Preface *XV*
About the Editors *XVII*
List of Contributors *XIX*

Part I **Fluid Dynamics in Microchannels** *1*

1 **Multiphase Flow** *3*
Axel Günther and Michiel T. Kreutzer
1.1 Introduction *3*
1.2 Fundamentals of Multiphase Flow *4*
1.2.1 Properties of Fluids and Interfaces *5*
1.2.1.1 Microchannel Surface Characteristics and Wetting *6*
1.2.1.2 Scaling of Forces *7*
1.2.1.3 Surface Tension Variations *8*
1.2.1.4 Particles and Fluid Interfaces *8*
1.2.2 Classification of Phase Distributions *9*
1.3 Dynamic Behavior of Multiphase Microflows *9*
1.3.1 Flow Instabilities *10*
1.3.1.1 Capillary Instability *10*
1.3.1.2 Deformation of Stratified Liquid Layers *12*
1.3.2 Multiphase Flow Regimes *12*
1.3.3 Formation of Multiphase Flow *15*
1.3.4 Susceptibility of Multiphase Flow to Pressure Fluctuations *15*
1.3.5 Separation of Phases *16*
1.4 Role of Channel Geometries *17*
1.5 Experimental and Numerical Techniques *20*
1.5.1 Numerical *20*
1.5.2 Experimental *20*
1.5.2.1 Brightfield Microscopy *21*
1.5.2.2 Fluorescence Microscopy *21*
1.5.2.3 Particle Tracking and Particle Image Velocimetry *23*

Micro Process Engineering, Vol.1: Fundamentals, Operations and Catalysts
Edited by V. Hessel, A. Renken, J.C. Schouten, and J.-I. Yoshida
Copyright © 2009 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
ISBN: 978-3-527-31550-5

1.5.2.4 Confocal Microscopy *24*
1.5.2.5 Flow Sensors *24*
1.5.2.6 Magnetic Resonance Imaging *24*
1.5.2.7 X-ray Tomography *25*
1.6 Annular and Stratified Two-phase Flows *25*
1.7 Droplet and Bubble Flows *26*
1.7.1 Lubrication Analysis *26*
1.7.2 Pressure Drop in Segmented-flow Microfluidic Networks *28*
1.8 Practical Aspects of Microfluidic Networks *28*
1.8.1 Parallel Scaling *28*
1.8.2 Using Multiphase Flows for Controlling Fluid Paths *30*
References *32*

2 Microfluidic Networks *41*
Norbert Kockmann
2.1 Introduction *41*
2.2 Fluid Mechanics *41*
2.3 Basic Channel Structures *44*
2.4 Network Design *46*
2.5 Lumped Element Modeling *48*
2.6 Parallel Channel Devices *52*
2.7 Headers and Manifold for Plate Stacks *54*
2.8 Conclusion *56*
References *58*

3 Boiling and Two-phase Flow in Microchannels *61*
John R. Thome and Gherhardt Ribatski
3.1 Introduction *61*
3.2 Macro-to-Microscale Transition *62*
3.3 Flow Patterns in Microscale Channels *63*
3.4 Pressure Drop *66*
3.5 Boiling Heat Transfer *67*
3.6 Critical Heat Flux *70*
3.7 Two-phase Flow Instabilities *72*
3.8 Prediction Methods *76*
3.8.1 Frictional Pressure Drop *76*
3.8.2 Heat Transfer *78*
3.8.3 Critical Heat Flux *82*
References *87*

4 Microscale Flow Visualization *93*
Marko Hoffmann, Michael Schlüter, and Norbert Räbiger
4.1 Introduction *93*
4.2 Fundamentals *94*
4.3 Visualization of Flow Fields in Micro- and Minichannels *95*

