

# Contents

Chapter 1	Introduction . . . . .	1
1.1	Definitions and Historical . . . . .	1
1.2	The Root Environment . . . . .	4
1.3	Significance and Purpose of Rhizosphere Investigations . . . . .	6
Chapter 2	The Structure and Function of Roots . . . . .	9
2.1	Introduction . . . . .	9
2.2	Root Morphology . . . . .	10
2.3	Root Structure . . . . .	13
2.3.1	Organization of the Apical Region . . . . .	13
2.3.2	The Subapical Region of the Root . . . . .	17
2.3.3	The Tissues of the Root . . . . .	21
2.3.4	Lateral Root Formation . . . . .	27
2.3.5	Secondary Growth of Roots . . . . .	27
2.4	Root Physiology . . . . .	30
2.4.1	Plants and Water . . . . .	30
2.4.2	Plant Cell–Water Relations . . . . .	31
2.4.3	Movement of Water Through the Plant . . . . .	38
2.4.4	Movement of Water from Soil to the Root Xylem . . . . .	45
2.5	The Root–Soil Boundary . . . . .	49
2.6	Root Exudation . . . . .	52
Chapter 3	Root Exudates . . . . .	55
3.1	Introduction . . . . .	55
3.2	Methods of Collection and Analysis . . . . .	56
3.3	Qualitative and Quantitative Nature of Exudates . . . . .	72
3.3.1	Carbohydrates and Amino Acids . . . . .	72
3.3.2	Organic Acids and Lipids . . . . .	74
3.3.3	Growth Factors . . . . .	75
3.3.4	Enzymes . . . . .	75
3.3.5	Miscellaneous Compounds . . . . .	76
3.4	Sites of Exudate Release . . . . .	77
3.5	Factors Affecting Exudation . . . . .	79
3.5.1	Plant Species and Developmental Stage . . . . .	79
3.5.2	Temperature and Light . . . . .	81

3.5.3 Soil Moisture and Atmosphere . . . . .	82
3.5.4 Plant Nutrition . . . . .	84
3.5.5 Plant-Injury Factors . . . . .	85
3.5.6 Microbial Effects . . . . .	87
3.5.7 Foliar Sprays . . . . .	90
3.6 Sloughed Organic Matter . . . . .	91
Chapter 4 Rhizosphere Populations . . . . .	93
4.1 Introduction . . . . .	93
4.2 Isolation and Enumeration of Microorganisms . . . . .	94
4.2.1 The Microflora . . . . .	94
4.2.2 The Fauna . . . . .	99
4.3 Populations of the Microflora . . . . .	102
4.3.1 Bacteria . . . . .	102
4.3.2 Actinomycetes . . . . .	104
4.3.3 Fungi . . . . .	104
4.3.4 Algae . . . . .	105
4.4 Qualitative Changes in the Microflora . . . . .	106
4.4.1 The Bacterial Flora . . . . .	106
4.4.2 The Fungal Flora . . . . .	110
4.5 Factors Affecting Populations of the Microflora . . . . .	113
4.5.1 Plant Type, Developmental Stage, and Vigor . . . . .	113
4.5.2 Soil Type . . . . .	115
4.5.3 Soil Treatment . . . . .	117
4.5.4 Foliar Treatments . . . . .	121
4.5.5 Environmental Factors . . . . .	124
4.5.6 Microbial Interrelationships . . . . .	129
4.6 Populations of the Rhizosphere Fauna . . . . .	131
4.6.1 Protozoa . . . . .	132
4.6.2 Nematodes . . . . .	133
4.6.3 The Acari and Collembola . . . . .	136
Chapter 5 Microbial Interactions . . . . .	140
5.1 Introduction . . . . .	140
5.2 Growth-Promoting Interactions . . . . .	141
5.2.1 Commensalistic Relationships . . . . .	141
5.2.2 Mutualistic Relationships . . . . .	146
5.3 Growth-Inhibiting Relationships (Antagonism) . . . . .	147
5.3.1 Competition in the Rhizosphere . . . . .	148
5.3.2 Antibiosis and Microbial Stasis . . . . .	153
5.3.3 Parasitism and Predation . . . . .	160

<b>Chapter 6 Rhizosphere in Relation to Plant Nutrition and Growth . . . . .</b>	<b>167</b>
6.1 Introduction . . . . .	167
6.2 Nutrient Availability and Uptake . . . . .	168
6.2.1 Mineralization from Organic Sources . . . . .	168
6.2.2 Phosphate Availability and Absorption by Plants . . . . .	170
6.2.3 Availability and Uptake of Other Elements . . . . .	174
6.2.4 Microorganism Effects on Root Morphology . . . . .	176
6.2.5 Fauna Influence on Nutrient Uptake . . . . .	176
6.3 Nonsymbiotic Nitrogen Fixation . . . . .	178
6.4 Symbiotic Relationships . . . . .	180
6.4.1 Legume–Rhizobium Interactions . . . . .	180
6.4.2 Rhizosphere Effect on Mycorrhizae . . . . .	182
6.5 Microbial Metabolites . . . . .	185
6.5.1 Growth-Promoting Factors . . . . .	185
6.5.2 Growth Inhibition . . . . .	186
6.6 Plant Effects on Other Plants . . . . .	187
6.6.1 Growth Stimulation . . . . .	188
6.6.2 Allelopathy . . . . .	189
<b>Chapter 7 Rhizosphere Relation to Plant Disease . . . . .</b>	<b>191</b>
7.1 Introduction . . . . .	191
7.1.1 General Ecology . . . . .	191
7.1.2 Inoculum Potential . . . . .	195
7.2 Pathogen Populations . . . . .	196
7.2.1 Bacteria and Fungi . . . . .	197
7.2.2 Nematode Populations . . . . .	201
7.3 Growth and Survival in the Rhizosphere . . . . .	202
7.3.1 Bacteria . . . . .	202
7.3.2 Host-Dependent Fungal Pathogens . . . . .	203
7.3.3 Fungal Pathogens with High Saprophytic Ability . . . . .	205
7.4 Pathogenesis . . . . .	206
7.4.1 Fungal Pathogens . . . . .	206
7.4.2 Nematode Activity . . . . .	209
7.4.3 Rhizosphere Factors Influencing Disease Resistance . . . . .	210
7.5 Pathogenesis Without Parasitism . . . . .	214
7.6 Disease Control . . . . .	215
7.6.1 Use of Pesticides . . . . .	215
7.6.2 Biological Control of Bacterial and Fungal Pathogens . . . . .	216

7.6.3 Role of the Microflora in Nematode Control . . . . .	226
7.6.4 Role of the Soil Fauna in Biological Control . . . . .	228
7.6.5 Host Resistance . . . . .	230
<b>Chapter 8 Current Trends and Projected Emphasis . . . . .</b>	<b>235</b>
8.1 General Overview . . . . .	235
8.2 Status of the Technology . . . . .	236
8.3 Relating to Plant Growth . . . . .	239
8.3.1 Challenge of Symbiosis . . . . .	239
8.3.2 Interactions in Symbiosis . . . . .	242
8.3.3 Nonsymbiotic Activities Reexamined . . . . .	243
8.3.4 The Root–Shoot Relationship . . . . .	244
8.4 Opportunities in Plant Pathology . . . . .	245
8.4.1 Modeling the Rhizosphere . . . . .	245
8.4.2 New Challenges in Biological Control . . . . .	247
8.5 Focus: The Rhizosphere and Crop Production . . . . .	251
References . . . . .	252
Subject Index . . . . .	281
