rock Phosphate by Calcium Chelation	433
Chelation of Iron and Other Metals	435
Plant Tissue Analysis—A Diagnostic Tool	438
Practical Applications	439
11. RADIOISOTOPES AND SOILS, <i>E. R. Graham</i>	445
The Radioactive Series	449
Radioactive Potassium	450
Variations in the Earth's Natural Radioactivity	450
Radioactive Elements of the Biosphere	453
Radioactive Nuclides Deposited on Soil by Fallout	454
Use of Radioactive Isotopes in Soil Research and Soil Testing	459
Study of Fertility Levels of Soil Phosphorus by Tracer Techniques	459
Factors Affecting the α and γ Values of Soils	460

Measured Activity Compared with Standards of Concentration . . .	466
Ion-exchange Equilibria in Terms of Ion Selectivity	467
12. METHODS FOR CHEMICAL ANALYSIS OF SOILS, <i>William J. Hanna</i> . . .	474
Analyses for Total Content of Major Constituents	475
Moisture	475
Organic Matter	475
Loss on Ignition	475
Chromic Acid Digestion	476
Nitrogen	477
Sulfur	477
Chlorine	478
Potassium and Sodium	478
Sodium Carbonate Fusion for Al, Fe, Ca, Mg, Mn, P, Si, and Ti . . .	479
Silicon	480
Mixed Oxides of Aluminum, Iron, Phosphorus, and Titanium . . .	480
Iron	481
Titanium	481
Phosphorus	481
Calcium	482
Magnesium	483
Manganese	483
Aluminum	483
Analyses for Total Content of Trace Elements	484
Colorimetry	484
Cobalt	484
Copper	486
Molybdenum	487
Zinc	488
Boron	490
Emission Spectrographic Analysis	492
Preparation of Sample	492
Determination of Elements by NaNO_3 Buffer Method	492
Determination of Elements by Preconcentration in $\text{Al}_2\text{O}_3\text{-Fe}_2\text{O}_3$. . .	493
Special Extraction Procedures	493
Trace Elements Extracted with 2.5 Per Cent Acetic Acid	493
Hot-water-soluble Boron	493
Easily Reducible Manganese	494
Rapid Chemical Tests for Nutrients in Electrodialysis	
Extracts	495
Phosphorus	495

Potassium and Sodium.....	495
Magnesium.....	496
NO ₃ -nitrogen.....	496
NH ₄ -nitrogen.....	497
Cation-exchange Properties.....	497
Cation-exchange Capacity.....	497
Exchangeable Cations.....	498
Total Exchangeable Bases.....	498
Sodium and Potassium.....	499
Manganese.....	499
Calcium.....	499
Magnesium.....	500
Other Special Properties.....	500
pH.....	500
Lime Requirement.....	500
Salt Concentration—Conductivity Test.....	501
INDEX.....	503