4.3.1 Microparticle Image Velocimetry (μ-PIV) *95*
4.3.1.1 Correlation Averaging Method *96*
4.3.1.2 3D Reconstruction *98*
4.3.1.3 Accuracy of μ-PIV Measurements *99*
4.3.1.4 Depth of Correlation *100*
4.3.1.5 Brownian Motion *101*
4.3.2 Extension of Common μ-PIV for Enhancement of Spatial and Temporal Resolution *102*
4.3.2.1 Multiphase Flow *102*
4.3.3 Confocal Microparticle Image Velocimetry *103*
4.3.4 Stereoscopic Microparticle Image Velocimetry *104*
4.3.5 3D Particle Tracking Velocimetry *105*
4.4 Visualization of Concentration and Temperature Fields in Micro- and Minichannels *106*
4.4.1 Analysis of Concentration Fields *107*
4.4.2 Analysis of Temperature Fields *109*
4.4.3 Visualization of Mixing Processes Without Chemical Reactions *110*
4.4.4 Visualization of Reactive Mixing *110*
4.5 Conclusion *113*
References *113*

5 Modeling of Microfluidic Devices *117*
David F. Fletcher, Brian S. Haynes, Joëlle Aubin, and Catherine Xuereb
5.1 Introduction *117*
5.2 Characteristics of Microsystems *117*
5.2.1 Non-continuum Effects *118*
5.2.2 Laminar Flow *118*
5.2.3 Surface Roughness *119*
5.2.4 Viscous Energy Dissipation *120*
5.2.5 Gravitational Effects *120*
5.2.6 Electric Effects *121*
5.2.7 Surface Tension Effects *122*
5.2.8 Wall Slip Effects *123*
5.3 The Importance of Appropriate Solution Methods *124*
5.3.1 Conventional Navier–Stokes Solvers *124*
5.3.1.1 Numerical Diffusion *124*
5.3.1.2 Interfacial Surface Location and Parasitic Currents *125*
5.3.1.3 Heat Transfer Simulations *126*
5.3.2 Advanced Solution Methods *126*
5.4 Single-phase Simulations *127*
5.4.1 Heat Transfer Enhancement *127*
5.4.2 Mixing *129*
5.4.3 Modeling of Mass Transfer and Chemical Reaction *133*
5.5 Multi-phase Simulations *134*
5.5.1 Taylor Bubble Simulations *134*

5.5.2 Droplet Simulations *136*
5.6 Summary and Perspective *138*
References *139*

Part II Mixing in Microsystems *145*

6 Characterization of Mixing and Segregation in Homogeneous Flow Systems *147*
Laurent Falk and Jean-Marc Commenge
6.1 Introduction *147*
6.2 Mixing Principles and Features of Microsystems *148*
6.2.1 Molecular Diffusion *149*
6.2.2 Mixing in a Shear Field *150*
6.2.3 Application to Mixing in Microchannels *151*
6.2.4 Chaotic Mixers *154*
6.2.4.1 Additional Readings: Chaotic Mixing Model in Microchannels *156*
6.2.5 Mixing Efficiency *158*
6.3 Experimental Mixing Characterization *159*
6.3.1 Physical Methods *159*
6.3.2 Chemical Methods *161*
6.3.3 Villermaux–Dushman Reaction *162*
6.3.4 Mixing Time *165*
6.4 Comparison of Performances of Micromixers *166*
6.5 Conclusions *170*
References *170*

7 Passive and Active Micromixers *175*
Zhigang Wu and Nam-Trung Nguyen
7.1 Introduction *175*
7.2 Passive Micromixers *177*
7.2.1 Parallel Lamination Micromixers *177*
7.2.2 Serial Lamination Micromixers *183*
7.2.3 Micromixers Based on Chaotic Advection *184*
7.2.3.1 Chaotic Advection at High Reynolds Numbers *184*
7.2.3.2 Chaotic Advection at Intermediate Reynolds Numbers *185*
7.2.3.3 Chaotic Advection at Low Reynolds Numbers *186*
7.2.4 Droplet Micromixers *188*
7.3 Active Micromixers *190*
7.3.1 Pressure-induced Disturbance *190*
7.3.2 Electrohydrodynamic Disturbance *191*
7.3.3 Magnetohydrodynamic Disturbance *192*
7.3.4 Acoustic Disturbance *192*
7.3.5 Thermal Disturbance *193*
7.4 Fabrication Methods *194*

