

Contents

1 A Brief Review	1
1 Number Fields	1
2 Completions of Number Fields.....	8
3 Some General Questions Motivating Class Field Theory	14
2 Dirichlet's Theorem on Primes in Arithmetic Progressions	17
1 Characters of Finite Abelian Groups	17
2 Dirichlet Characters	20
3 Dirichlet Series	30
4 Dirichlet's Theorem on Primes in Arithmetic Progressions	35
5 Dirichlet Density	40
3 Ray Class Groups	45
1 The Approximation Theorem and Infinite Primes	45
2 Ray Class Groups and the Universal Norm Index Inequality	47
3 The Main Theorems of Class Field Theory	60
4 The Idèlic Theory	63
1 Places of a Number Field	64
2 A Little Topology	66
3 The Group of Idèles of a Number Field.....	68
4 Cohomology of Finite Cyclic Groups and the Herbrand Quotient	75
5 Cyclic Galois Action on Idèles	83
5 Artin Reciprocity	105
1 The Conductor of an Abelian Extension of Number Fields and the Artin Symbol.....	105
2 Artin Reciprocity	111
3 An Example: Quadratic Reciprocity	128
4 Some Preliminary Results about the Artin Map on Local Fields	130

6	The Existence Theorem, Consequences and Applications	135
1	The Ordering Theorem and the Reduction Lemma	136
2	Kummer n -extensions and the Proof of the Existence Theorem	139
3	The Artin Map on Local Fields	148
4	The Hilbert Class Field	153
5	Arbitrary Finite Extensions of Number Fields	159
6	Infinite Extensions and an Alternate Proof of the Existence Theorem	162
7	An Example: Cyclotomic Fields	168
7	Local Class Field Theory	181
1	Some Preliminary Facts About Local Fields	182
2	A Fundamental Exact Sequence	186
3	Local Units Modulo Norms	191
4	One-Dimensional Formal Group Laws	195
5	The Formal Group Laws of Lubin and Tate	198
6	Lubin–Tate Extensions	201
7	The Local Artin Map	210
