Chapter 1.	Introduction	1
Chapter 2.	General comments on references	5
Chapter 3.	Examples of basic arithmetic groups	7
3.1.	\mathbb{Z} as a discrete subgroup of \mathbb{R}	7
3.1.1.	Poisson summation formula	8
3.1.2.	Riemann zeta function	8
3.2.	\mathbb{Z}^n and lattices in \mathbb{R}^n	9
3.2.1.	Lattices in \mathbb{R}^n	10
3.2.2.	Sphere packing	11
3.2.3.	Poisson summation formula for lattices in \mathbb{R}^n	12
3.2.4.	Weil-Siegel formula	13
3.2.5.	Voronoi formula	13
3.2.6.	Generalizations of the Poisson summation formula	14
3.3.	The modular group $SL(2, \mathbb{Z})$	15
3.3.1.	Fundamental domain of $SL(2, \mathbb{Z})$ in the upper half plane	15
3.3.2.	Reduced quadratic forms and reduction theory	16
3.3.3.	Generators of $SL(2, \mathbb{Z})$	17
3.3.4.	Volume formula for modular curves and locally symmetric spaces	17
3.3.5.	Moduli space of lattices	17
3.3.6.	Compactifications	18
3.3.7.	Deformation retraction to co-compact subspaces	19
3.3.8.	Geodesic flow, continued fractions and symbolic dynamics	19
3.3.9.	Congruence subgroups	20
3.3.10.	Dirichlet fundamental domain	21
3.3.11.	Finite generation of discrete groups	22
3.3.12.	Arithmetic Fuchsian groups	23
3.3.13.	Characterization of arithmetic Fuchsian groups	23
3.4.	Spectral theory of $\Gamma \backslash \mathbb{H}$	24
3.4.1.	Weyl law	25
3.4.2.	Spectral decomposition	25
3.4.3.	Discrete spectrum and Selberg's $\frac{1}{4}$ -conjecture	26
3.4.4.	Selberg trace formula	27

3.4.5.	Generalized Weyl law	28
3.4.6.	Phillips-Sarnak conjecture on cusp Mass forms and spectral degeneration	28
3.4.7.	Counting lengths of geodesics—the generalized prime number theorem	29
3.4.8.	Modular symbols	30
3.4.9.	Selberg zeta function	31
3.4.10.	Scattering geodesics and generalized Poisson relation	32
3.4.11.	Modular forms and Maass forms	33
3.4.12.	Automorphic representations	34
3.4.13.	L -functions	35
3.4.14.	Automorphic forms on adèle groups	35
3.4.15.	Converse theorems for L -functions	36
3.4.16.	Applications of modular forms	36
Chapter 4. General arithmetic subgroups and locally symmetric spaces		37
4.1.	Algebraic groups	37
4.2.	Definition of arithmetic subgroups	38
4.3.	Hilbert modular groups	39
4.4.	Congruence subgroups and the congruence kernel	40
4.5.	Arithmetic subgroups as discrete subgroups of Lie groups	41
4.6.	Zariski density of arithmetic subgroups	42
4.7.	Symmetric spaces	43
4.8.	Non-Riemannian symmetric spaces	45
4.9.	Locally symmetric spaces	45
4.10.	Space forms	46
4.11.	Compactness criterion for locally symmetric spaces	47
4.12.	Siegel sets and fundamental sets	48
4.13.	Reduction theory for arithmetic subgroups	49
4.14.	Precise reduction theory for arithmetic subgroups	50
4.15.	Metric properties and \mathbb{Q} -rank of locally symmetric spaces	51
4.16.	Volume spectrum of locally symmetric spaces	52
4.17.	Maximal arithmetic subgroups and automorphism groups	53
4.18.	Counting of volumes of hyperbolic manifolds	54
4.19.	Counting of subgroups by index	54
Chapter 5. Discrete subgroups of Lie groups and arithmeticity of lattices in Lie groups		57
5.1.	Crystallographic groups and Auslander conjecture	57
5.2.	Lattices in nilpotent Lie groups and Margulis Lemma	58
5.3.	Lattices in solvable Lie groups	60
5.4.	Lattices in semisimple Lie groups	61
5.5.	Characterization of arithmetic groups	62
5.6.	Non-arithmeticity of lattices in rank 1 cases	63