7.5 Conclusion *195*
References *197*

8 Mixing and Contacting of Heterogeneous Systems *205*
Asterios Gavriilidis and Panagiota Angeli
8.1 Gas–Liquid Systems *207*
8.1.1 Segmented Flow Contactors *208*
8.1.1.1 Bubble Formation and Length *209*
8.1.1.2 Hydrodynamics *210*
8.1.1.3 Bubble Shape and Film Thickness *210*
8.1.1.4 Pressure Drop *211*
8.1.1.5 Mixing and Mass Transfer *212*
8.1.1.6 Phase Separation *213*
8.1.1.7 Multichannel Systems *214*
8.1.2 Packed Microchannel Contactors *214*
8.1.3 Foam and Bubble Suspension Microcontactors *216*
8.1.3.1 T-type Mixing Section Geometries *216*
8.1.3.2 Flow Focusing Mixing Section Geometries *217*
8.1.3.3 Multichannel Systems *220*
8.1.3.4 Dispersion Effects *220*
8.1.4 Overlapping Microchannel and Micromesh Contactors *221*
8.1.5 Falling Film Microchannel Contactor *223*
8.2 Non-miscible Liquid–Liquid Systems *226*
8.2.1 Segmented Flow Contactors *228*
8.2.1.1 Slug/Plug Formation *228*
8.2.1.2 Hydrodynamics and Mixing *230*
8.2.1.3 Pressure Drop *230*
8.2.2 Liquid–Liquid Dispersion Microcontactors *231*
8.2.2.1 T-type and Co-flow Mixing Section Geometries *231*
8.2.2.2 Flow Focusing Geometries *234*
8.2.2.3 Multichannel Systems *235*
8.2.3 Overlapping Microchannel and Micromesh Contactors *240*
References *243*

Part III Heat/Mass Transfer *253*

9 Heat Transfer in Homogeneous Systems *255*
Franz Trachsel and Philipp Rudolf von Rohr
9.1 Introduction *255*
9.2 Continuum Assumption *256*
9.2.1 Gases *257*
9.2.2 Liquids *257*
9.3 Heat Transfer in Homogeneous Microfluidic Systems *259*
9.4 Pronounced Effects in Microchannel Heat Transfer *261*

9.4.1 Axial Heat Conduction in the Fluid *261*
9.4.2 Conjugate Heat Transfer *265*
9.4.3 Surface Roughness *266*
9.4.4 Viscous Dissipation *267*
9.4.5 Variation of Thermophysical Properties *268*
9.4.6 Electric Double Layer *269*
9.4.7 Entrance Region *269*
9.4.8 Measurement Accuracy *270*
9.5 Conventional Heat Transfer Correlations for Macroscale Tubes and Channels *270*
9.5.1 Developing Hydrodynamic Regions of Laminar Flow *271*
9.5.2 Developing Thermal Flow *271*
9.5.3 Fully Developed Laminar Flow *271*
9.5.3.1 Constant Wall Temperature *271*
9.5.3.2 Constant Heat Flux *272*
9.5.4 Turbulent Flow *272*
9.5.4.1 Transition Regime $2300 < Re < 10^4$ *274*
9.6 Conclusion *274*
References *279*

10 Transport Phenomena in Microscale Reacting Flows *283*
Niket S. Kaisare, Georgios D. Stefanidis, and Dionisios G. Vlachos
10.1 Introduction *283*
10.2 Spatial Gradients in Microchannels *284*
10.2.1 Axial Thermal Gradients *285*
10.2.2 Transverse External Thermal Gradients *287*
10.2.3 Transverse External Mass Transfer *287*
10.2.4 Internal Heat and Mass Transfer *288*
10.3 Thermal Radiation in Microchannels *289*
10.4 Transverse Heat and Mass Transfer Correlations *292*
10.5 Homogeneous Microburners *293*
10.5.1 Effect of Transverse Transport on Flame Stability *293*
10.5.2 Transverse Heat Transfer and Nusselt Number *295*
10.6 Catalytic Microreactors *296*
10.7 Conclusions *300*
References *301*