5.7.	Arithmeticity of lattices in rank 1 cases	63
5.8.	Linear discrete subgroups and Tits alternative	64
5.9.	Reflection groups	65
5.10.	Discrete groups related to Kac-Moody groups and algebras	65
5.11.	Infinite dimensional Lie groups and discrete groups associated with them	66
Chapter 6.	Different completions of \mathbb{Q} and S -arithmetic groups over number fields	69
6.1.	p -adic completions	69
6.2.	S -integers	69
6.3.	S -arithmetic subgroups	70
6.4.	S -arithmetic subgroups as discrete subgroups of Lie groups	70
Chapter 7.	Global fields and S -arithmetic groups over function fields	73
7.1.	Function fields	73
7.2.	Global fields	73
7.3.	S -arithmetic subgroups over function fields	74
Chapter 8.	Finiteness properties of arithmetic and S -arithmetic groups	75
8.1.	Finite generation	75
8.2.	Bounded generation	76
8.3.	Finite presentations	77
8.4.	Finiteness properties such as FP_∞	77
8.5.	Cofinite universal space for proper actions and arithmetic groups	78
8.6.	Finiteness properties of arithmetic subgroups	79
Chapter 9.	Symmetric spaces, Bruhat-Tits buildings and their arithmetic quotients	81
9.1.	Flats in symmetric spaces and the spherical Tits building	81
9.2.	Bruhat-Tits buildings	83
9.3.	Action of S -arithmetic subgroups on products of symmetric spaces and buildings	83
9.4.	CAT(0)-spaces and CAT(0)-groups	84
9.5.	Reduction theory for S -arithmetic subgroups	85
Chapter 10.	Compactifications of locally symmetric spaces	87
10.1.	Why locally symmetric spaces are often noncompact	87
10.2.	Compactifications of symmetric spaces	87
10.3.	Limit sets of Kleinian groups and Patterson-Sullivan theory	89
10.4.	Compactifications of locally symmetric spaces	91
10.5.	Compactifications of Bruhat-Tits buildings	92

10.6.	Compactifications for S -arithmetic groups	93
10.7.	Geometry and topology of compactifications	94
10.8.	Truncation of locally symmetric spaces	94
Chapter 11.	Rigidity of locally symmetric spaces	97
11.1.	As special Riemannian manifolds	98
11.2.	Local and infinitesimal rigidity of locally symmetric spaces	98
11.3.	Global (strong) rigidity of locally symmetric spaces	99
11.4.	Super-rigidity of lattices	99
11.5.	Quasi-isometry rigidities of lattices	100
11.6.	Rank rigidity of locally symmetric spaces	102
11.7.	Entropy rigidity of locally symmetric spaces and simplicial volume	102
11.8.	Rigidity of Hermitian locally symmetric spaces	103
11.9.	Rigidity of pseudo-Riemannian locally symmetric spaces	105
11.10.	Rigidity of non-linear actions of lattices: Zimmer program	106
11.11.	Rigidity in von Neumann algebras	109
11.12.	Topological rigidity and the Borel conjecture	111
11.13.	Methods to prove the rigidities	112
11.14.	Dynamics, flows on locally symmetric spaces and number theory	113
Chapter 12.	Automorphic forms and automorphic representations for general arithmetic groups	115
12.1.	Automorphic forms	115
12.2.	Boundary values of eigenfunctions and automorphic forms	116
12.3.	Spectral decomposition	117
12.4.	Weyl law	118
12.5.	Counting of eigenvalues for a tower of spaces	118
12.6.	Quantum chaos	119
12.7.	Arthur-Selberg trace formula	120
12.8.	Selberg zeta function	121
12.9.	Counting of lengths of geodesics and volumes of tori	122
12.10.	L -functions of automorphic representations	122
12.11.	Meromorphic continuation of Eisenstein series	123
12.12.	Constant term of Eisenstein series	124
12.13.	Langlands program	124
12.14.	Spectral theory over function fields: an example	125
Chapter 13.	Cohomology of arithmetic groups	127
13.1.	Cohomology groups	127
13.2.	L^2 - and L^p -cohomology of arithmetic groups	128
13.3.	Intersection cohomology	129
13.4.	Weighted cohomology	129