11 Fluid–Fluid and Fluid–Solid Mass Transfer *303*
Michiel T. Kreutzer and Axel Günther
11.1 Introduction *303*
11.1.1 Relevance *303*
11.1.2 Basics, Relevant Time Scales *304*
11.2 Stable Fluid Interfaces: Annular Flows and Falling Films *307*
11.3 Droplet/Bubble Segmented Flows *309*
11.3.1 Fluid–Fluid Mass Transfer Without Reaction at the Wall *311*

11.3.2 Continuous Phase to Wall Mass Transfer *313*
11.3.3 Disperse Phase to Wall Mass Transfer *314*
11.4 Complex Geometries – Packed Beds and Foams *317*
References *319*

Part IV Microstructured Devices for Purification and Separation Processes *323*

12 Extraction *325*
Nobuaki Aoki and Kazuhiro Mae
12.1 Introduction *325*
12.2 Parallel Flow of Two Immiscible Phases *325*
12.2.1 Instances of Extraction Systems and Devices Using Parallel Flow *326*
12.2.2 Surface Modification of Channel Geometry for Stabilizing Parallel Flow *329*
12.2.3 Application in Organic Synthesis *330*
12.3 Droplet Manipulation *331*
12.3.1 Devices for Continuous Generation of Dispersed Droplets *332*
12.3.2 Coalescence of Droplets in Dispersions *333*
12.3.3 Precise Operation of Individual Droplets *334*
12.4 Liquid–Liquid Slug Flow *336*
12.4.1 Extraction Process Based on Slug Flow *337*
12.4.2 Quantitative Study of Mass Transfer in Slug Flow *339*
12.4.3 Application of Mass Transfer in Slug Flow to Organic Synthesis *339*
12.5 Conclusion *341*
References *342*

13 Capillary Electrochromatography *347*
Hans-Joerg Bart
13.1 Introduction *347*
13.2 Theory *348*
13.3 Stationary Phases *353*
13.3.1 o-CEC Phases *354*
13.3.2 Granular Packed Columns *354*
13.3.3 Monolithic Phases *355*
13.4 Chip Electrochromatography *356*
13.5 Conclusions and Perspectives *358*
References *358*

Part V Microstructured Reactors *365*

14 Homogeneous Reactions *367*
Volker Hessel and Patrick Löb
14.1 Benefits *367*

14.1.1 Reaction Engineering Benefits *367*
14.1.2 Process Engineering Benefits *368*
14.2 Reactor Concepts – the Tools for Process Intensification *369*
14.2.1 Micromixers, Micro Heat Exchangers and Minitubes/Capillaries *369*
14.2.2 Integrated Reactors *370*
14.3 Reaction Optimization *371*
14.3.1 Process Parameters with Impact on Reactor Performance *371*
14.3.2 Residence Time Distribution *371*
14.3.2.1 RTD Studies on Liquid-phase Flows *372*
14.3.2.2 RTD Studies on Gas-phase Flows *374*
14.3.3 Impact of Mixing *375*
14.3.4 Impact of Heat Exchange *379*
14.3.5 Impact of Electromagnetic Waves and Alternative Energies *380*
14.4 Process Design *380*
14.4.1 Combined Reaction–Separation *380*
14.4.2 Multi-step Reactions *381*
14.5 Novel Process Windows *383*
14.5.1 High Temperatures – Rate Acceleration *384*
14.5.2 High Pressures – Transition State Volume Effects *385*
14.5.3 Solventless and Solvent-free Operation *385*
14.5.4 Exploration into Explosive and Thermal Runaway Regimes *386*
14.6 From Laboratory to Production Scale – Scale-out *387*
14.6.1 Numbering-up *387*
14.6.2 Internal Numbering-up or Equaling-up *387*
14.6.3 External Numbering-up: Device Parallelization *389*
14.6.4 Smart Scale-up *389*
14.6.5 Multi-scale Architecture *390*
References *390*

15 Heterogeneous Multiphase Reactions *395*
Madhvanand N. Kashid, David W. Agar, Albert Renken, and Lioubov Kiwi-Minsker
15.1 Introduction *395*
15.2 General Criteria for Reactor Choice and Design *397*
15.3 Fluid–Solid Reactors *398*
15.3.1 Pressure Drop *399*
15.3.2 Residence Time Distribution *400*
15.3.3 Mass Transfer and Chemical Reaction *404*
15.4 Fluid–Fluid Reactors *407*
15.4.1 Gas–Liquid Systems *407*
15.4.1.1 Pressure Drop *410*
15.4.1.2 Residence Time Distribution *413*
15.4.1.3 Mass Transfer and Film Saturation *416*
15.4.2 Liquid–Liquid Systems *418*
15.4.2.1 Pressure Drop *419*

15.4.2.2 Residence Time Distribution *421*
15.4.2.3 Chemical Reaction in Liquid–Liquid Systems *422*
15.5 Three-phase Reactions *424*
15.5.1 Gas–Liquid–Solid *424*
15.5.1.1 Continuous-phase Microstructured Reactors *427*
15.5.1.2 Dispersed-phase Microstructured Reactors *428*
15.5.2 Gas–Liquid–Liquid Systems *430*
15.6 Conclusion *431*
References *435*

16 Photoreactors *441*
Roger Gorges and Andreas Kirsch
16.1 Photochemical Reactions *441*
16.2 Single-phase Photochemical Reactions *442*
16.3 Multi-phase Photochemical Reactions *447*
16.4 Immobilized Photocatalysts *451*
16.5 Conclusion *455*
References *456*

17 Microstructured Reactors for Electrochemical Synthesis *459*
Sabine Rode and François Lapicque
17.1 Fundamentals of Electrochemical Processes *459*
17.1.1 Electrode Reaction Stoichiometries and Faraday's Law *460*
17.1.2 Electrode Potentials and Gibbs Free Energy Change of the Overall Reaction *461*
17.1.3 Kinetics and Mass Transfer Limitations of the Electrode Reaction *461*
17.1.4 Process Performance Criteria *462*
17.1.5 Specific Energy Consumption and Cell Voltage *463*
17.1.6 Ohmic Drop and Heat Generation *463*
17.2 Electrochemical Equipment and Process Flow Schemes *464*
17.2.1 Some Overall Process Options *464*
17.2.1.1 Divided and Undivided Cells *464*
17.2.1.2 Direct and Indirect Electrosynthesis *465*
17.2.1.3 Simple and Paired Electrosynthesis *465*
17.2.2 Typical Commercial Cells *465*
17.2.2.1 Tank Cells *465*
17.2.2.2 Filterpress-type Flow Cells *466*
17.2.2.3 Cells with Parallel Electrodes and a Millimeter or Submillimeter Inter-electrode Gap *466*
17.2.2.4 Cells with Non-parallel Dissymmetric Electrodes *467*
17.2.3 Process Flow Schemes *467*
17.3 Microreactors in Electrochemical Synthesis *468*
17.3.1 Process Intensification Mechanisms *469*
17.3.1.1 Enhancement of the Mass Transfer Rates *469*
17.3.1.2 Coupling of the Electrode Processes *469*

17.3.1.3 Reduction of the Ohmic Drop *469*
17.3.1.4 Operation in Single-pass High-conversion Mode *469*
17.3.2 Coplanar Interdigitated Microband Electrodes *470*
17.3.3 Plate and Channel Microreactors *471*
17.3.3.1 Reagent Flux and Applied Current *471*
17.3.3.2 Mass Transfer Limitations and Reagent Conversion *471*
17.3.3.3 Liquid–Solid Mass Transfer Coefficient and Coupling of the Electrode Processes *472*
17.3.3.4 Increase in the Space–Time Yield at a Constant Ohmic Penalty *473*
17.3.3.5 Experimental Investigations Reported in the Literature *473*
17.3.3.6 Reactor Model *476*
17.4 Conclusion and Outlook *477*
References *479*

Index *481*