13.5.	Continuous cohomology	130
13.6.	Applications of automorphic forms to cohomology	130
13.7.	Construction of cycles and relations to automorphic forms	131
13.8.	Hecke trace formula on the cohomology groups	131
13.9.	Euler characteristics, Gauss-Bonnet formula	131
13.10.	Cohomology of \mathcal{S} -arithmetic subgroups	133
13.11.	Boundary cohomology	133
Chapter 14.	K -groups of rings of integers and K -groups of group rings	135
14.1.	Definitions of algebraic K -groups	135
14.2.	Finite generation of $K^i(\mathbb{Z})$	135
14.3.	Relations between $K^i(\mathbb{Z})$ and cohomology of the arithmetic groups $SL(n, \mathbb{Z})$	136
14.4.	Torsion elements of $K^i(\mathbb{Z})$	136
14.5.	Applications of $K_i(\mathbb{Z}[\Gamma])$ in topology	137
14.6.	Farrell-Jones conjecture, Borel conjecture and Novikov conjecture	137
Chapter 15.	Locally homogeneous manifolds and period domains	139
15.1.	Homogeneous manifolds as special Riemannian manifolds	139
15.2.	Non-symmetric, but homogeneous spaces	140
15.3.	Hodge structures, period domains and period maps	141
15.4.	Homogeneous, non-Riemannian manifolds	142
15.5.	Clifford–Klein forms of homogeneous spaces	143
15.6.	Space forms: non-Riemannian case	144
15.7.	Counting lattice points on homogeneous varieties	145
Chapter 16.	Non-cofinite discrete groups, geometrically finite groups	147
16.1.	Geometrically finiteness conditions	147
16.2.	Applications in low dimensional topology	147
16.3.	Spectral theory of geometrically finite groups	149
Chapter 17.	Large scale geometry of discrete groups	151
17.1.	Word metric on discrete groups and growth of groups	151
17.2.	Geometric group theory and property (T)	151
17.3.	Ends of groups	152
17.4.	Ends of locally symmetric spaces and bottom of the spectrum	154
17.5.	Asymptotic invariants	157
17.6.	L^2 -invariants	158
17.7.	Boundaries of discrete groups	159
17.8.	Asymptotic geometry of locally symmetric spaces $\Gamma \backslash X$	161

17.9.	Isoperimetric profile, Dehn functions of arithmetic subgroups	162
17.10.	Trees and applications in topology	163
Chapter 18.	Tree lattices	165
18.1.	Structures of tree lattices	165
18.2.	Arithmeticity and density of commensurability groups of tree lattices	166
18.3.	Rigidity of lattices in products of trees and CAT(0) groups	167
18.4.	Building lattices and applications to fake projective planes	167
Chapter 19.	Hyperbolic groups	169
19.1.	Basic properties of hyperbolic groups	169
19.2.	Rips complex and Gromov boundary	170
Chapter 20.	Mapping class groups and outer automorphism groups of free groups	173
20.1.	Mapping class groups	173
20.2.	Teichmüller spaces of Riemann surfaces	174
20.3.	Topology of moduli spaces of Riemann surfaces and the mapping class groups	175
20.4.	Compactifications of Teichmüller spaces	176
20.5.	Symmetry of Teichmüller spaces	178
Chapter 21.	Outer automorphism group of free groups and the outer spaces	179
21.1.	Outer automorphism group of free groups	179
21.2.	Outer spaces	179
21.3.	Compactifications of outer spaces	180
21.4.	Outer automorphism group of non-free groups	181
